

Project Title: Administrative Datasets on NDCs: Creating and Analyzing a Repository

Awardee: George Washington University

Contract Number:

Award Type: R&D

Award Amount: \$500,000

Principal Investigator: Andrew Reamer

NSF Funding Program: National Center for Science and Engineering Statistics

NSF Program Director: Jennifer Sinibaldi, jsinibal@nsf.gov

Abstract:

The project aims to organize a repository of administrative/ non-survey datasets on nondegree credentials (NDCs), then assess the quality of those data. The research plan has four sequential tasks—landscape scan, quality assessments, data analysis, and a plan for continuation of the data repository. The two analyses are: 1. comparison of repository datasets with the first data output from the new National Training, Education, and Workforce Survey and 2. identification of possible new NCSES data series and indicators drawn from the auxiliary data repository.
