

Hopi E. Hoekstra. Alexander Agassiz Professor of Zoology, Departments of Organismic & Evolutionary Biology and Molecular & Cellular Biology and Curator of Mammals, Museum of Comparative Zoology, Harvard University. I received my B.A. in Integrative Biology from the University of California-Berkeley, and then my Ph.D. in Zoology from the University of Washington. I was a NIH NRSA Postdoctoral Fellow at the University of Arizona. In 2003, I became an Assistant Professor at UC San Diego before moving to Harvard in 2007. I am broadly interested in understanding how variation is generated and maintained in natural populations. While initially focused on the genetic basis of color adaptation, we now have expanded this work to other species and other fitness-related traits (e.g., reproductive traits and behavior). To this end, we use a variety of approaches -- from ecological experiments in the field to molecular and developmental genetics in the laboratory. My service contributions include: American Society of Naturalists Vice President (2011); Elected Council Member, European Society for Evolutionary Biology (2009-pres); Member, Faculty of 1000 (2009-pres); Elected Council Member, Society for the Study of Evolution (2009-pres); Elected Council Member, American Genetics Association (2008-2011); National Institutes of Health Grant Review Panel (2008-present); Associate Editor, *Evolution* (2007-2010); Science Advisory Board, National Evolutionary Synthesis Center (2007-2010); National Science Foundation Grant Review Panel (2005).
