Overview

High-quality undergraduate STEM education is essential for preparing the diverse STEM workforce needed to sustain U.S. leadership in innovation.\(^1,2\) It is also essential for producing STEM-knowledgeable workers who can use STEM skills in business and industry, as well as a STEM-literate public that understands and benefits from STEM.\(^3\) Thus, the IUSE program aims to ensure that every college student in the United States has exceptional STEM learning opportunities.

To achieve this goal, the NSF-wide IUSE initiative supports research and development projects to improve undergraduate STEM education at multiple scales, ranging from individual STEM classrooms to nationwide systemic efforts. In addition, IUSE supports innovative undergraduate STEM education to prepare the STEM workforce in interdisciplinary areas, such as computational and data-enabled science and engineering. It also supports education in emerging fields such as AI and QIS. All IUSE projects include assessment components, and thus also contribute new knowledge about effective teaching and learning practices in undergraduate STEM education that can guide future innovations.

IUSE is one of NSF’s most flexible funding programs. In addition to supporting projects that have specific relevance to any NSF-supported discipline, it also supports projects that span all STEM disciplines. Examples of such cross-cutting efforts include incorporating active learning, institutional and community transformation, increasing access to undergraduate research experiences, and developing courses and instructional materials utilizing emerging technologies. This flexibility enables IUSE to respond rapidly to support emerging areas and Administration priorities. For example, in FY 2021, IUSE contributed to the Data Science Corps (DSC) program within the HDR Big Idea. HDR-DSC supports projects that engage a diverse cadre of students in solving data science challenges faced by communities, organizations, and governmental agencies. Thus, DSC leverages undergraduate data

---

science education in service to science and society, contributing to a strong national data science infrastructure and workforce. In FY 2021 IUSE launched a new initiative through the release of a program description, Advancing Innovation and Impact in Undergraduate STEM Education at Two-Year Institutions of Higher Education, which also seeks to support systemic approaches to advance inclusive and equitable STEM education practices at two-year colleges. With more than 1,000 two-year colleges enrolling over 11 million students, these institutions provide STEM education to a large population of students entering the STEM workforce and are critical to our STEM competitiveness. Among U.S. students who earned Science & Engineering bachelor's degrees between 2010 and 2017, about half (47 percent) had done some coursework at a community college and nearly a fifth (18 percent) earned associate degrees.

IUSE was initiated as a multi-year, NSF-wide priority investment area, originally spanning FY 2014 to FY 2020. The NSF 2018-2022 Strategic Plan extended the initiative through FY 2022, thus enabling NSF to support ongoing innovations to ensure the United States’ undergraduate STEM education enterprise remains current with advances in STEM and STEM education. However, NSF anticipates that IUSE will continue as the principal component of its undergraduate education strategies for the long term.

Goals

IUSE aims to support improvements in undergraduate STEM education across the Nation by funding research, development, and implementation efforts that will:

1. Improve Undergraduate STEM Learning and Learning Environments: Investments will build the knowledge base for innovative undergraduate STEM instruction.

2. Broaden Participation and Institutional Capacity for Undergraduate STEM Learning: Investments will increase the number and diversity of undergraduate students in STEM majors and career pathways and build the knowledge base for how to do so.

3. Build the STEM Workforce for Emerging Industries: Investments will advance the preparation of undergraduate students to be productive members of the future STEM and STEM-capable workforce.

FY 2023 Investments

As part of its mission to advance STEM, NSF plans to invest $108.65 million in IUSE in FY 2023. The IUSE initiative's anchor investment is made by IUSE/EDU, a program solicitation within EDU's Division of Undergraduate Education. IUSE/EDU supports research and development activities such as studying the use of inquiry-based and active learning approaches in undergraduate instruction, increasing undergraduate research experiences and courses, and research on the persistence and graduation of students in STEM programs. IUSE/EDU is complemented by five additional IUSE core programs, which share the three common IUSE goals listed in the previous section but have more specific funding goals than IUSE/EDU:

- EDU – IUSE: Hispanic Serving Institutions (HSI) Program: Supports improvements in retention and graduation rates at HSIs that have not received high levels of NSF support; approximately 40 awards.

---

Improving Undergraduate STEM Education

- **EDU – IUSE: Two Year Colleges (IUSE: TYC):** Supports STEM education initiatives which enhance STEM teaching and learning at two-year colleges; approximately 20 awards.
- **BIO – IUSE: Research Coordination Networks/Undergraduate Biology Education (RCN-UBE):** Supports collaborative networks to improve undergraduate biology education; approximately 15 awards.
- **ENG – IUSE/Professional Formation of Engineers: Revolutionizing Engineering Departments (IUSE/PFE:RED):** Supports organizational change strategies to transform undergraduate engineering education; approximately five to ten awards.
- **CISE – IUSE: Computing in Undergraduate Education (IUSE:CUE):** Supports collaborative partnerships to re-envision the role of computing in undergraduate education, leading to a larger, more diverse population of students with the computational skills necessary for careers in a broad range of fields; approximately six awards.

IUSE funding focuses on advancing the Nation's vision of an undergraduate STEM education enterprise in which every undergraduate becomes STEM-knowledgeable and all students who desire to pursue a STEM education that maximizes their full potential for a STEM career can do so.
