**Submission Date and Time:** 12/12/2019 10:34:29 PM

This contribution was submitted to the National Science Foundation in response to a Request for Information, <https://www.nsf.gov/pubs/2020/nsf20015/nsf20015.jsp>. Consideration of this contribution in NSF's planning process and any NSF-provided public accessibility of this document does not constitute approval of the content by NSF or the US Government. The opinions and views expressed herein are those of the author(s) and do not necessarily reflect those of the NSF or the US Government. The content of this submission is protected by the Creative Commons Attribution-NonCommercial-NoDerivatives 4.0 International License (<https://creativecommons.org/licenses/by-nc-nd/4.0/legalcode>).

*Consent Statement:* "I hereby agree to give the National Science Foundation (NSF) the right to use this information for the purposes stated above and to display it on a publicly available website, consistent with the Creative Commons Attribution-NonCommercial-NoDerivatives 4.0 International License (<https://creativecommons.org/licenses/by-nc-nd/4.0/legalcode>)."

**Consent answer:** I consent to NSF's use and display of the submitted information.

#### **Author Names & Affiliations**

Submitting author: Izzat Alsmadi - Texas A&M, San Antonio

**Additional authors:** None

**Contact Email Address** (for NSF use only): (hidden)

#### **Research domain(s), discipline(s)/sub-discipline(s)**

Cyber analytics

#### **Title of Response**

Cyber analytics in social networks and big data

#### **Abstract**

Challenges in this research includes: How to acquire quality data, how to share and reuse quality data,

**Question 1 (maximum 400 words) – Data-Intensive Research Question(s) and Challenge(s).** Describe current or emerging data-intensive/data-driven S&E research challenge(s), providing context in terms of recent research activities and standing questions in the field. NSF is particularly interested in cross-disciplinary challenges that will drive requirements for cross-disciplinary and disciplinary-agnostic data-related CI.

I work different projects in the area of: Cyber analytics in social networks and big data. Dealing with large data is a challenge, how to clean, process and analyse such data

**Question 2 (maximum 600 words) – Data-Oriented CI Needed to Address the Research Question(s) and Challenge(s).** Considering the end-to-end scientific data-to-discovery (workflow) challenges, describe any limitations or absence of existing data-related CI capabilities and services, and/or specific technical and capacity advancements needed in data-related and other CI (e.g., advanced computing, data services, software infrastructure, applications, networking, cybersecurity) that must be addressed to accomplish the research question(s) and challenge(s) identified in Question 1. If possible, please also consider the required end-to-end structural, functional and performance characteristics for such CI services and capabilities. For instance, how can they respond to high levels of data heterogeneity, data integration and interoperability? To what degree can/should they be cross-disciplinary and domain-agnostic? What is required to promote ease of data discovery, publishing and access and delivery?

how to transfer and reuse knowledge and how to build continuous learning environments.

**Question 3 (maximum 300 words) – Other considerations.** Please discuss any other relevant aspects, such as organization, processes, learning and workforce development, access and sustainability, that need to be addressed; or any other issues more generally that NSF should consider.
