“Responsibility for preparing our children, and indeed our country, to thrive in the 21st century world extends far beyond the classroom. We know that we must ensure that America’s children are well prepared for the scientific and technological opportunities and challenges of the future.”

With an eye on the future, the Math and Science Partnership Program concentrates the power and expertise of higher education institutions, K-12 school systems, and businesses across the country in a research and development effort to improve our students’ mathematics and science achievement.”

– Dr. Arden L. Bement, Director, National Science Foundation
