The Pathways into the Earth, Ocean, Polar and Atmospheric & Geospace Sciences (GEOPAths) program supports efforts in broadening participation to increase the number of students pursuing undergraduate or postgraduate degrees by forming STEM Learning Ecosystems that engage students in the study of the Earth, oceans, polar regions and atmosphere.

The Cultural Transformation in the Geoscience Community (CTGC) program supports efforts to reshape traditional geosciences points of entry and career pathways, by connecting individuals with academic training with informal and work-based training opportunities through career-pathway mapping and strong, collaborative relationships with a variety of diverse partners. CTGC emphasizes the need for diverse perspectives, and specifically aims to engage with institutions who support Black, Indigenous, People of Color (BIPOC), persons with disabilities, LGBTQIA+, and other individuals from marginalized/minoritized groups.

Important Upcoming Dates
GOLD: Target Date - October 28
GEOPAths: Full proposals accepted anytime
CTGC: More information soon!
