

Historically Black Colleges and Universities Undergraduate Program (HBCU-UP)

PROGRAM SOLICITATION NSF 12-519

REPLACES DOCUMENT(S): NSF 11-519

National Science Foundation

Directorate for Education & Human Resources
Division of Human Resource Development

Letter of Intent Due Date(s) (*required*) (due by 5 p.m. proposer's local time):

January 20, 2012

Letters of Intent are required for Targeted Infusion Projects, Implementation Projects, Achieving Competitive Excellence (ACE) Implementation Projects

Full Proposal Deadline(s) (due by 5 p.m. proposer's local time):

March 12, 2012

Targeted Infusion Projects, Broadening Participation Research Projects, Research Initiation Awards, Implementation Projects, Achieving Competitive Excellence (ACE) Implementation Projects

Submission Window Date(s) (due by 5 p.m. proposer's local time):

January 12, 2012 - July 12, 2012

HRD Design Project Proposals for a Broadening Participation in STEM Resource Network

IMPORTANT INFORMATION AND REVISION NOTES

This solicitation includes a special call for design proposals that will lead to the development of a Broadening Participation in STEM Resource Network (BPS-Resource Network). The purpose of the BPS-Resource Network will be to assist all HRD grantees as well as other NSF stakeholders in achieving the performance goal in the NSF Strategic Plan for 2011-2016 to "Prepare and engage a diverse STEM workforce motivated to participate at the frontiers." Design project proposals are encouraged from all eligible NSF proposers. The scope of the BPS-Resource Network design proposals should **not** be limited to the HBCU-UP program goal.

HBCU-UP encourages the submission of innovative projects that offer solutions to the severe underrepresentation of African-American students in physics, astronomy, and the geosciences at the undergraduate level, as well as address the problem of the vanishing number of departments offering baccalaureate degrees at HBCUs in these fields. Proposals may be submitted as solicited proposals in the available tracks or as unsolicited proposals, if they fall outside of the scope of the track.

Important Reminders

A revised version of the *NSF Proposal & Award Policies & Procedures Guide* (PAPPG), [NSF 11-1](#), was issued on October 1, 2010 and is effective for proposals submitted, or due, on or after January 18, 2011. Please be advised that the guidelines contained in [NSF 11-1](#) apply to proposals submitted in response to this funding opportunity.

Cost Sharing: The PAPPG has been revised to implement the National Science Board's recommendations regarding cost sharing. Inclusion of voluntary committed cost sharing is prohibited. In order to assess the scope of the project, all organizational resources necessary for the project must be described in the Facilities, Equipment and Other Resources section of the proposal. The description should be narrative in nature and must not include any quantifiable financial information. Mandatory cost sharing will only be required when explicitly authorized by the NSF Director. See the PAPP Guide Part I: *Grant Proposal Guide (GPG) Chapter II.C.2.g(xi)* for further information about the implementation of these recommendations.

Data Management Plan: The PAPPG contains a clarification of NSF's long standing data policy. All proposals must describe plans for data management and sharing of the products of research, or assert the absence of the need for such plans. FastLane will not permit submission of a proposal that is missing a Data Management Plan. The Data Management Plan will be reviewed as part of the intellectual merit or broader impacts of the proposal, or both, as appropriate. Links to data management requirements and plans relevant to specific Directorates, Offices, Divisions, Programs, or other NSF units are available on the NSF website at: <http://www.nsf.gov/bfa/dias/policy/dmp.jsp>. See [Chapter II.C.2.j](#) of the GPG for further information about the implementation of this requirement.

Postdoctoral Researcher Mentoring Plan: As a reminder, each proposal that requests funding to support postdoctoral researchers must include, as a supplementary document, a description of the mentoring activities that will be provided for such individuals. Please be advised that if required, FastLane will not permit submission of a proposal that is missing a Postdoctoral Researcher Mentoring Plan. See [Chapter II.C.2.j](#) of the GPG for further information about the implementation of this requirement.

SUMMARY OF PROGRAM REQUIREMENTS

General Information

Program Title:

Historically Black Colleges and Universities - Undergraduate Program (HBCU-UP)

Synopsis of Program:

Historically Black Colleges and Universities (HBCUs) have awarded a large share of bachelor's degrees to African American students in science, technology, engineering and mathematics (STEM), and the top ten baccalaureate institutions of African American STEM doctorate recipients from 2002-2006 are HBCUs. [1] To meet the nation's accelerating demands for STEM talent, more rapid gains in achievement, success and degree production in STEM for underrepresented minority populations are needed. The Historically Black Colleges and Universities Undergraduate Program (HBCU-UP) is committed to enhancing the quality of undergraduate STEM education and research at HBCUs as a means to broaden participation in the nation's STEM workforce. To this end, HBCU-UP provides awards to develop, implement, and study innovative models and approaches for making dramatic improvements in the preparation and success of HBCU undergraduate students so that they may participate successfully in STEM graduate programs and/or careers in STEM disciplines. Support is available for Targeted Infusion Projects, Broadening Participation Research Projects, Research Initiation Awards, Implementation Projects and Achieving Competitive Excellence Implementation Projects, as well as other funding opportunities.

Targeted Infusion Projects (TIP) provide support to achieve a short-term, well-defined goal to innovate or improve the quality of undergraduate STEM education at HBCUs. Targeted Infusion Projects could create or adapt innovative learning experiences and pedagogies in STEM fields. Projects could develop creative uses of cyberlearning, specifically learning with cyberinfrastructure tools. Projects could enhance academic infrastructure by updating curriculum, modernizing laboratory research equipment, or improving the computational network array for research and education. Projects could enhance existing degree programs, establish new degree programs or concentrations, secure specialized accreditation or certification, or infuse STEM programs with disciplinary field advances and evolving workforce requirements. Projects that develop faculty expertise, promote implementation of educational innovations, or link to the preparation of future K-12 teachers are encouraged. Projects should be guided by research on teaching and learning.

The **Broadening Participation Research (BPR)** in STEM Education track provides support to research projects that seek to create and study new theory-driven models and innovations related to the participation and success of diverse groups in STEM undergraduate education. BPR projects add new research-based strategies and models to broadening participation in STEM and increase the capacity of scholars at Historically Black Universities and Colleges to conduct this type of research.

Research Initiation Awards (RIA) provide support for a STEM faculty member at the HBCU to pursue research at the home institution, at an NSF-funded research Center, at a research intensive institution, or at a national laboratory. Awards are intended to help further the faculty member's research capability and effectiveness, to improve research and education at his or her home institution, and to involve undergraduate students in research experiences. Research Initiation Awards are for junior faculty who are starting to build a research program, as well as for mid-career faculty who may have returned to the faculty ranks after holding an administrative post or who for some other reason need to redirect and rebuild a research program. Faculty members who hold an active Federal research award are not eligible for the Research Initiation Award.

Implementation Projects provide support to design, implement, study, and assess comprehensive institutional efforts to increase the numbers of students and the quality of their preparation by strengthening STEM education and research. Implementation projects create and/or adapt and assess innovative models and materials for teaching and learning in STEM, embody knowledge about how students learn most effectively in STEM teaching and learning activities, and bring STEM disciplinary advances into the undergraduate experience.

Within this track, **Achieving Competitive Excellence (ACE) Implementation Projects** are intended for HBCUs with exemplary achievements and established institutionalized foundations from previous Implementation Project grants. ACE seeks ambitious, potentially transformative proposals that have the promise of significant advances in STEM undergraduate education at the institution.

Other funding opportunities include: Conferences, Symposia, and Workshops; EARly-concept Grants for Exploratory Research (EAGER) and Grants for Rapid Response Research (RAPID); as well as Grant Supplements for existing awards. Additionally, PIs are invited to seek supplemental support from NSF for their participating students and faculty who are accepted as participants in one of four Department of Energy initiatives: Science Undergraduate Laboratory Internships (SULI), Faculty-Student Teams (FaST), Community College Institutes (CCI), and Pre-Service Teacher (PST) Internships. These initiatives are intended to support the research opportunities in DoE national laboratories during the summer. Planning Grants for institutional STEM self-analysis and action planning which lead to an HBCU-UP proposal submission may be submitted as unsolicited proposals.

Division of Human Resource Development (HRD) Special Call for Proposals

BPS-Resource Network: This solicitation includes a special call for design proposals that will lead to the development of a Broadening Participation in STEM Resource Network (BPS-Resource Network). The purpose of the BPS-Resource Network will be to assist all HRD grantees as well as other NSF stakeholders in achieving the performance goal in the NSF Strategic Plan for 2011-2016 to "Prepare and engage a diverse STEM workforce motivated to participate at the frontiers." Design project proposals are encouraged from all eligible NSF proposers. The scope of the BPS-Resource Network design proposals should **not** be limited to the HBCU-UP program goal.

Cognizant Program Officer(s):

Please note that the following information is current at the time of publishing. See program website for any updates to the points of contact.

- Claudia Rankins, Program Director, 815N, telephone: (703) 292-8109, fax: (703) 292-9018, email: crankins@nsf.gov
- Toni Edquist, Program Specialist, telephone: (703)-292-4649, email: tedquist@nsf.gov
- Danielle Kittrell, Science Assistant, 815N, telephone: (703)-292-4448, email: dkittrel@nsf.gov

Applicable Catalog of Federal Domestic Assistance (CFDA) Number(s):

- 47.076 --- Education and Human Resources

Award Information

Anticipated Type of Award: Standard Grant or Continuing Grant

Estimated Number of Awards: 44 - In FY 2012, up to 15 Targeted Infusion Projects, up to 5 Broadening Participation Research Projects, up to 15 Research Initiation Awards, up to 7 Implementation Projects, and up to 2 ACE Implementation Projects.

Anticipated Funding Amount: \$14,700,000

- Approximately \$14.7 million in FY 2012 for new HBCU-UP awards pending the availability of funds.

Please refer to Section II, Program Description, for information about the HRD special call for BPS-Resource Network proposals.

Eligibility Information

Organization Limit:

Proposals may only be submitted by the following:

- **HBCU-UP Proposals:** Historically Black Colleges and Universities (HBCUs) that are accredited and offer undergraduate educational programs in science, technology, engineering and mathematics (STEM).
- **BPS-Resource Network Proposals:** No limit; the categories of proposers eligible to submit proposals to the National Science Foundation are identified in the [Grant Proposal Guide](#), Chapter I, Section E.

PI Limit:

- The Principal Investigator for a **Targeted Infusion Project** should be the individual who will be involved in the implementation of the project activities.
- The Principal Investigator for a **Broadening Participation Research Project** should be one of the individuals who will perform the research. Other potential co-Principal Investigators include collaborators on the research project. At least one of the Principal Investigators must have experience in education or social science research.
- The Principal Investigator for a **Research Initiation Award** should be a faculty member in a STEM area at the HBCU. Co-Principal Investigators and senior personnel are not permitted.
- The Principal Investigator and co-Principal Investigators for the **Implementation Project and ACE Implementation Project** proposals should be the key personnel that will be involved in the implementation of the project.
- **BPS-Resource Network proposals:** No limit

Limit on Number of Proposals per Organization:

- **HBCU-UP Proposals:** An eligible institution can only have one active implementation award - Implementation Project or ACE Implementation Project.
- **BPS-Resource Network:** No limit

Limit on Number of Proposals per PI:

None Specified

Proposal Preparation and Submission Instructions

A. Proposal Preparation Instructions

- **Letters of Intent:** Submission of Letters of Intent is required. Please see the full text of this solicitation for further information.
- **Preliminary Proposal Submission:** Not Applicable
- **Full Proposals:**
 - Full Proposals submitted via FastLane: NSF Proposal and Award Policies and Procedures Guide, Part I: Grant Proposal Guide (GPG) Guidelines apply. The complete text of the GPG is available electronically on the NSF website at: http://www.nsf.gov/publications/pub_summ.jsp?ods_key=gpg.
 - Full Proposals submitted via Grants.gov: NSF Grants.gov Application Guide: A Guide for the Preparation and Submission of NSF Applications via Grants.gov Guidelines apply (Note: The NSF Grants.gov Application Guide is available on the Grants.gov website and on the NSF website at: http://www.nsf.gov/publications/pub_summ.jsp?ods_key=grantsgovguide)

B. Budgetary Information

- **Cost Sharing Requirements:** Inclusion of voluntary committed cost sharing is prohibited.
- **Indirect Cost (F&A) Limitations:** Not Applicable
- **Other Budgetary Limitations:** Other budgetary limitations apply. Please see the full text of this solicitation for further information.

C. Due Dates

- **Letter of Intent Due Date(s) (required)** (due by 5 p.m. proposer's local time):

January 20, 2012

Letters of Intent are required for Targeted Infusion Projects, Implementation Projects, Achieving Competitive Excellence (ACE) Implementation Projects

- **Full Proposal Deadline(s)** (due by 5 p.m. proposer's local time):

March 12, 2012

Targeted Infusion Projects, Broadening Participation Research Projects, Research Initiation Awards, Implementation Projects, Achieving Competitive Excellence (ACE) Implementation Projects

- **Submission Window Date(s)** (due by 5 p.m. proposer's local time):

January 12, 2012 - July 12, 2012

HRD Design Project Proposals for a Broadening Participation in STEM Resource Network

Proposal Review Information Criteria

Merit Review Criteria: National Science Board approved criteria. Additional merit review considerations apply. Please see the full text of this solicitation for further information.

Award Administration Information

Award Conditions: Additional award conditions apply. Please see the full text of this solicitation for further information.

Reporting Requirements: Standard NSF reporting requirements apply.

I. INTRODUCTION

The Historically Black Colleges and Universities Undergraduate Program (HBCU-UP) is a program in the Division of Human Resource Development (HRD), which is part of the Directorate for Education and Human Resources (EHR) of the National Science Foundation.

The National Science Foundation (NSF) supports research at the frontiers of knowledge, across all fields of science, technology, engineering, and mathematics (STEM) and all levels of STEM education. The NSF enables innovation and discovery in science, technology, engineering, and mathematics by educating and preparing a diverse and able STEM workforce who are motivated and prepared to participate at the frontiers of science. NSF is committed to reaching across society to ensure that the rich diversity of the nation's cultures is well represented in the STEM workforce and that individuals engaged in STEM fields are trained to participate fully in the global research enterprise.

The Directorate for Education and Human Resources

The mission of EHR is to achieve excellence in U.S. STEM education at all levels and in all settings (both formal and informal) in order to support the development of a diverse and well-prepared workforce of scientists, technicians, engineers, mathematicians and educators and a well-informed citizenry that has access to the ideas and tools of science and engineering. Specific EHR goals are:

1. Prepare the next generation of STEM professionals and attract and retain more Americans to STEM careers.
2. Develop a robust research community that can conduct rigorous research and evaluation that will support excellence in STEM education and that integrates research and education.
3. Increase the technological, scientific and quantitative literacy of all Americans so that they can exercise responsible citizenship and live productive lives in an increasingly technological society.
4. Broaden participation (individuals, geographic regions, types of institutions, STEM disciplines) and close achievement gaps in all STEM fields.

The Division of Human Resource Development

The Division of Human Resource Development (HRD) serves as a focal point for NSF's agency-wide commitment to enhancing the quality and excellence of STEM education and research through broadening participation by historically underrepresented groups - minorities, women, and persons with disabilities. HRD envisions a well-prepared and competitive U.S. workforce of scientists, technologists, engineers, mathematicians, and educators that reflects the diversity of the U.S. population. HRD's mission is to grow the innovative and competitive U.S. STEM workforce that is vital for sustaining and advancing the nation's prosperity by supporting the broader participation and success of individuals currently underrepresented in STEM and the institutions that serve them.

HRD has three strategic goals:

- **Knowledge Building:** The creation of new knowledge, innovations, and models for broadening participation in the STEM enterprise.
- **Knowledge Utilization:** The translation of knowledge, innovations, and models for broadening participation in STEM for use by stakeholders.
- **Expand Opportunities:** The expansion of stakeholder capacity to support and engage diverse populations in high quality STEM education and research programs.

The HRD Theory of Change

HRD's fundamental mission of broadening participation in STEM is embedded in the greater EHR and NSF goals. A basic premise of all HRD programs is that increasing the successful participation of individuals from historically underrepresented groups in STEM will result in a diverse, highly capable STEM workforce that can lead innovation and sustain U. S. competitiveness in the science and engineering enterprise. Therefore, HRD has an overall goal to increase the successful participation of underrepresented minorities, women and girls, and persons with disabilities in STEM. This is done through the implementation and testing of evidence-based practices, critical review of program results to assess impact, data-driven continuous improvement, and broad dissemination of program findings for wide adoption or scale-up of effective strategies.

The Historically Black Colleges and Universities Undergraduate Program (HBCU-UP) is committed to enhancing the quality of undergraduate STEM education and research at Historically Black Colleges and Universities (HBCUs) as a means to broaden participation in the nation's STEM workforce. HBCU-UP realizes this purpose by providing awards to develop, implement, and study innovative models and approaches for making dramatic improvements in the preparation and success of HBCU undergraduate students so that they may participate successfully in graduate programs and/or careers in STEM disciplines.

In alignment with the goals of the Directorate for Education and Human Resources and the Division of Human Resource Development, HBCU-UP is particularly interested in building knowledge in areas related to the following questions:

- What are the underlying issues affecting the differential participation and graduation rates in STEM undergraduate education of African-American students?
- What are effective strategies for improving STEM education in HBCUs? How can these strategies be translated to other institutions?
- What replicable models of successful STEM programs at HBCUs can be developed, described and adopted by other HBCUs and other institutions that serve underrepresented minority students?
- What are effective methods of increasing the capacity of HBCUs to produce more STEM graduates who are highly qualified for the STEM workforce or graduate school?
- What models of collaborations and partnerships that include HBCUs have the greatest short- and long-term positive impact for the HBCU institution, faculty, and/or students?

In addition, HBCU-UP has identified the following priorities: innovation in instruction and curriculum development; providing access to exciting STEM research experiences for undergraduate students; focusing on recruitment and retention, especially retention in STEM fields after the freshman year; critical transitions from K-12 to undergraduate, 2 year to 4 year, and undergraduate to graduate experiences. Improving student performance in science and mathematics in the U.S. requires an adequate supply of well-qualified STEM teachers [1], [2]. HBCU-UP encourages projects that address STEM teacher preparation to help increase the number and quality of future science and mathematics teachers.

According to a 2009 NSF report [3], in 2006, 213 (3.9%) of the Bachelor's degrees in physics, astronomy and other physical sciences in the U.S. were awarded to black students. Of these, 86 (40.4%) were awarded at the approximately 35 HBCUs that offered baccalaureate degrees in those fields. The number of HBCUs that offer bachelor's degrees in physics has since fallen to about 30. For the earth, atmospheric and ocean sciences, 58 (1.5%) of the Bachelor's degrees in 2006 were awarded to black students, with 6 (10.3%) being awarded at the few HBCUs that offer degrees in those fields. HBCU-UP encourages the submission of innovative projects that offer solutions to the severe underrepresentation of black students in these fields at the undergraduate level, as well as address the problem of the vanishing number of departments offering baccalaureate degrees at HBCUs in physics and geoscience. Proposals may be submitted as solicited proposals in the available tracks or as unsolicited proposals, if they fall outside of the scope of the track.

HBCU-UP's priorities are in alignment with findings and recommendations in some recently published reports. "Expanding Underrepresented Minority Participation: America's Science and Technology Talent at the Crossroads" [4] explores the role of diversity in the STEM workforce and its value in keeping America innovative and competitive. "Rising Above the Gathering Storm, Revisited: Rapidly Approaching Category 5" [5], provides a snapshot of the work of the government and the private sector in recent years, analyzing how the original recommendations have or have not been acted upon, what consequences this may have on future competitiveness, and priorities going forward.

II. PROGRAM DESCRIPTION

Historically Black Colleges and Universities (HBCUs) have awarded a large share of bachelor's degrees to African American students in science, technology, engineering and mathematics (STEM) and HBCUs are the baccalaureate origins of one-quarter to one-third of black science and engineering (S&E) doctorate recipients. To meet the nation's accelerating demands for STEM talent, more rapid gains in STEM for underrepresented minority populations are needed. The Historically Black Colleges and Universities Undergraduate Program (HBCU-UP) provides awards to develop, implement, and study innovative models and approaches to make dramatic improvements in the preparation and success of underrepresented minority students to participate in the S&E enterprise. Support is available for Targeted Infusion Projects, Broadening Participation Research Projects, Research Initiation Awards, Implementation Projects/Achieving Competitive Excellence Implementation Projects, and other funding opportunities.

1. TARGETED INFUSION PROJECTS: Projects of two to three years targeted to meet a short-term, well-defined goal to improve the quality of and make innovations in undergraduate STEM education.

Targeted Infusion Projects could create or adapt innovative learning experiences and pedagogies in STEM fields. Projects could develop creative uses of cyberlearning, specifically learning with cyberinfrastructure tools. Projects could enhance academic infrastructure by updating curriculum, modernizing laboratory research equipment, or improving the computational network array for research and education. Projects could enhance existing degree programs, establish new degree programs or concentrations, secure specialized accreditation or certification, or infuse STEM programs with disciplinary field advances and evolving workforce requirements. Projects that develop faculty expertise, promote implementation of educational innovations, or link to the preparation of future K-12 teachers are encouraged. Projects should be guided by research on teaching and learning.

Competitive proposals will describe clearly the innovation in undergraduate STEM education the project will realize. Appropriate short-term goals should be easily measurable and attainable within the project time frame, and appropriate metrics should be identified. The proposal also should include activities for dissemination of project results.

Proposals that include normal operating activities such as salaries to teach existing classes and normal recruitment and outreach activities will not be funded. TIP proposals are not supplements to existing HBCU-UP projects. HBCUs need not have an Implementation Project in order to submit TIP proposals. HBCUs that currently have a five-year Implementation Project will need to explain how the Targeted Infusion Project differs from the Implementation Project activities, and how the HBCU-UP funded projects will be leveraged, integrated, or synergized to produce greater outcomes that could not be achieved separately.

2. BROADENING PARTICIPATION RESEARCH IN STEM EDUCATION PROJECTS: Projects of up to three years to conduct a research investigation.

The Broadening Participation Research in STEM Education track exists across HRD programs and may be found in the following solicitations: Louis Stokes Alliances for Minority Participation (LSAMP); Historically Black Colleges and Universities Undergraduate Program (HBCU-UP); Research in Disabilities Education (RDE); Research on Gender in Science and Engineering (GSE); and Tribal Colleges and Universities Program (TCUP). Priorities and restrictions on study populations and awardee institutions may apply depending on the HRD program to which the proposal is submitted. The goal of this track across programs in the Division of Human Resource Development is to enhance our understanding of the underlying issues affecting the differential participation and success rates of students from underrepresented groups in STEM.

HBCU-UP Broadening Participation Research (BPR) in STEM Education proposals should be designed to create and study new models and innovations in STEM teaching and learning; enhance the understanding of the underlying issues affecting the differential participation and success rates of students from underrepresented groups; add to the research knowledge; and inform STEM education practices and interventions. Broadening Participation Research proposals should describe evidence-based research studies that contribute to understanding the participation of and successful outcomes for underrepresented groups in STEM. Proposals should consider new evidence-based strategies and practices and institutional structure models for broadening participation in STEM and increasing the capacity of scholars in minority-serving institutions to conduct this type of research.

Proposed research may investigate behavioral, cognitive, affective, learning and social differences as well as organizational, institutional or systemic processes that may impact participation and success in STEM education. Successful proposals will be grounded in appropriate theory and incorporate recent innovations and advances in research methodologies, conceptual frameworks and/or data gathering and analytic techniques. Proposals should reflect relevant advances in quantitative, qualitative, and mixed-methods research and evaluation methodologies and provide a compelling argument about how the methodologies proposed are appropriately matched with the strategic research questions of the project. Additionally, proposals should demonstrate how the methods chosen would result in rigorous, cumulative, reproducible, and usable findings to merit peer-review and publication.

Broadening Participation Research proposals must include PIs with demonstrable expertise in education research and/or social science research methods in addition to PIs with knowledge about STEM programs at HBCUs. Proposers are encouraged to establish collaborations to strengthen the research project and to describe in the proposal the nature of the collaboration and the anticipated benefits. As appropriate, proposals should describe mechanisms to effectively and efficiently transfer findings into educational practice for use by other researchers and policymakers.

3. RESEARCH INITIATION AWARDS: Projects of up to two years to perform scientific research and develop a STEM research program at the institution.

Research Initiation Awards provide support for a STEM faculty member at the HBCU to pursue research at the home institution, at an NSF-funded Center, at a research intensive institution, or at a national laboratory. The project description should contain all of the elements of a standard NSF research proposal. The project should help to further the faculty member's research capability and effectiveness, to improve research and teaching at his or her home institution, and to involve undergraduate students in research experiences. Research Initiation Awards are for junior faculty who are starting to build a research program, as well as for mid-career faculty who may have returned to the faculty ranks after holding an administrative post or who for some other reason need to redirect and rebuild a research program. Faculty members who hold an active research award are not eligible for the Research Initiation Award.

4A. IMPLEMENTATION PROJECTS: Projects up to five-years on institution-wide, undergraduate STEM education and research capacity building and improvement.

Implementation Projects provide support to design, implement, study and assess comprehensive institutional efforts to increase the numbers of students and the quality of their preparation by strengthening STEM education and research. Implementation projects create and/or adapt and assess innovative models and materials for teaching and learning in STEM, embody knowledge about how students learn most effectively in STEM teaching and learning activities, and bring STEM disciplinary advances into the undergraduate experience. Proposers are encouraged to analyze the strengths and potential of the institution in STEM. Based on this analysis they should design innovative educational strategies, appropriate in content and context to increase the capacity and effectiveness of the institution to attract, retain, educate, and train underrepresented minority students in STEM. The students should graduate prepared competitively to go on to graduate school or the workforce. Transferability and dissemination of successful models, effective methods, and innovative materials for educating undergraduate STEM students are critical aspects of implementation projects.

Implementation Projects undertake comprehensive institutional reform and transformational strategies to strengthen and enhance STEM teaching and learning and to improve student access and retention in STEM areas. The components of the implementation design should comprise research-based or evidence-based practices and strategies to produce significant improvements in undergraduate STEM education and research programs at the institution. Project components may include, but are not limited to: developing and assessing innovative STEM curriculum teaching and learning techniques; using cyberinfrastructure for anytime, anywhere, anyone learning; providing novel undergraduate student development activities and educational enrichment services; enhancing undergraduate student research experiences; providing activities that promote the development of a globally engaged workforce, including international research experiences for undergraduate students and faculty; creating new approaches to recruitment and retention of undergraduate STEM students; providing faculty professional development in effective STEM teaching, pedagogy, and research; preparing K-12 STEM teachers; addressing the critical transitions from K-12 to undergraduate, 2-year to 4-year, and undergraduate to graduate; and implementing other activities that enhance the quality and competitiveness of undergraduate STEM programs. A new focus of HBCU-UP is the recruitment and retention of Veterans in STEM fields as a means to diversify and increase the STEM workforce. Proposals that recruit a cohort of Veterans and suggest strategies to retain them, are strongly encouraged.

NSF expects that the activities and strategies included in Implementation Project proposals will be consistent with and complementary to the institution's STEM needs, long-term goals, and mission. Therefore, NSF allows maximum flexibility in the design of Implementation Projects under HBCU-UP. However, the proposal must fully substantiate the rationale for choosing the desired approach. The project scope should depend on the size and number of STEM departments or programs at the institution and be defined by the complexity of the proposed activities in the project design. Ideally, the implementation project would impact all the STEM undergraduate programs, STEM students, and STEM faculty at the institution. The project plan should be clearly described, detailing measurable outcomes for STEM students (e.g. number and types of high quality research experiences, number going on to graduate school or the workforce) and faculty of the proposed HBCU-UP activities. The proposal should include compelling arguments for why these practices and strategies implemented in the specific institutional environment are expected to result in the anticipated outcomes. The proposal also should include activities for scholarly dissemination of project results and processes to inform the broader community about the effectiveness of specific implementation strategies.

If an institution has previously received an Implementation Project grant, it is critical that the proposal for another Implementation Project provide complete information on the outcomes and impact of the previous HBCU-UP project, including a description of what was learned from the previous activities, how these findings were disseminated to the broader community, and how successful activities are being sustained at the institution. Implementation proposals from past awardees must not simply propose to continue the activities of the previous Implementation Project grant. The new proposal should be based on a thorough evaluation of the previous HBCU-UP project and an assessment of the current state of the institution so that a new project can build on progress and achievements and identify new innovations to be realized to move the institution to the next level of STEM program competitiveness. The proposal should include a component that outlines a strategy for the creative integration of NSF-funded awards at the institution that are related to the proposed project's goals and scope.

4B. ACE IMPLEMENTATION PROJECTS: Five-year, institution-wide, undergraduate STEM education and research growth and expansion projects.

Institutions that have had previous Implementation Project grants should be able to exhibit an established foundation and to evidence institutionalized achievements toward the HBCU-UP goals and objectives. As a result, growth in competitiveness and excellence of these HBCU-UP institutions should be clearly evidenced in the readiness of faculty, staff, infrastructure, fiscal and operations management, and institutional leadership to move to the next level of excellence. The Achieving Competitive Excellence (ACE) Implementation Project track is intended for HBCUs exhibiting these qualities as a result of previous Implementation Project grants. ACE HBCU-UP institutions are exemplars because of their consistent academic achievement in the STEM community. The goal of the ACE program is to help institutions to build the capacity to move onto the national landscape in STEM undergraduate education and research. ACE projects are ambitious, potentially transformative proposals that have the promise of significant advances in STEM undergraduate education at the institution. ACE projects should create more and varied pathways to success for STEM students by increasing intellectual and evidence-based resources. Possible approaches might include: establishing new collaborations and alliances with public and private research institutions, centers, and national laboratories; providing access to tomorrow's science through computationally intensive tools and global networks; establishing international collaborations to enhance undergraduate student and faculty research; or increasing fiscal resources for frontier STEM education and research through innovative institutional integration, leveraging partnerships, and strong linkages with business and industry. Institutions submitting an ACE Implementation Project must include a component that outlines a strategy for the creative integration of NSF-funded awards at the institution that are related to the proposed project's goals and scope, and that describes how the institution thinks strategically about moving forward in STEM education and research.

5. OTHER FUNDING OPPORTUNITIES

HBCU-UP also funds Conferences, Symposia, and Workshops; EARly-concept Grants for Exploratory Research (EAGER) and Grants for Rapid Response Research (RAPID); and Grant Supplements for existing awards. Such proposals may be submitted, as described in the Grant Proposal Guide (GPG), which is available at <http://www.nsf.gov>.

Through a Cooperative Activity with the Department of Energy, supplements are available for Science Undergraduate Laboratory Internships (SULI), Faculty-Student Teams (FaST), Community College Institutes (CCI), and Pre-Service Teacher (PST) Internships.

- For Conferences, Symposia, and Workshops, see GPG, II.D.8.
- For Early-concept Grants for Exploratory Research (EAGER), see GPG II.D.2
- For Grants for Rapid Response Research (RAPID), see GPG, II.D.1.
- For a supplement through the Cooperative Activity with the Department of Energy, see the Dear Colleague Letter at http://www.nsf.gov/funding/pgm_summ.jsp?pims_id=5632&org=HRD&from=home.

HBCU-UP funds Planning Grant Projects of twelve to eighteen months to undertake an institutional STEM program self-analysis in preparation for submittal of an implementation project. Planning Grants are submitted as unsolicited proposals.

HRD Special Call for Proposals

Prepare, Engage, and Motivate a Diverse STEM Workforce - Design Proposals to Develop a Broadening Participation in STEM Resource Network

The Division of Human Resource Development (HRD) is interested in funding design proposals to develop strategies to assist HRD grantees and other NSF stakeholders to achieve the NSF performance goal to "Prepare and engage a diverse STEM workforce motivated to participate at the frontiers."^[1] After this design phase, HRD anticipates funding the implementation of a *Broadening Participation in STEM Resource Network* to assist HRD grantees and other NSF stakeholders to prepare, engage, and motivate diverse individuals that are underrepresented in the STEM workforce (women, persons with disabilities, and underrepresented minorities).

HRD anticipates funding up to five 18-month design projects for up to \$250,000 each. The design project should lead to the development of a proposal for a *Broadening Participation in STEM Resource Network (BPS-Resource Network)*. The BPS-Resource Network may be designed as a collaborative effort among many partners. Design projects should consult broadly with the HRD grantee community and other NSF stakeholders to perform a needs assessment. This consultation should be the foundation for developing innovative models for assisting HRD grantees and other NSF stakeholders to prepare, engage, and motivate a diverse STEM workforce. HRD anticipates that the BPS-Resource Network activities will include, but are not limited to, the following:

- **Synthesize and analyze broadening participation in STEM knowledge:** Synthesize and analyze broadening participation in STEM research, education research, and project and program evaluations, to identify strategies and practices that have evidence of effectiveness as well as gaps in the broadening participation in STEM knowledge base.
- **Diffusion of broadening participation in STEM knowledge:** Make research and evaluation results, in particular those produced by HRD grantees and other NSF stakeholders, accessible to public and private audiences and facilitate the utilization of these resources by others. This may involve, but is not limited to, developing tools and strategies to support the adoption or adaptation of various research-based and demonstrated strategies and practices, and assisting HRD grantees to effectively translate and share their broadening participation in STEM knowledge. This may include, but is not limited to, the development of resources such as web portals, databases, and other tools.
- **Establish and support broadening participation in STEM networks:** Build strong networks around areas of interest across and within HRD programs that may include other stakeholders such as other NSF and Federal grantees. This may include, but is not limited to, technical assistance and capacity building activities by and for HRD grantees, the development or adaptation of social media and other networking tools, and national and regional conferences of HRD grantees and other stakeholders.
- **Stimulate innovation in broadening participation in STEM:** Develop mechanisms to encourage innovation and recognize excellence in the area of broadening participation in STEM. This may include, but is not limited to, supporting the development and management of complex creative public-private partnerships, the implementation of prize competitions, and recognition of excellence by organizations and individuals in broadening participation in STEM.

The scope of the design project and the *Broadening Participation in STEM Resource Network* must be inclusive: The scope should span the STEM educational continuum from precollege through the STEM professoriate and workforce and for all underrepresented groups in STEM (women, persons with disabilities, and underrepresented minorities). Additionally, the scope should include the range of institutions and organizations that promote the academic and professional success of underrepresented groups in STEM including Tribal Colleges and Universities, Historically Black Colleges and Universities, and other minority-serving institutions that reflect the Nation's changing demographics, such as the Hispanic-Serving Institutions. HRD recognizes that this is a large, multifaceted, scope. However, we believe that synergy among these communities is valuable and important to foster and leverage. Information on HRD and the portfolio of programs supported by HRD can be found at <http://www.nsf.gov/div/index.jsp?div=HRD>.

Design projects should plan to coordinate and build on the existing EHR program resources that have been developed (listed below) as well as other existing resources whenever possible.

- Math and Science Partnership Network (MSPnet) - hub.mspnet.org
- ITEST Learning Resource Center - itestlrc.edc.org
- Center for Advancing Research and Communication (ARC) - arc.uchicago.edu
- Center for Advancement of Informal Science Education (CAISE) - caise.insci.org
- Community for Advancing Discovery Research in Education (CADRE) - <http://www.cadrek12.org>
- Advanced Technological Education (ATE Central) - <http://www.atecentral.net/>

Design Project Proposal Preparation:

Activities Description - Describe the activities that will be undertaken during the design project. The design phase may include partnership development activities since the *Broadening Participation in STEM Resource Network* may be a collaborative effort among many partners. Please note that direct student support or service programs would not be within the scope of the design project or of the *Broadening Participation in STEM Resource Network*. A brief description of relevant prior support from NSF must be included in the project description of the proposal.

Management Plan and Timeline - Design proposals should include a management plan with descriptions of the expertise and roles of the project personnel including consultants. HRD expects that design projects will include personnel with demonstrated expertise

in working with the promotion of the academic and professional success of underrepresented groups in STEM and/or have strong plans for developing or recruiting this expertise as well as building credibility in the communities that work in these areas. The design project should include an 18-month project timeline with major events and milestones. The timeline and budget should include plans for a meeting of the key project staff at the NSF approximately six months after the start of the project to present on plans and directions for the remaining design project period.

Budget - The total 18-month project budget may be up to \$250,000 including indirect costs.

[1] *Empowering the Nation Through Discovery and Innovation* the NSF Strategic Plan for 2011-2016 (<http://www.nsf.gov/news/strategicplan/index.jsp>)

III. AWARD INFORMATION

HBCU-UP Proposals:

1) Targeted Infusion Projects

- Number of awards: Up to 15 in FY 2012
- Project Length: From two to three years
- Award size: Up to \$300,000
- Grant Administration: Targeted Infusion Projects will be managed by NSF as continuing or standard grants

2) Broadening Participation Research Projects

- Number of awards: Up to 5 in FY 2012
- Project Length: Up to three years
- Award Size: Up to \$350,000
- Restrictions: Equipment costs are not normally allowed under Broadening Participation Research Projects
- Grant Administration: Broadening Participation Research Projects will be managed by NSF as continuing or standard grants

3) Research Initiation Awards

- Number of awards: Up to 15 in FY 2012
- Project Length: Up to two years
- Award Size: Up to \$200,000
- Restrictions: Equipment cost may not exceed 20% of the total budget
- Grant Administration: Research Initiation Awards will be managed by NSF as standard grants

4A) Implementation Projects

- Number of awards: Up to 7 in FY 2012
- Project Length: Up to five years
- Award Size: Up to \$1.75 million
- Restrictions: Equipment costs may not exceed 30% of the total budget request
- Grant Administration: Implementation Projects will be managed by NSF as continuing grants

4B) ACE Implementation Projects

- Number of awards: Up to 2 in FY 2012
- Project Length: Up to five years
- Award Size: Up to \$3 million
- Restrictions: Equipment costs may not exceed 30% of the total budget request
- Grant Administration: ACE Implementation Projects will be managed by NSF as continuing grants

Please refer to Section II, Program Description, for information about the HRD special call for BPS-Resource Network proposals.

IV. ELIGIBILITY INFORMATION

Organization Limit:

Proposals may only be submitted by the following:

- **HBCU-UP Proposals:** Historically Black Colleges and Universities (HBCUs) that are accredited and offer undergraduate educational programs in science, technology, engineering and mathematics (STEM).
- **BPS-Resource Network Proposals:** No limit; the categories of proposers eligible to submit proposals to the National Science Foundation are identified in the [Grant Proposal Guide](#), Chapter I, Section E.

PI Limit:

- The Principal Investigator for a **Targeted Infusion Project** should be the individual who will be involved in the implementation of the project activities.
- The Principal Investigator for a **Broadening Participation Research Project** should be one of the individuals who will perform the research. Other potential co-Principal Investigators include collaborators on the research project. At least one of the Principal Investigators must have experience in education or social science research.
- The Principal Investigator for a **Research Initiation Award** should be a faculty member in a STEM area at the HBCU. Co-Principal Investigators and senior personnel are not permitted.

- The Principal Investigator and co-Principal Investigators for the **Implementation Project and ACE Implementation Project** proposals should be the key personnel that will be involved in the implementation of the project.
- **BPS-Resource Network proposals:** No limit

Limit on Number of Proposals per Organization:

- **HBCU-UP Proposals:** An eligible institution can only have one active implementation award - Implementation Project or ACE Implementation Project.
- **BPS-Resource Network:** No limit

Limit on Number of Proposals per PI:

None Specified

V. PROPOSAL PREPARATION AND SUBMISSION INSTRUCTIONS

A. Proposal Preparation Instructions

Letters of Intent (required):

Letters of intent are required for HBCU-UP.

All letters of intent must be submitted via FastLane. A separate letter of intent is requested for each Targeted Infusion or Implementation/ACE Implementation proposal that will be submitted from an eligible institution.

Letters of intent must contain the following information:

- The type of proposal that will be submitted (Targeted Infusion or Implementation/ACE Implementation)
- Project title
- PI name and Co-PI names, department, institution, phone, fax and email
- Point of contact if different than the PI (phone, fax, email)
- Submitting institution's name
- Project synopsis: Targeted Infusion Projects should provide a brief description of the proposed activities, expected outcomes, and timelines. Implementation Projects/ACE Implementation Projects should propose research-based/evidence-based strategies or practices that could enhance undergraduate STEM education and research at the institution. A brief description of the proposed activities should be provided with explanation why they should be successful in that institutional environment and setting. The expected outcomes from the implementation project should be summarized.

Technical assistance will be offered by the HBCU-UP program office to proposers who submit a letter of intent by the due date.

Letter of Intent Preparation Instructions:

When submitting a Letter of Intent through FastLane in response to this Program Solicitation please note the conditions outlined below:

- Sponsored Projects Office (SPO) Submission is required when submitting Letters of Intent
- A Minimum of 1 and Maximum of 4 Other Senior Project Personnel are allowed
- Proposal Type is required when submitting Letters of Intent
- Submission of multiple Letters of Intent is allowed

Full Proposal Preparation Instructions: Proposers may opt to submit proposals in response to this Program Solicitation via Grants.gov or via the NSF FastLane system.

- Full proposals submitted via FastLane: Proposals submitted in response to this program solicitation should be prepared and submitted in accordance with the general guidelines contained in the NSF Grant Proposal Guide (GPG). The complete text of the GPG is available electronically on the NSF website at: http://www.nsf.gov/publications/pub_summ.jsp?ods_key=gpg. Paper copies of the GPG may be obtained from the NSF Publications Clearinghouse, telephone (703) 292-7827 or by e-mail from nsfpubs@nsf.gov. Proposers are reminded to identify this program solicitation number in the program solicitation block on the NSF Cover Sheet For Proposal to the National Science Foundation. Compliance with this requirement is critical to determining the relevant proposal processing guidelines. Failure to submit this information may delay processing.
- Full proposals submitted via Grants.gov: Proposals submitted in response to this program solicitation via Grants.gov should be prepared and submitted in accordance with the NSF Grants.gov Application Guide: A Guide for the Preparation and Submission of NSF Applications via Grants.gov. The complete text of the NSF Grants.gov Application Guide is available on the Grants.gov website and on the NSF website at: (http://www.nsf.gov/publications/pub_summ.jsp?ods_key=grantsgovguide). To obtain copies of the Application Guide and Application Forms Package, click on the Apply tab on the Grants.gov site, then click on the Apply Step 1: Download a Grant Application Package and Application Instructions link and enter the funding opportunity number, (the program solicitation number without the NSF prefix) and press the Download Package button. Paper copies of the Grants.gov Application Guide also may be obtained from the NSF Publications Clearinghouse, telephone (703) 292-7827 or by e-mail from nsfpubs@nsf.gov.

In determining which method to utilize in the electronic preparation and submission of the proposal, please note the following:

Collaborative Proposals. All collaborative proposals submitted as separate submissions from multiple organizations must be submitted via the NSF FastLane system. Chapter II, Section D.4 of the Grant Proposal Guide provides additional information on collaborative proposals.

For HBCU-UP PROJECTS

- COVER SHEET-
 - For all HBCU-UP proposals under "NSF Unit Consideration" please select:

- "HRD-Division of Human Resource Development" as the division
 - "Hist Black Colleges and Univ" as the program
- Targeted Infusion Project proposals:
 - Please begin the project title with "Targeted Infusion Project Grant."
- Broadening Participation Research proposals:
 - Please begin the project title with "Broadening Participation Research Grant."
- Research Initiation Award proposals:
 - Please begin the project title with "Research Initiation Award Grant."
- Implementation proposals:
 - Please begin the project title with "Implementation Grant."
- ACE Implementation proposals:
 - Please begin the project title with "ACE Implementation Grant."

Review the regulations regarding Human Subjects (45 CFR 690.101-124 <http://www.nsf.gov/bfa/dias/policy/human.jsp>). This is particularly important for Broadening Participation Research Projects. Please note that Human Subjects regulations also govern activities that have to do with safeguarding individually identifiable information such as student and faculty surveys and data. Therefore many Implementation Projects and possibly Targeted Infusion Projects, may need to be reviewed by the Human Subjects Internal Review Board (IRB) for the institution. If the project will be IRB reviewed, please indicate on the cover sheet that the review is pending. If the proposal has already been IRB reviewed and found to be exempt, please indicate so on the cover sheet. If the IRB has already given approval of the activities include a letter from the IRB and indicate the expiration date of the IRB approval on the cover sheet.

- PROJECT SUMMARY - The first sentence of the Project Summary should specify the type of proposal (e.g., Targeted Infusion, Broadening Participation Research, Research Initiation Award, Implementation or ACE Implementation) and the challenge or research addressed. The Project Summary is a self-contained one-page description of the activities that would be implemented if the proposal were funded. IMPORTANT NOTE: Proposals will be returned, without review, if they do not address both NSF merit review criteria explicitly in separate statements in the project summary for all proposals submitted under this solicitation: What is the intellectual merit of the proposed activity? and What are the broader impacts of the proposed activity?
- PROJECT DESCRIPTION - 15 page limit. Refer to the "Project Description" section below for more information on each type of HBCU-UP proposal: 1) Targeted Infusion Projects, 2) Broadening Participation Research Projects, 3) Research Initiation Awards and, and 4) Implementation Projects and ACE Implementation Projects.
- REFERENCES CITED - Provide the references cited in the proposal.
- BIOGRAPHICAL SKETCHES - Outline the experiences of the PI and co-PIs (two-page limit each person) using the GPG guidelines.
- BUDGET -
 - Targeted Infusion Projects should budget for the PI to attend a three-day grantee meeting in the Washington, DC area each year of the project.
 - Broadening Participation Research Projects should budget for the PI to attend a three-day grantee meeting in the Washington, DC area each year of the project.
 - Research Initiation Awards Projects should budget for the PI to attend a three-day grantee meeting in the Washington, DC area each year of the project.
 - Implementation Projects and ACE Implementation Projects should budget for the PI and the co-PI who has the most day-to-day contact with the project, to attend a three-day grantee meeting in the Washington, DC area each year of the project. Implementation Projects and ACE Implementation Projects should also budget for the institution's financial officer assigned to the HBCU-UP project to attend a one-day workshop on financial management of NSF grants in the Washington, DC area each year of the project.
- CURRENT AND PENDING SUPPORT- Use the formats provided in FastLane or Grants.gov. Enter this proposal as pending support.
- FACILITIES, EQUIPMENT& OTHER RESOURCES - Provide a description of available facilities and priorities for their use, if applicable. Please note that this section is a required part of the proposal. If not applicable, the proposer should enter "Not applicable" in the Facilities, Equipment, and Other Resources section of the proposal.
- DATA MANAGEMENT PLAN - Must be included as a supplementary document.
- POSTDOCTORAL RESEARCHER MENTORING PLAN - Must be included as a supplementary document if funding to support a postdoctoral researcher is requested.

1) Targeted Infusion Projects - The project description should include the following information:

Background and Context

- Describe the overall goal of the project. The goal must be clearly stated, measurable, and achievable within the proposed time line.
- Describe the benefits of achieving the goal to STEM education and research at the institution. For example, implementing the project will make graduates more competitive in the workforce or for graduate school, or better prepare them for success in the workforce or for graduate school, or cause more students to be enrolled in a STEM degree program, or cause more students to be retained in a STEM major, or meet a local workforce need.
- Baseline data should be included in order to provide the context for the impact of the Targeted Infusion Project. For example, include the courses and the student enrollment in those courses that will be impacted by the proposed project.

Proposed Activities

- Describe the activities that will be undertaken in order to achieve the goal. The activities must clearly be related to achieving the goal. Focused proposals are more competitive -avoid a proposal attempting to do a little bit of everything. Proposals that make funding requests for normal operating costs are discouraged.
- Since institutions have different policies and procedures, such as for new degree program approval, explain how the project timelines reflect all institutional requirements. If appropriate, include evidence (such as letters of support) that indicate that institutionally required procedures are being followed and preliminary approvals have been secured.
- Equipment and supplies:
 - Explain how recurring costs, such as lab supplies for a newly created laboratory course, will be supported after the project ends.
 - Quotes or estimates for major equipment purchases should be included in the supplementary documents section.
 - Explain how long-term maintenance of new equipment will be supported after the project ends.

Dissemination

Describe plans to communicate the results and outcomes of the project to other professionals in STEM education and research, both during and after the project. Describe the information to be disseminated, the means of dissemination, and the procedures for determining the success of the dissemination effort.

Project Management

- Provide a management plan for the project that will ensure that the activities and the required reporting will be implemented on time and within budget.
- Provide a timeline for the activities to be implemented - include measurable objectives and outcomes and the staff that are responsible for carrying out the activities.

Evaluation Plan (see section on project evaluation)

2) Broadening Participation Research Projects

- The project description should include the following information:

Background and Context

- Describe the research question(s) to be investigated and explain the significance and importance of answering the proposed research question(s). Discuss the base of research/theory that motivates the question(s).
- Explain how the research will contribute to the knowledge base of STEM education research and how it has the potential to improve STEM education at HBCUs.

Proposed Research Activities

- Describe the research plan (design, data collection, data analysis, etc.) that will be undertaken in order to answer the research question(s).
- Provide a timeline for the research plan - include measurable objectives and outcomes and identify who will be responsible for completing each task.
- Study of a promising intervention and effectiveness studies are permitted.
- In general, implementation activities are not recommended under Broadening Participation Research Projects. In some cases, implementation activities may be appropriate but these activities must clearly be required in order to answer the proposed research question(s) and must be significantly different from implementation activities undertaken in other projects. If implementation activities are included, clearly explain why the activities are needed to answer the research question(s).

Dissemination

Describe plans to communicate the results and outcomes of the project to other professionals in STEM education and research, both during and after the project. Describe the information to be disseminated, the means of dissemination, and the procedures for determining the success of the dissemination effort.

Project Management

- Provide a management plan for the project that will ensure that the activities and the required reporting will be implemented on time and within budget.
- At least one of the PIs on the project must have formal training in education or social science research or significant professional experience doing education or social science research.

Evaluation plan for Research Projects (see section on project evaluation)

3) Research Initiation Awards

In addition to following the general format for research proposals as described in the GPG, Research Initiation Award (RIA) proposals submitted must also adhere to the following special instructions:

If desired or appropriate, the PI could find a research collaborator at an NSF funded research center, such as a Center for Research Excellence in Science and Technology, Engineering Research Center, Materials Research Science and Engineering Center, Physics Frontier Center, Science and Technology Center, Science of Learning Center; at a national laboratory; or with a research group at a research university. In that case, the PI should plan to conduct research during the summer months at the research collaborator's site (if it is not the home institution) and make arrangements for continuing the research during the academic year at his or her home institution. Support can be provided for release time during the academic year, summer salary for the PI, travel and housing at the research site for the PI and undergraduate students, and stipends for undergraduate student research experiences.

Project Summary (one-page limit):

Provide a succinct summary of the intellectual merit of the proposed project. This should include the potentially transformative nature of the proposed research. Describe the broader impacts of the proposed work, including benefits to society, dissemination of work, enhancements to scientific knowledge, as well as how the proposed activity will broaden participation of underrepresented groups. Project summaries that do not contain separate paragraphs that are labeled and explicitly address both intellectual merit and broader impacts will be returned without review.

Project Description (15 page limit, including tables, figures, and other visual supplements):

Provide a detailed statement of the proposed research to be undertaken. It should contain:

- A brief description of the PI's overall research and education goals.
- A detailed description of the proposed research activities including any preliminary data already available and a description of data that the PI plans to obtain.
- The relationship of the proposed activities to the PI's projected longer term research goals.
- A discussion of how those activities will benefit the research capacity at the institution.
- A discussion of how undergraduate students will be involved in this research.
- A plan for dissemination of this research.
- A plan for evaluation of this project.

Evaluation plan for Research Projects (see section on project evaluation)

Budget:

- Proposed budgets must include funds for the PI to attend a three-day grantee meeting in the Washington, DC area each year of the project.
- Cost of equipment cannot exceed 20% of the total budget.

Special Information and Supplementary Documentation:

Include the following:

- A letter of commitment from the PI's Department Chair or Dean stating that the PI will have institutional support in terms of allowance for release time, travel for research purposes, and access to existing research facilities.
- A mentoring plan for the PI from the Department Chair or Dean.
- When applicable, a letter of support from the PI's research collaborator.
- When applicable, a research mentoring plan for the PI from the research collaborator.
- A mentoring plan from the PI for the undergraduate students that are involved in the project.

4) Implementation Projects - Implementation Projects should be about creating or adapting and implementing, studying, and assessing evidence-based practices that strengthen and enhance STEM teaching and learning and increase productivity and outcomes from STEM undergraduate programs. The relevant research or knowledge base that supports the effectiveness of the efforts selected should be included with compelling arguments as to why these strategies are expected to result in the anticipated outcomes at the institution.

ACE Implementation: This highly competitive track is for accomplished HBCU-UP institutions that are exemplars because of their consistent academic achievement in the HBCU STEM community. The proposals for this track are ambitious, potentially transformative, and have the promise of significant advances in STEM undergraduate education at the HBCU. The goal of the ACE program is in helping these institutions to excel and moving the HBCU-UP portfolio forward.

The project description should address the following elements:

Background and Context

- State the problem(s) to be addressed.
- Articulate current knowledge of the problem(s) and some of the causes as understood from documented sources.
- Provide information on the institution's current STEM education and research capability (baseline data). Examples of information and data include: a description of STEM degree programs, student enrollment, retention, graduation rates, number of students going to graduate schools, gatekeeper course performance, STEM faculty demographics, and STEM infrastructure resources at the institution and collaborating organizations.
- Describe prior efforts and results of those efforts. Provide information on STEM-related programs that have been implemented or are currently active. This should include previous HBCU-UP awards and awards from other NSF programs (for example the Louis Stokes Alliances for Minority Participation [LSAMP] or the Transforming Undergraduate Education in Science, Technology, Engineering and Mathematics [TUES] program), other Federal programs (for example the Minority Science and Engineering Improvement Program [MSEIP] or the Minority Access to Research Careers [MARC] program), State programs, and institution programs. Explain the outcomes from these efforts. Institutions that have received an HBCU-UP Planning Grant must describe the planning grant activities and the findings of those activities.
- Identify the areas that have not been understood, determined, verified, tested, or resolved by previous efforts. Highlight some of the areas that need improvement and that will be addressed with the proposed project activities.

Goals and Objectives

- Clearly state the goals and objectives of the project.
- Describe the information and knowledge that will be obtained from the project.
- Describe the expected results and student outcomes.
- Explain the expected significance of the project and the compatibility with the mission and environment of the institution.

Detailed Project Plan

- Describe the research-based or evidence-based practices selected for implementation and why and how they could improve undergraduate STEM education at the institution and under the present setting and conditions.
- As necessary, describe the demographic, social, cultural, political, and economic environment in which the project is situated and how this environment may affect implementation, operations, and results. Describe adjustments that must be made to adapt the documented practices and strategies of this project to the environment.
- Implementation Design: Present the conceptual model of the project and describe each of the components (i.e. each of the educational activities and interventions being implemented) and their links to the project goals and objectives.
- Implementation/Intervention Study: Define the procedures and methods for analyzing and assessing each of the educational activities and interventions of the project in producing the desired effects.
- Define the expected measurable outcomes and explain the relationships with the components of the implementation linked to project goals and objectives. Include indicators and benchmarks with timelines that will determine which implementation strategies are proving to be effective in the environment.

Dissemination

Describe plans to communicate the results and outcomes of the project to other professionals in STEM education and research, both during and after the project. Describe the information to be disseminated, the means of dissemination, and the procedures for determining the success of the dissemination effort.

Project Management Plan

Implementation of evidence-based practices and programs almost always requires organizational change. Define the organizational structure for the project and explain its institutional alignment for achieving the project goals and objectives. Define the roles and responsibilities of key personnel who will carry out project activities.

If the research-based/evidenced-based practices project is not implemented with fidelity, it will not achieve the desired impact. Define the processes and systems that will be applied to operate the project, including budget management, data management and reporting. Define the types and levels of resources being applied to implement the project as planned. Define the operational performance measures of the project with targets and timelines. Describe the process for mid-course corrections. Define the plans for sustainability or institutionalization of any project components.

The Principal Investigator should be an academic leader with the authority to lead a project that crosses several STEM schools, departments, or units. The co-Principal Investigators should be STEM academic leaders, scientists, and faculty members who carry-out the project work plan. Implementation Projects should have an Internal Steering Committee or Internal Advisory Committee to help manage the project implementation, resolve project issues, and ensure that the project is on track for meeting project goals. Implementation Projects also should have an External Advisory Committee that meets at least once a year.

Define the commitment of institutional leadership to the implementation process. Provide evidence of the commitment to the proposed Implementation Project activities from the institutional administration, STEM leadership and faculty, and other partners and collaborators, as applicable. Substantive letters of commitment to the proposed project activities can be included as supplementary documents. General letters of support from individuals not involved in the implementation of project activities should not be included.

Evaluation Plan (see section on project evaluation)

PROJECT EVALUATION

All proposals should include an evaluation section that describes how the project evaluator/ evaluation team will determine the accomplishment of project goals and the impact of the project. Evaluation should be based on benchmarks, indicators, or expected outcomes related to project goals and activities. Evaluation plans should be based on a Logic Model or other tool that relates project goals to activities and to outputs, outcomes, and impact (immediate, short-term, and intermediate-term expected changes). Most evaluations are based on evaluation questions that relate to program and project goals. Evaluation plans should be appropriate to the scope of the project; this usually includes both formative and summative evaluations. Formative evaluation plans outline methods for documenting progress toward project goals and should include a feedback feature that allows for continuous improvement of the project activities. In some cases, formative evaluation may internal to the project. Summative evaluation focuses on the influence of the project on the targeted expected outputs and outcomes, and over-all impact of the project. Some projects will utilize experimental or quasi-experimental designs as the basis for their summative evaluation plans.

Evaluations are expected to include both qualitative and quantitative methodology. Expected project outputs, outcomes and impact should be included in the evaluation plan and should, when possible, rely on measures that are valid and reliable with the targeted participants. Outputs are the numbers related to project activities such as the number of faculty in pedagogical workshops, the number of students who attended a summer STEM orientation, or the number of peer-reviewed publications attributed to the project. Outcomes are defined as the results of participation in project activities. Strategic impacts are lasting outcomes attributable to the project. The demonstration of project impact is the result of the overall influence of the project on the goal of the program. An example of impact is increased graduation rates of students who participated in a specific model compared to baseline or a control/comparison group.

Evaluation for research projects is expected to be appropriate for research. Evaluation plans for research projects could include activities related to project integrity and usefulness / utilization / and dissemination of findings. Evaluation activities could include such activities as documenting and describing the operation of the project through all phases and oversight related to appropriate selection of participant, fidelity, and integrity of research design and measures (formative); and assessing the extent to which findings contribute to the knowledge base in the field and are disseminated to those researchers and practitioners who will utilize the findings (summative).

The budget MUST include adequate resources for project evaluation. Project evaluation should be led by an expert independent evaluator. Evaluators are expected to adhere to the Guiding Principles for Evaluators <http://www.eval.org/GPTraining> and project evaluations are expected to be consistent with standards established by the Joint Committee on Standards for Educational Evaluation (<http://www.jcsee.org/>).

BPS-Resource Network Proposals:

Please refer to Section II, Program Description, for information about preparing proposals in response to the HRD special call for design proposals to develop a Broadening Participation in STEM Resource Network.

B. Budgetary Information

Cost Sharing: Inclusion of voluntary committed cost sharing is prohibited

Other Budgetary Limitations:

- Equipment Limitations:
 - Broadening Participation Research Projects - Broadening Participation Research Projects are not intended to support implementation activities; therefore major equipment is not normally included. However, minimal equipment costs are allowed if required to perform the research activities.
 - Research Initiation Awards - Equipment cost cannot exceed 20% of the total budget.
 - Implementation Projects and ACE Implementation Projects - Equipment costs cannot exceed 30% of the total NSF budget requested.
- Required Meeting Travel:
 - Targeted Infusion Projects should budget for the PI to attend a three-day grantee meeting in the Washington, DC area each year of the project.
 - Broadening Participation Research Projects should budget for the PI(s) to attend a three-day grantee meeting in the Washington, DC area each year of the project.
 - Research Initiation Awards should budget for the PI to attend a three-day grantee meeting in the Washington, DC area each year of the project.
 - Implementation Projects and ACE Implementation Projects should budget for the PI and the co-PI or a staff person responsible for the most day-to-day management of the project to attend a three-day grantee meeting in the Washington, DC area each year of the project. Implementation Projects and ACE Implementation Projects should also budget for the institution's financial officer assigned to the HBCU-UP project to attend a one-day workshop on financial management of NSF grants in the Washington, DC area each year of the project.
- Financial support may be provided to student participants under HBCU-UP projects. However, financial support may only be provided to students that are U.S. citizens, nationals, or permanent residents. Student support should be included on the "Stipends" line under the "Participant Support Costs" section of the budget. Stipends to undergraduate students should not replace other need based grants and scholarships already awarded to the students.

C. Due Dates

- **Letter of Intent Due Date(s) (required)** (due by 5 p.m. proposer's local time):

January 20, 2012

Letters of Intent are required for Targeted Infusion Projects, Implementation Projects, Achieving Competitive Excellence (ACE) Implementation Projects

- **Full Proposal Deadline(s)** (due by 5 p.m. proposer's local time):

March 12, 2012

Targeted Infusion Projects, Broadening Participation Research Projects, Research Initiation Awards, Implementation Projects, Achieving Competitive Excellence (ACE) Implementation Projects

- **Submission Window Date(s)** (due by 5 p.m. proposer's local time):

January 12, 2012 - July 12, 2012

HRD Design Project Proposals for a Broadening Participation in STEM Resource Network

D. FastLane/Grants.gov Requirements

- **For Proposals Submitted Via FastLane:**

Detailed technical instructions regarding the technical aspects of preparation and submission via FastLane are available at: <https://www.fastlane.nsf.gov/a1/newstan.htm>. For FastLane user support, call the FastLane Help Desk at 1-800-673-6188 or e-mail fastlane@nsf.gov. The FastLane Help Desk answers general technical questions related to the use of the FastLane system. Specific questions related to this program solicitation should be referred to the NSF program staff contact(s) listed in Section VIII of this funding opportunity.

Submission of Electronically Signed Cover Sheets. The Authorized Organizational Representative (AOR) must electronically sign the proposal Cover Sheet to submit the required proposal certifications (see Chapter II, Section C of the Grant Proposal Guide for a listing of the certifications). The AOR must provide the required electronic certifications within five working days following the electronic submission of the proposal. Further instructions regarding this process are available on the FastLane Website at: <https://www.fastlane.nsf.gov/fastlane.jsp>.

- **For Proposals Submitted Via Grants.gov:**

Before using Grants.gov for the first time, each organization must register to create an institutional profile. Once registered, the applicant's organization can then apply for any federal grant on the Grants.gov website. Comprehensive information about using Grants.gov is available on the Grants.gov Applicant Resources webpage: http://www07.grants.gov/applicants/app_help_reso.jsp. In addition, the NSF Grants.gov Application Guide provides additional technical guidance regarding preparation of proposals via Grants.gov. For Grants.gov user support, contact the Grants.gov Contact Center at 1-800-518-4726 or by email: support@grants.gov. The Grants.gov Contact Center answers general technical questions related to the use of Grants.gov. Specific questions related to this program solicitation should be referred to the NSF program staff contact(s) listed in Section VIII of this solicitation.

Submitting the Proposal: Once all documents have been completed, the Authorized Organizational Representative (AOR) must submit the application to Grants.gov and verify the desired funding opportunity and agency to which the application is submitted. The AOR must then sign and submit the application to Grants.gov. The completed application will be transferred to the NSF FastLane system for further processing.

VI. NSF PROPOSAL PROCESSING AND REVIEW PROCEDURES

Proposals received by NSF are assigned to the appropriate NSF program where they will be reviewed if they meet NSF proposal preparation requirements. All proposals are carefully reviewed by a scientist, engineer, or educator serving as an NSF Program Officer, and usually by three to ten other persons outside NSF who are experts in the particular fields represented by the proposal. These reviewers are selected by Program Officers charged with the oversight of the review process. Proposers are invited to suggest names of persons they believe are especially well qualified to review the proposal and/or persons they would prefer not review the proposal. These suggestions may serve as one source in the reviewer selection process at the Program Officer's discretion. Submission of such names, however, is optional. Care is taken to ensure that reviewers have no conflicts of interest with the proposal.

A. NSF Merit Review Criteria

All NSF proposals are evaluated through use of the two National Science Board (NSB)-approved merit review criteria: intellectual merit and the broader impacts of the proposed effort. In some instances, however, NSF will employ additional criteria as required to highlight the specific objectives of certain programs and activities.

The two NSB-approved merit review criteria are listed below. The criteria include considerations that help define them. These considerations are suggestions and not all will apply to any given proposal. While proposers must address both merit review criteria, reviewers will be asked to address only those considerations that are relevant to the proposal being considered and for which the reviewer is qualified to make judgements.

What is the intellectual merit of the proposed activity?

How important is the proposed activity to advancing knowledge and understanding within its own field or across different fields? How well qualified is the proposer (individual or team) to conduct the project? (If appropriate, the reviewer will comment on the quality of the prior work.) To what extent does the proposed activity suggest and

explore creative, original, or potentially transformative concepts? How well conceived and organized is the proposed activity? Is there sufficient access to resources?

What are the broader impacts of the proposed activity?

How well does the activity advance discovery and understanding while promoting teaching, training, and learning? How well does the proposed activity broaden the participation of underrepresented groups (e.g., gender, ethnicity, disability, geographic, etc.)? To what extent will it enhance the infrastructure for research and education, such as facilities, instrumentation, networks, and partnerships? Will the results be disseminated broadly to enhance scientific and technological understanding? What may be the benefits of the proposed activity to society?

Examples illustrating activities likely to demonstrate broader impacts are available electronically on the NSF website at: <http://www.nsf.gov/pubs/gpg/broaderimpacts.pdf>.

Mentoring activities provided to postdoctoral researchers supported on the project, as described in a one-page supplementary document, will be evaluated under the Broader Impacts criterion.

Additional Solicitation Specific Review Criteria

For HBCU-UP: In addition to the two NSF criteria for Intellectual Merit and Broader Impacts, special review criteria for Implementation and ACE Implementation projects are:

- Does the proposal describe a convincing rationale and appropriate methods for the project activities that are research-based/evidence-based?
- Are the project design and methods linked to measureable outcomes and are they appropriate to the scope, scale, and setting for the project?
- Is the project likely to produce high quality results that contribute to the undergraduate STEM education knowledge base?
- Is the project likely to have an impact on STEM education, student learning, and faculty practice?
- Is the project management plan adequate and does it include clear roles and responsibilities of the personnel who will contribute to the project?
- Is there commitment of the leadership to the implementation process?
- Does the evaluation plan define indicators and benchmarks to inform the project team and others about the operations and effectiveness of the implementation?
- Does the project have a plan for effective and scholarly dissemination of results?

NSF staff also will give careful consideration to the following in making funding decisions:

Integration of Research and Education

One of the principal strategies in support of NSF's goals is to foster integration of research and education through the programs, projects, and activities it supports at academic and research institutions. These institutions provide abundant opportunities where individuals may concurrently assume responsibilities as researchers, educators, and students and where all can engage in joint efforts that infuse education with the excitement of discovery and enrich research through the diversity of learning perspectives.

Integrating Diversity into NSF Programs, Projects, and Activities

Broadening opportunities and enabling the participation of all citizens -- women and men, underrepresented minorities, and persons with disabilities -- is essential to the health and vitality of science and engineering. NSF is committed to this principle of diversity and deems it central to the programs, projects, and activities it considers and supports.

B. Review and Selection Process

Proposals submitted in response to this program solicitation will be reviewed by Ad hoc Review and/or Panel Review.

Reviewers will be asked to formulate a recommendation to either support or decline each proposal. The Program Officer assigned to manage the proposal's review will consider the advice of reviewers and will formulate a recommendation.

After scientific, technical and programmatic review and consideration of appropriate factors, the NSF Program Officer recommends to the cognizant Division Director whether the proposal should be declined or recommended for award. NSF is striving to be able to tell applicants whether their proposals have been declined or recommended for funding within six months. The time interval begins on the deadline or target date, or receipt date, whichever is later. The interval ends when the Division Director accepts the Program Officer's recommendation.

A summary rating and accompanying narrative will be completed and submitted by each reviewer. In all cases, reviews are treated as confidential documents. Verbatim copies of reviews, excluding the names of the reviewers, are sent to the Principal Investigator/Project Director by the Program Officer. In addition, the proposer will receive an explanation of the decision to award or decline funding.

In all cases, after programmatic approval has been obtained, the proposals recommended for funding will be forwarded to the Division of Grants and Agreements for review of business, financial, and policy implications and the processing and issuance of a grant or other agreement. Proposers are cautioned that only a Grants and Agreements Officer may make commitments, obligations or awards on behalf of NSF or authorize the expenditure of funds. No commitment on the part of NSF should be inferred from technical or budgetary discussions with a NSF Program Officer. A Principal Investigator or organization that makes financial or personnel commitments in the absence of a grant or cooperative agreement signed by the NSF Grants and Agreements Officer does so at their own risk.

VII. AWARD ADMINISTRATION INFORMATION

A. Notification of the Award

Notification of the award is made to *the submitting organization* by a Grants Officer in the Division of Grants and Agreements. Organizations whose proposals are declined will be advised as promptly as possible by the cognizant NSF Program administering the program. Verbatim copies of reviews, not including the identity of the reviewer, will be provided automatically to the Principal Investigator. (See Section VI.B. for additional information on the review process.)

B. Award Conditions

An NSF award consists of: (1) the award letter, which includes any special provisions applicable to the award and any numbered amendments thereto; (2) the budget, which indicates the amounts, by categories of expense, on which NSF has based its support (or otherwise communicates any specific approvals or disapprovals of proposed expenditures); (3) the proposal referenced in the award letter; (4) the applicable award conditions, such as Grant General Conditions (GC-1); * or Research Terms and Conditions * and (5) any announcement or other NSF issuance that may be incorporated by reference in the award letter. Cooperative agreements also are administered in accordance with NSF Cooperative Agreement Financial and Administrative Terms and Conditions (CA-FATC) and the applicable Programmatic Terms and Conditions. NSF awards are electronically signed by an NSF Grants and Agreements Officer and transmitted electronically to the organization via e-mail.

*These documents may be accessed electronically on NSF's Website at http://www.nsf.gov/awards/managing/award_conditions.jsp?org=NSF. Paper copies may be obtained from the NSF Publications Clearinghouse, telephone (703) 292-7827 or by e-mail from nsfpubs@nsf.gov.

More comprehensive information on NSF Award Conditions and other important information on the administration of NSF awards is contained in the NSF *Award & Administration Guide* (AAG) Chapter II, available electronically on the NSF Website at http://www.nsf.gov/publications/pub_summ.jsp?ods_key=aag.

Special Award Conditions:

Reverse Site Visits: Participation in a Reverse Site Visit (RSV) can be requested by NSF at any time during the grant period. The RSV is a presentation on the outcomes and progress of the grant activities at NSF in front of a peer review panel. Participation in the RSV is required by the appropriate grant management team and institutional administration.

Site Visits: NSF staff may visit the site of the grant project at anytime during the grant period. Reasonable accommodation of the site visit by NSF program staff is required by the grantee.

Cooperation with NSF evaluation projects and special projects: NSF, an NSF contractor, or a grantee on behalf of NSF, may from time to time conduct program evaluations or special projects of HBCU-UP projects. These may occur at anytime during the grant period and sometimes after the grant period has ended. Reasonable cooperation with these efforts is required by the grantee.

C. Reporting Requirements

For all multi-year grants (including both standard and continuing grants), the Principal Investigator must submit an annual project report to the cognizant Program Officer at least 90 days before the end of the current budget period. (Some programs or awards require more frequent project reports). Within 90 days after expiration of a grant, the PI also is required to submit a final project report, and a project outcomes report for the general public.

Failure to provide the required annual or final project reports, or the project outcomes report will delay NSF review and processing of any future funding increments as well as any pending proposals for that PI. PIs should examine the formats of the required reports in advance to assure availability of required data.

PIs are required to use NSF's electronic project-reporting system, available through FastLane, for preparation and submission of annual and final project reports. Such reports provide information on activities and findings, project participants (individual and organizational), publications, and other specific products and contributions. PIs will not be required to re-enter information previously provided, either with a proposal or in earlier updates using the electronic system. Submission of the report via FastLane constitutes certification by the PI that the contents of the report are accurate and complete. The project outcomes report must be prepared and submitted using Research.gov. This report serves as a brief summary, prepared specifically for the public, of the nature and outcomes of the project. This report will be posted on the NSF website exactly as it is submitted by the PI.

VIII. AGENCY CONTACTS

Please note that the program contact information is current at the time of publishing. See program website for any updates to the points of contact.

General inquiries regarding this program should be made to:

- Claudia Rankins, Program Director, 815N, telephone: (703) 292-8109, fax: (703) 292-9018, email: crankins@nsf.gov
- Toni Edquist, Program Specialist, telephone: (703)-292-4649, email: tedquist@nsf.gov
- Danielle Kittrell, Science Assistant, 815N, telephone: (703)-292-4448, email: dkittrel@nsf.gov

For questions related to the use of FastLane, contact:

- FastLane Help Desk, telephone: 1-800-673-6188; e-mail: fastlane@nsf.gov.

For questions relating to Grants.gov contact:

- Grants.gov Contact Center: If the Authorized Organizational Representatives (AOR) has not received a confirmation message from Grants.gov within 48 hours of submission of application, please contact via telephone: 1-800-518-4726; e-mail: support@grants.gov.

IX. OTHER INFORMATION

The NSF Website provides the most comprehensive source of information on NSF Directorates (including contact information), programs and funding opportunities. Use of this Website by potential proposers is strongly encouraged. In addition, National Science Foundation Update is a free e-mail subscription service designed to keep potential proposers and other interested parties apprised of new NSF funding opportunities and publications, important changes in proposal and award policies and procedures, and upcoming NSF Regional Grants Conferences. Subscribers are informed through e-mail when new publications are issued that match their identified interests. Users can subscribe to this service by clicking the "Get NSF Updates by Email" link on the [NSF web site](#).

Grants.gov provides an additional electronic capability to search for Federal government-wide grant opportunities. NSF funding opportunities may be accessed via this new mechanism. Further information on Grants.gov may be obtained at <http://www.grants.gov>.

ABOUT THE NATIONAL SCIENCE FOUNDATION

The National Science Foundation (NSF) is an independent Federal agency created by the National Science Foundation Act of 1950, as amended (42 USC 1861-75). The Act states the purpose of the NSF is "to promote the progress of science; [and] to advance the national health, prosperity, and welfare by supporting research and education in all fields of science and engineering."

NSF funds research and education in most fields of science and engineering. It does this through grants and cooperative agreements to more than 2,000 colleges, universities, K-12 school systems, businesses, informal science organizations and other research organizations throughout the US. The Foundation accounts for about one-fourth of Federal support to academic institutions for basic research.

NSF receives approximately 40,000 proposals each year for research, education and training projects, of which approximately 11,000 are funded. In addition, the Foundation receives several thousand applications for graduate and postdoctoral fellowships. The agency operates no laboratories itself but does support National Research Centers, user facilities, certain oceanographic vessels and Arctic and Antarctic research stations. The Foundation also supports cooperative research between universities and industry, US participation in international scientific and engineering efforts, and educational activities at every academic level.

Facilitation Awards for Scientists and Engineers with Disabilities provide funding for special assistance or equipment to enable persons with disabilities to work on NSF-supported projects. See Grant Proposal Guide Chapter II, Section D.2 for instructions regarding preparation of these types of proposals.

The National Science Foundation has Telephonic Device for the Deaf (TDD) and Federal Information Relay Service (FIRS) capabilities that enable individuals with hearing impairments to communicate with the Foundation about NSF programs, employment or general information. TDD may be accessed at (703) 292-5090 and (800) 281-8749, FIRS at (800) 877-8339.

The National Science Foundation Information Center may be reached at (703) 292-5111.

The National Science Foundation promotes and advances scientific progress in the United States by competitively awarding grants and cooperative agreements for research and education in the sciences, mathematics, and engineering.

To get the latest information about program deadlines, to download copies of NSF publications, and to access abstracts of awards, visit the NSF Website at <http://www.nsf.gov>

PRIVACY ACT AND PUBLIC BURDEN STATEMENTS

The information requested on proposal forms and project reports is solicited under the authority of the National Science Foundation Act of 1950, as amended. The information on proposal forms will be used in connection with the selection of qualified proposals; and project reports submitted by awardees will be used for program evaluation and reporting within the Executive Branch and to Congress. The information requested may be disclosed to qualified reviewers and staff assistants as part of the proposal review process; to proposer institutions/grantees to provide or obtain data regarding the proposal review process, award decisions, or the administration of awards; to government contractors, experts, volunteers and researchers and educators as necessary to complete assigned work; to other government agencies or other entities needing information regarding applicants or nominees as part of a joint application review process, or in order to coordinate programs or policy; and to another Federal agency, court, or party in a court or Federal administrative proceeding if the government is a party. Information about Principal Investigators may be added to

the Reviewer file and used to select potential candidates to serve as peer reviewers or advisory committee members. See Systems of Records, [NSF-50](#), "Principal Investigator/Proposal File and Associated Records," 69 Federal Register 26410 (May 12, 2004), and [NSF-51](#), "Reviewer/Proposal File and Associated Records," 69 Federal Register 26410 (May 12, 2004). Submission of the information is voluntary. Failure to provide full and complete information, however, may reduce the possibility of receiving an award.

An agency may not conduct or sponsor, and a person is not required to respond to, an information collection unless it displays a valid Office of Management and Budget (OMB) control number. The OMB control number for this collection is 3145-0058. Public reporting burden for this collection of information is estimated to average 120 hours per response, including the time for reviewing instructions. Send comments regarding the burden estimate and any other aspect of this collection of information, including suggestions for reducing this burden, to:

Suzanne H. Plimpton
Reports Clearance Officer
Division of Administrative Services
National Science Foundation
Arlington, VA 22230
