CONTENTS

Preface ......................................................................................................................... vii
Acknowledgments ........................................................................................................ ix
Executive Summary ...................................................................................................... 1
Process for Producing the Report .............................................................................. 5
Chapter One: Introduction ........................................................................................ 7
Chapter Two: The Global and Domestic Contexts .................................................... 11
Chapter Three: Findings and Recommendations ................................................... 17
  Undergraduate education in science and engineering ......................................... 17
  Advanced education in science and engineering ................................................. 21
  Knowledge base on the science and engineering workforce .............................. 28
  Precollege teaching workforce for mathematics, science and technology ....... 31
  US engagement in the international science and engineering workforce .......... 36
Chapter Four: Conclusion ......................................................................................... 41
Selected Bibliography ............................................................................................... 43
Appendices .................................................................................................................. 47

I. Charge: Committee on Education and Human Resources,
   Task Force on National Workforce Policies for Science and Engineering ....... 48

II. Agenda: EHR Task Force on National Workforce Policies for
    Science and Engineering (NWP) Task Force Briefing, January 30, 2001 .... 50

III. Agenda: Workshop I on National Policy Options, Task Force on National
    Workforce Policies for Science and Engineering, March 12, 2002 ............ 52

IV. Agenda: Workshop II on National Policy Options, Task Force on National
    Workforce Policies for Science and Engineering. June 28, 2002............. 54

V. State of Knowledge on the Flow of Foreign Science and Technology
   Workers to the United States, Executive Summary ....................................... 56
VI. Public Comments: Organizations and Individuals .................................................. 58

VIII. Selected Acronyms and Abbreviations ............................................................. 77

FIGURES

1. Bachelor’s degrees in selected S&E fields by US citizens and permanent residents: Selected Years, 1977 - 2000 .............................................................. 8

3. Ratio of NS&E First University Degrees to 24-year-old Population, 1975 and 1999 ................................................................. 13

TABLES

2. Participation Rate in Natural Sciences and Engineering Bachelor’s Degrees in 1998 ................................................................. 15

BOXES

A. Defining the Science and Engineering Workforce ............................................... 6

C. The Federal Role in Graduate and Postdoctoral Education (1997) ................. 26, 27

D. Selected Sources Identifying Issues in Attracting and Retaining Precollege Science and Mathematics Teachers ........................................ 33

E. Preparing Our Children/Math and Science Education in the National Interest (1999) .......................................................... 34, 35

F. Toward a More Effective Role for the US Government in International Science and Engineering ........................................................ 38, 39

SIDEBARS

Forecasting Demand and Supply. Reference: National Research Council, Forecasting Demand and Supply of Doctoral Scientists and Engineers: Report of a Workshop on Methodology .................................................. 10
