The NSF STC Management Team, led by the Lead Program Official, will negotiate the date for each site visit with the principal investigator of the Center. Each site visit is to take place at least three to four weeks prior to the end of each performance period in order for funding decisions to be made and the processing of NSF paperwork to take place. The Site Visit Team will consist of external experts in the scientific and/or engineering areas that are the foci of the Center, as well as knowledge transfer, diversity, and education. The Site Visit Team will write and submit to NSF and the principal investigator a report on the Center. The site visit evaluation (Critical Site Visit) held in the fourth year of the award will consist of ad hoc mail reviews of the Center and a formal, on-site review with external experts who will produce a written report and submit it to NSF and the principal investigator. This review will determine whether the Center will receive funding in years six through ten or whether it will phase out in year five.

The awardee will meet, as necessary, with NSF staff to review operations of the Center and to exchange views, ideas, and information concerning the Center.

¹ The August 1 to July 31 dates are to be used by those Centers that have effective start dates of August 1, and the July 1 to June 30 dates are to be used by those Centers that have effective start dates of July 1.
Also, NSF may request Special Reports from the awardee. The awardee is required to submit those reports following instructions provided at the time by NSF.

No Center will be funded with STC funding for more than ten years.

Continuation of NSF support will depend upon an annual evaluation of progress, accomplishments, and availability of funds. Annual evaluations will include site visits with external reviewers who will produce a written report. All facets of the STC will be evaluated. Examination of an STC’s adherence to its diversity plan, and making the STC and its subawardees accountable for results, will be a prominent part of the annual site visits. The annual progress report will provide much of the information required for the annual evaluation. NSF will have a consultant interact with the appropriate STC personnel to obtain the additional information if needed. NSF will give appropriate notice to the STC in case of any change in the time or type of review. In addition, the Awardee will meet, as necessary, with NSF staff to review operations of the Center and to exchange views, ideas, and information concerning the Center. Additional details follow.

1. Funding: The funding amount for each year is provided in the Cooperative Agreement to which the Lead Institution and NSF have agreed.

2. Funding Schedule: The level of continued NSF support will be negotiated with the Awardee annually. Continuation of NSF support will depend upon an annual evaluation of scientific progress, accomplishments, and the availability of funds. The annual progress report, submitted by the Center, will provide much of the information required for this evaluation. Annual evaluations will include site visits with external reviewers who will produce a written report. A summary of the site visit schedule for each year is provided in the preceding section. In the event that the anticipated level of NSF support cannot be awarded because of budgetary constraints, NSF and the Awardee will negotiate a change in the scope of Center activities.

3. Review of Renewal Proposal: The Center must submit a renewal proposal by October 1, 2009, in the fourth year of current support, for consideration of continued NSF support for the five-year period beginning July 1, 2011 or August 1, 2011. After receipt of the renewal proposal, NSF will conduct an in-depth review of the Center to determine whether NSF will continue to support full Center operations for another five-year period or will provide decreased funding to phase out NSF support of the Center over the remaining one year (July 1, 2010 to June 30, 2011 or August 1, 2010 to July 31, 2011) of the Cooperative Agreement. This review will consist of ad hoc mail reviews and a formal, on-site review with external reviewers who will produce a written report. NSF will endeavor to provide notification of the decision for renewed support no later than June 1, 2010 if the start date is July 1st or July 1, 2010 if the start date is August 1st, but a delay in notification is not to be interpreted that an award will or will not be made.

If, as a result of the fourth-year review, NSF renews support for the Center, the five-year Cooperative Agreement will be amended to include an additional five years of support, at levels to be negotiated at that time, commencing at the beginning of the sixth year, effective either July 1, 2011 or August 1, 2011. The amendment to the Cooperative Agreement will include a specifically planned two-year phase-out period for NSF support of the Center during its final two years of operation. The Center will continue to be monitored at least every 18 months during its second five-year period of support. NSF will support the Center for a maximum of ten years.

If, as a result of the fourth-year review, continued Center operation is not recommended, NSF will provide a decreased level of funding (at 75% of the levels for the fourth year) to phase out NSF support over the remaining one year of the Cooperative Agreement.
The decision to renew or phase out funding will be based on the following merit review criteria from the *Science and Technology Centers (STC): Integrative Partnerships Program Solicitation* (NSF 03-550):

a. the progress made by the Center in accomplishing the goals articulated in its Strategic and Implementation Plan and other relevant documents as measured by the performance and management indicators;

b. intellectual merit and importance of the Center’s activities in advancing knowledge and understanding within its own field or across different fields; research accomplishments and performance of the Center team; creativity and originality in exploring concepts;

c. broader impacts of the Center’s activities in advancing discovery and understanding while promoting teaching, training, and learning; the Center’s record of broadening the participation of underrepresented groups (e.g., gender, race/ethnicity, disability, geographic); the Center’s enhancement of the infrastructure for research and education, such as facilities, instrumentation, networks, and partnerships; broad dissemination of results to enhance scientific and technological understanding; benefits of the proposed activity to society;

d. value added by the Center in stimulating interdisciplinary or multidisciplinary interaction and/or collaboration across a novel research area; relationship to existing and planned institutional programs and capabilities in research and education; institutional, national, and international impact in research and education;

e. integrating research and education, including effective educational programs that broaden the career paths of involved students; fostering a climate of interaction and effective knowledge transfer both among diverse university departments and between the university and its partners in academia, industry, and/or other sectors;

f. developing human resources, including increased participation by U.S. citizens, particularly women and underrepresented minorities and persons with disabilities in research and education; formation of substantive and long-term partnerships and collaborations with minority-serving institutions and/or women’s colleges;

g. partnerships and knowledge transfer including the development of trusted partnerships and active collaboration with industry, public, and/or international sectors; stimulation and facilitation of knowledge transfer and strengthening the linkages between university-based research and its application and implementation;

h. shared experimental facilities (when appropriate), including the development, establishment, operation, and maintenance of new instrumentation or shared experimental facilities (including databases); provision of appropriate access to users from the home institution, other academic institutions, and other sectors;

i. leadership, management plan, institutional support, and budget, including the vision, experience, and capacity of the Center Director and the Center leadership team in managing a complex, multi-faceted, and innovative research, education, and knowledge-transfer enterprise; effectiveness of the management plan, including the mechanisms for topic selection, resource allocation, evaluation of progress, and project termination; documentation of institutional and other commitments to the Center; appropriateness of the budget.
Accordingly, the Center Director will develop and maintain a system of management and performance indicators to be used in determining the overall effectiveness of the Center, based on the above criteria.

5. Cost Sharing: In addition to the conditions of GC-1, Article 22 found at http://www.nsf.gov/pubs/2002/gc102/gc102.pdf, the following applies:

   As a condition of this award, the Awardee agrees to provide cost sharing as specified in its proposal or subsequent approved revised version of the proposal.

   While it is understood that the cooperating partners will contribute significantly to this cost sharing, the Awardee is responsible for satisfying the cost-sharing obligation. Recognizing that some amounts are directly related to faculty recruitment by the awardee and the subawardees, such cost sharing obligations will be considered fulfilled if undertaken during any of the five years of the award.

   No Federal funds may be used to meet the Awardee’s cost sharing obligation for the Center. Acceptable forms of cost sharing contributions are those that meet the criteria established in Section 23 of OMB Circular A-110 (http://www.whitehouse.gov/omb/circulars/a110/a110.html#23).

REPORTING REQUIREMENTS

For reporting requirements, see http://www.nsf.gov/od/oia/programs/stc/documents.jsp.

Pursuant to 5 CFR 1320.5(b), an agency may not conduct or sponsor, and a person is not required to respond to an information collection unless it displays a valid OMB control number. The OMB control number for this collection is 3145-0194. Public reporting burden for this collection of information is estimated to average 100 hours per response, including the time for reviewing instructions. Send comments regarding this burden estimate and any other aspect of this collection of information, including suggestions for reducing this burden, to: Suzanne Plimpton, Reports Clearance Officer, Division of Administrative Services, National Science Foundation, Arlington, VA  22230.
