Earth Sciences: Instrumentation and Facilities (EAR/IF)

PROGRAM SOLICITATION
NSF 15-516

REPLACES DOCUMENT(S):
NSF 11-544

Full Proposal Deadline(s) (due by 5 p.m. proposer's local time):
Proposals Accepted Anytime

IMPORTANT INFORMATION AND REVISION NOTES

The maximum allowable request for proposals for Acquisition or Upgrade of Research Equipment has been changed to $750,000. Any proposal submitted in response to this solicitation should be submitted in accordance with the revised NSF Proposal & Award Policies & Procedures Guide (PAPPG) (NSF 15-1), which is effective for proposals submitted, or due, on or after December 26, 2014. The PAPPG is consistent with, and, implements the new Uniform Administrative Requirements, Cost Principles, and Audit Requirements for Federal Awards (Uniform Guidance) (2 CFR § 200).

SUMMARY OF PROGRAM REQUIREMENTS

General Information

Program Title:
Earth Sciences: Instrumentation and Facilities (EAR/IF)

Synopsis of Program:
The Instrumentation and Facilities Program in the Division of Earth Sciences (EAR/IF) supports meritorious requests for infrastructure that promotes research and education in areas supported by the Division (see http://www.nsf.gov/div/index.jsp?div=EAR). EAR/IF will consider proposals for:

1) Acquisition or Upgrade of Research Equipment that will advance laboratory and field investigations and student research training opportunities in the Earth sciences. The maximum request is $750,000. The maximum request for upgrade of research group computing facilities is $75,000.

2) Development of New Instrumentation, Techniques or Software that will extend current research and research training capabilities in the Earth sciences. The maximum request is $750,000.

3) Support of National or Regional Multi-User Facilities that will make complex and expensive instruments, systems of instruments or services broadly available to the Earth science research and student communities.

4) Support for Early Career Investigators to facilitate expedient development and operation of new research infrastructure proposed by the next generation of leaders in the Earth Sciences. The Early Career opportunity specifically allows for submission of a proposal for Acquisition or Upgrade of Research Equipment or Development of New Instrumentation, Techniques or Software which may include additional budget line items associated with support of a new full-time technician who will be dedicated to manage, operate and maintain the instrument(s) being requested. Any request for technical support under this opportunity is limited to three years duration. The maximum total request is $1,000,000.

Planned research uses of requested instruments, software, and facilities must include basic research on Earth processes SUPPORTED BY CORE PROGRAMS OR SPECIAL PROGRAMS OF THE DIVISION OF EARTH SCIENCES (see http://www.nsf.gov/div/index.jsp?div=EAR for a current list of programs funded by the Division of Earth Sciences).

Support is available through grants or cooperative agreements awarded in response to investigator-initiated proposals.
Human resource development and education are expected to be an integral part of all proposals submitted to EAR/IF.

Efforts to support participation of underrepresented groups in laboratory and/or field instrument use and training are encouraged.

All proposers to EAR/IF are encouraged to consider Support of Outreach and/or Broadening Participation Activities. Proposals submitted to the EAR/IF Program may request up to $20,000 for such activities (please refer to Sections V.A Proposal Preparation Instructions and V.B Budgetary Information). Proposals for Support of National or Regional Multi-User Facilities are excluded from the $20,000 maximum for outreach and broadening participation activities.

Proposals requesting equipment, infrastructure or personnel that will also serve disciplines outside the Earth sciences may be jointly reviewed with other programs within the Foundation. EAR/IF will consider co-funding of projects with other NSF programs and other agencies. Potential applicants who consider joint review a possibility for their proposal are encouraged to contact the relevant program officer to discuss this possibility.

Cognizant Program Officer(s):

Please note that the following information is current at the time of publishing. See program website for any updates to the points of contact.

- Russell C. Kelz, Program Director, 790 N, telephone: (703) 292-4747, fax: (703) 292-9023, email: rkelz@nsf.gov
- David D. Lambert, Program Director, 790 N, telephone: (703) 292-8558, fax: (703) 292-9023, email: dlambert@nsf.gov
- Herbert F. Wang, telephone: (703) 292-4742, email: hfwang@nsf.gov

Applicable Catalog of Federal Domestic Assistance (CFDA) Number(s):

- 47.050 --- Geosciences

**Award Information**

Anticipated Type of Award: Standard Grant or Continuing Grant or Cooperative Agreement

Estimated Number of Awards: 30 to 50

Anticipated Funding Amount: $7,000,000 for new awards annually, pending availability of funds

**Eligibility Information**

Who May Submit Proposals:

The categories of proposers eligible to submit proposals to the National Science Foundation are identified in the Grant Proposal Guide, Chapter I, Section E.

Who May Serve as PI:

There are no restrictions or limits.

Limit on Number of Proposals per Organization:

There are no restrictions or limits.

Limit on Number of Proposals per PI or Co-PI:

There are no restrictions or limits.

**Proposal Preparation and Submission Instructions**

A. Proposal Preparation Instructions

- **Letters of Intent:** Not required
- **Preliminary Proposal Submission:** Not required
- **Full Proposals:**

B. Budgetary Information

- **Cost Sharing Requirements:** Inclusion of voluntary committed cost sharing is prohibited.
- **Indirect Cost (F&A) Limitations:** Not Applicable
I. INTRODUCTION

The Division of Earth Sciences supports meritorious proposals for research focused on improving the understanding of the structure, composition, and evolution of the Earth, the life it has supported through geological time, and the processes that govern the formation and behavior of the Earth’s materials. The results of this research advance understanding of the Earth’s changing environments, and the natural distribution of its mineral, water, biota, and energy resources and provide methods for predicting and mitigating the effects of geologic hazards such as earthquakes, volcanic eruptions, floods and landslides.

Earth science is the study of the Earth’s structure, properties, processes, and four and a half billion years of its abiotic and ultimately, biotic evolution. Understanding these phenomena is essential to maintenance of life on the planet. The expanding world population demands more resources; faces increasing losses from natural hazards; and releases more pollutants to the air, water, and land. Sustaining our existence requires scientific understanding of the natural materials and processes linking the geosphere, hydrosphere, atmosphere, and biosphere. Life prospers or fails at the surface of the Earth where these environments intersect.

NSF organizational taxonomy may differ from other common terminology describing disciplinary boundaries which are rapidly evolving as science continues to become more interdisciplinary. The NSF Division of Earth Sciences (EAR) is one of four divisions within the Directorate for Geosciences, along with the divisions of Atmospheric and Geospatial Sciences (AGS), Ocean Sciences (OCE) and Polar Programs (PLR). Thus NSF’s use of the term “Earth sciences” includes studies which address ‘Earth’s solid surface, crust, mantle, and core, including interactions between the solid Earth, atmosphere, hydrosphere and biosphere’ (NRC, 2012, *New Research Opportunities in the Earth Sciences*, National Academy Press, Washington, DC, 117 pp.).

Detailed descriptions of core and special research programs within the Division of Earth Sciences are available in the latest program information and funding opportunities at: http://www.nsf.gov/div/index.jsp?org=EAR

The Instrumentation and Facilities Program in the Division of Earth Sciences (EAR/IF) supports meritorious proposals for...
Development or Refinement of New Instrumentation, Techniques or Software

of the EAR/IF Program. Investigators are encouraged to examine the latest MRI solicitation (http://www.nsf.gov/od/iia/programs/mri/).

MRI typically maintains a January submission deadline each year and the goals and design of the MRI Program complement those of the EAR/IF Program. Investigators interested in seeking NSF support for the acquisition or upgrade of research equipment that is more expensive than the anticipated user fees, if any, should be included in all proposals to the EAR/IF program.

Acquisition or Upgrade of Research Equipment

in all proposals, a central goal should be to advance research and research training in the Earth sciences.

Investigators interested in seeking NSF support for the acquisition or upgrade of research equipment that is more expensive than the anticipated user fees, if any, should be included in all proposals to the EAR/IF program.

In all proposals, a central goal should be to advance research and research training in the Earth sciences.

Investigators interested in seeking NSF support for the acquisition or upgrade of research equipment that is more expensive than the anticipated user fees, if any, should be included in all proposals to the EAR/IF program.

In all proposals, a central goal should be to advance research and research training in the Earth sciences.

Investigators interested in seeking NSF support for the acquisition or upgrade of research equipment that is more expensive than the anticipated user fees, if any, should be included in all proposals to the EAR/IF program.

In all proposals, a central goal should be to advance research and research training in the Earth sciences.

Investigators interested in seeking NSF support for the acquisition or upgrade of research equipment that is more expensive than the anticipated user fees, if any, should be included in all proposals to the EAR/IF program.

Investigators interested in seeking NSF support for the acquisition or upgrade of research equipment that is more expensive than the anticipated user fees, if any, should be included in all proposals to the EAR/IF program.

In all proposals, a central goal should be to advance research and research training in the Earth sciences.

Investigators interested in seeking NSF support for the acquisition or upgrade of research equipment that is more expensive than the anticipated user fees, if any, should be included in all proposals to the EAR/IF program.

In all proposals, a central goal should be to advance research and research training in the Earth sciences.

Investigators interested in seeking NSF support for the acquisition or upgrade of research equipment that is more expensive than the anticipated user fees, if any, should be included in all proposals to the EAR/IF program.

In all proposals, a central goal should be to advance research and research training in the Earth sciences.

Investigators interested in seeking NSF support for the acquisition or upgrade of research equipment that is more expensive than the anticipated user fees, if any, should be included in all proposals to the EAR/IF program.

In all proposals, a central goal should be to advance research and research training in the Earth sciences.

Investigators interested in seeking NSF support for the acquisition or upgrade of research equipment that is more expensive than the anticipated user fees, if any, should be included in all proposals to the EAR/IF program.

In all proposals, a central goal should be to advance research and research training in the Earth sciences.
Investigators seeking to develop or refine new instrumentation, techniques and software should demonstrate that a community of geoscientists is actively interested in the new capability. Software development proposals seeking funds primarily for web service, web method, service oriented architecture or database development should be directed to the Division of Earth Science Geoinformatics Program (http://www.nsf.gov/funding/pgm_summ.jsp?pims_id=503447). EAR/IF welcomes proposals for collaborative development projects between academic and industrial partners. However, EAR/IF does not support the sole commercial development of instrumentation or capabilities.

Investigators interested in seeking NSF support for the development of new research instrumentation might also wish to investigate the Major Research Instrumentation (MRI) Program. MRI maintains a January submission deadline each year and the goals and design of the MRI Program complement those of the EAR/IF Program. Investigators are encouraged to examine the latest MRI solicitation (http://www.nsf.gov/od/ria/programs/mri/).

Support of National or Regional Multi-User Facilities

EAR/IF accepts proposals seeking support for national or regional multi-user facilities.

Investigators seeking to establish or continue support of a national or regional multi-user facility are encouraged to contact an EAR/IF Program Officer prior to submission. In general, support for national or regional multi-user facilities is intended for groups that seek to offer expensive or specialized analytical laboratory or field equipment and services to the broader geosciences community. Typically, EAR/IF looks for specialized leadership capabilities and the availability of adequate and appropriate supporting infrastructure and personnel for these proposals.

Support for Early Career Investigators

EAR/IF encourages proposals from early career investigators who seek to establish new laboratory or field equipment facilities. For such proposals, the lead PI must qualify as an early career researcher, defined as PIs in a tenure-track position but not tenured at the time of submission, although additional tenured researchers may also be included as PIs.

Via this opportunity, EAR/IF seeks to facilitate expedient development and operation of new laboratory or field equipment proposed by the next generation of leaders in the Earth Sciences. The opportunity allows for submission of a proposal prepared as an Acquisition or Upgrade of Research Equipment or Instrumentation and Technique Development submissions for expenses associated with the acquisition, upgrade or development of equipment or techniques. However, in addition to the guidelines for such proposals, Early Career Investigator proposals may include budget line items associated with support of a new full-time laboratory technician who will be dedicated to the instrument(s) being requested. Any request for technical support under this opportunity is limited to three years duration in order to encourage investigators and their host institutions to carefully plan for future alternative sources for technical support (see details described in section V.B Budgetary Information). Also, any request for the support of a technician must be justified by demonstrating that the technical demands of the instrument proposed sufficiently justify the need for availability of dedicated, full-time technical support. Proposals for Support for Early Career Investigators may budget either solely for equipment acquisition, solely for technician support, or both as described above.

III. AWARD INFORMATION

EAR/IF anticipates approximately $7,000,000 will be available annually for 30-50 new awards, subject to the availability of funds. Awards may be standard or continuing grants or cooperative agreements.

IV. ELIGIBILITY INFORMATION

Who May Submit Proposals:

The categories of proposers eligible to submit proposals to the National Science Foundation are identified in the Grant Proposal Guide, Chapter I, Section E.

Who May Serve as PI:

There are no restrictions or limits.

Limit on Number of Proposals per Organization:

There are no restrictions or limits.

Limit on Number of Proposals per PI or Co-PI:

There are no restrictions or limits.

V. PROPOSAL PREPARATION AND SUBMISSION INSTRUCTIONS

A. Proposal Preparation Instructions

Full Proposal Preparation Instructions: Proposers may opt to submit proposals in response to this Program Solicitation via Grants.gov or via the NSF FastLane system.

- Full proposals submitted via FastLane: Proposals submitted in response to this program solicitation should be prepared and submitted in accordance with the general guidelines contained in the NSF Grant Proposal Guide (GPG). The complete text of the GPG is available electronically on the NSF website at: http://www.nsf.gov/publications/pub_summ.jsp?ods_key=gpg.
Special attention should be paid to the following when submitting a proposal to EAR/IF:

1) Title

The title of the proposal should convey its main topic. Proposals for Acquisition or Upgrade of Research Equipment, Development of New Instrumentation, Techniques or Software, Support of National or Regional Multi-User Facilities, and Support for Early Career Investigators should, respectively, have titles beginning with:

"Acquisition of ..."
"Upgrade of ..."
"Development of ..."
"Facility Support: ...
"Early Career: ...

2) Project Description

Proposals for Acquisition or Upgrade of Research Equipment must include a description of the Earth science research projects of the principal investigator(s). The description of the research projects and the equipment should be comprehensive enough to allow reviewers to evaluate the merit of the research and the extent to which the equipment is essential and appropriate to the research program.

Proposals for Development of New Instrumentation, Techniques or Software must include a description of the instrument design, technique, or code development that is sufficiently detailed for reviewers to evaluate its technical capabilities and potential benefit to research in the Earth sciences.

Proposals for Support of National or Regional Multi-User Facilities must include a description of the technical capabilities of the facility and the potential impact that these capabilities may have for the on the Earth science community. The size and nature of the science community that will make principal use of the facility should also be described, along with any evidence of that community's desire to pool resources in support of the facility.

Proposals for Support for Early Career Investigators should follow guidelines above provided for proposals submitted to the Acquisition or Upgrade of Research Equipment or Development of New Instrumentation, Techniques or Software opportunities. In addition, proposals including a request for support of a full-time research technician must include a description of the laboratory and/or field responsibilities that will be assumed by the technician as well as the anticipated breakdown of the time distribution of their assignments.

3) Maintenance and Operation

Proposals for Acquisition or Upgrade of Research Equipment, Support of National or Regional Multi-User Facilities, and Support for Early Career Investigators must include a section describing the provisions for maintenance and operation of relevant laboratory or field equipment. This section should describe how and by whom the requested instrumentation is to be operated and maintained. If the instrument(s) being requested is/are for replacement of similar existing equipment, available data on user charges and related income, machine downtime, cost of instrument service contacts or available technical support should be discussed. Details regarding user scheduling decision procedures, relevant safety provisions and plans for user training should also be included. Biosketches should be included for existing or identified candidates for technical support personnel, whether or not NSF/EAR funding is requested for their support. The management plan should refer specifically to any relevant institutional support of facilities, equipment and other resources described in the appropriate section of the proposal (see GPG Chapter II C 2 i).

All proposals must describe plans for data management and sharing of the products of research. FastLane will not permit submission of a proposal that is missing a Data Management Plan. Investigators are encouraged to be familiar with the many community data and informatics efforts that have been or are supported by NSF or other agencies.

PIs for proposals that require support from the GAGE and/or SAGE Facilities must obtain formal letters of support commitment from UNAVCO and/or IRIS and include those letters as a Supplementary Document. Proposals requiring facility support but lacking such letters may be returned without review.

4) Other Resources

Paper copies of the GPG may be obtained from the NSF Publications Clearinghouse, telephone (703) 292-7827 or by e-mail from nsfpubs@nsf.gov. Proposers are reminded to identify this program solicitation number in the program solicitation block on the NSF Cover Sheet For Proposal to the National Science Foundation. Compliance with this requirement is critical to determining the relevant proposal processing guidelines. Failure to submit this information may delay processing.

Full proposals submitted via Grants.gov: Proposals submitted in response to this program solicitation via Grants.gov should be prepared and submitted in accordance with the NSF Grants.gov Application Guide: A Guide for the Preparation and Submission of NSF Applications via Grants.gov. The complete text of the NSF Grants.gov Application Guide is available on the Grants.gov website and on the NSF website at: http://www.nsf.gov/publications/pub_summ.jsp?ods_key=grantsgovguide. To obtain copies of the Application Guide and Application Forms Package, click on the Apply tab on the Grants.gov site, then click on the Apply Step 1: Download a Grant Application Package and Application Instructions link and enter the funding opportunity number, (the program solicitation number without the NSF prefix) and press the Download Package button. Paper copies of the Grants.gov Application Guide also may be obtained from the NSF Publications Clearinghouse, telephone (703) 292-7827 or by e-mail from nsfpubs@nsf.gov.

In determining which method to utilize in the electronic preparation and submission of the proposal, please note the following:

Collaborative Proposals. All collaborative proposals submitted as separate submissions from multiple organizations must be submitted via the NSF FastLane system. Chapter II, Section D.5 of the Grant Proposal Guide provides additional information on collaborative proposals.

See Chapter II.C.2 of the GPG for guidance on the required sections of a full research proposal submitted to NSF. Please note that the proposal preparation instructions provided in this program solicitation may deviate from the GPG instructions.

Special attention should be paid to the following when submitting a proposal to EAR/IF:

1) Title

The title of the proposal should convey its main topic. Proposals for Acquisition or Upgrade of Research Equipment, Development of New Instrumentation, Techniques or Software, Support of National or Regional Multi-User Facilities, and Support for Early Career Investigators should, respectively, have titles beginning with:

"Acquisition of ..."
"Upgrade of ..."
"Development of ..."
"Facility Support: ...
"Early Career: ...

2) Project Description

Proposals for Acquisition or Upgrade of Research Equipment must include a description of the Earth science research projects of the principal investigator(s). The description of the research projects and the equipment should be comprehensive enough to allow reviewers to evaluate the merit of the research and the extent to which the equipment is essential and appropriate to the research program.

Proposals for Development of New Instrumentation, Techniques or Software must include a description of the instrument design, technique, or code development that is sufficiently detailed for reviewers to evaluate its technical capabilities and potential benefit to research in the Earth sciences.

Proposals for Support of National or Regional Multi-User Facilities must include a description of the technical capabilities of the facility and the potential impact that these capabilities may have for the on the Earth science community. The size and nature of the science community that will make principal use of the facility should also be described, along with any evidence of that community's desire to pool resources in support of the facility.

Proposals for Support for Early Career Investigators should follow guidelines above provided for proposals submitted to the Acquisition or Upgrade of Research Equipment or Development of New Instrumentation, Techniques or Software opportunities. In addition, proposals including a request for support of a full-time research technician must include a description of the laboratory and/or field responsibilities that will be assumed by the technician as well as the anticipated breakdown of the time distribution of their assignments.

3) Maintenance and Operation

Proposals for Acquisition or Upgrade of Research Equipment, Support of National or Regional Multi-User Facilities, and Support for Early Career Investigators must include a section describing the provisions for maintenance and operation of relevant laboratory or field equipment. This section should describe how and by whom the requested instrumentation is to be operated and maintained. If the instrument(s) being requested is/are for replacement of similar existing equipment, available data on user charges and related income, machine downtime, cost of instrument service contacts or available technical support should be discussed. Details regarding user scheduling decision procedures, relevant safety provisions and plans for user training should also be included. Biosketches should be included for existing or identified candidates for technical support personnel, whether or not NSF/EAR funding is requested for their support. The management plan should refer specifically to any relevant institutional support of facilities, equipment and other resources described in the appropriate section of the proposal (see GPG Chapter II C 2 i).

All proposals must describe plans for data management and sharing of the products of research. FastLane will not permit submission of a proposal that is missing a Data Management Plan. Investigators are encouraged to be familiar with the many community data and informatics efforts that have been or are supported by NSF or other agencies.

PIs for proposals that require support from the GAGE and/or SAGE Facilities must obtain formal letters of support commitment from UNAVCO and/or IRIS and include those letters as a Supplementary Document. Proposals requiring facility support but lacking such letters may be returned without review.

4) Other Resources

Paper copies of the GPG may be obtained from the NSF Publications Clearinghouse, telephone (703) 292-7827 or by e-mail from nsfpubs@nsf.gov. Proposers are reminded to identify this program solicitation number in the program solicitation block on the NSF Cover Sheet For Proposal to the National Science Foundation. Compliance with this requirement is critical to determining the relevant proposal processing guidelines. Failure to submit this information may delay processing.

Full proposals submitted via Grants.gov: Proposals submitted in response to this program solicitation via Grants.gov should be prepared and submitted in accordance with the NSF Grants.gov Application Guide: A Guide for the Preparation and Submission of NSF Applications via Grants.gov. The complete text of the NSF Grants.gov Application Guide is available on the Grants.gov website and on the NSF website at: http://www.nsf.gov/publications/pub_summ.jsp?ods_key=grantsgovguide. To obtain copies of the Application Guide and Application Forms Package, click on the Apply tab on the Grants.gov site, then click on the Apply Step 1: Download a Grant Application Package and Application Instructions link and enter the funding opportunity number, (the program solicitation number without the NSF prefix) and press the Download Package button. Paper copies of the Grants.gov Application Guide also may be obtained from the NSF Publications Clearinghouse, telephone (703) 292-7827 or by e-mail from nsfpubs@nsf.gov.
a) Inventory of Existing and Technician Positions

Proposals for Acquisition or Upgrade of Research Equipment must list all comparable items of equipment to which the applicants have access at the submitting organization or elsewhere.

Existing and relevant technical support personnel in the department and their source of funding should be described with relevant biosketches included in the appropriate section.

b) Facilities, Equipment and Other Resources

In order for the EAR/IF Program, and its reviewers, to assess the scope of a proposed instrumentation or facilities project, all organizational resources necessary for, and available to a project, must be described in the Facilities, Equipment and Other Resources section of the proposal (see GPG Chapter II.C.2.i for further information).

Although these resources are not considered cost sharing as defined in 2 CFR § 200.306, the Foundation does expect that the resources identified in the Facilities, Equipment, and Other Resources section will be provided, or made available, should the proposal be funded. ¹

Proposers should include an aggregated description of the internal and external resources (both physical and personnel) that the organization and its collaborators will provide to the project, should it be funded. The description should be narrative in nature and must not include any quantifiable financial information.

¹While not required by NSF, awardee organizations may, at their own discretion, continue to contribute voluntary uncommitted cost sharing to NSF-sponsored projects. These resources are not auditable by NSF and should not be included in the proposal budget or budget justification.

5) Support of Outreach and/or Broadening Participation Activities

Focused efforts to support participation of underrepresented groups in laboratory and/or field instrument use and educational and community outreach activities are also encouraged. Proposers to EAR/IF are encouraged to explore innovative outreach efforts to broaden participation of underrepresented groups in experiential learning using state-of-the-art analytical tools and to raise awareness of available geoanalytical capabilities in the U.S. Examples could include requested support for: 1) short courses or summer institutes focused on engaging representatives of underrepresented groups (faculty and students); 2) partnering with faculty at minority serving institutions and community colleges to make instrumentation available to their students and faculty for courses and research, 3) outreach to engage K-12 educators and students in field or laboratory studies involving experiential learning using the proposed instrumentation, 4) unique webcasting, social media or other activities to promote awareness of the facilities, or 5) travel to annual conferences of professional societies focused on fostering enhanced diversity in science (e.g., National Association of Black Geoscientists (NABG): http://www.nabg-us.org, Society for the Advancement of Chicanos and Native Americans in Science (SACNAS): http://www.sacnas.org, American Indian Science and Engineering Society (AISES): http://www.aises.org).

B. Budgetary Information

Cost Sharing: Inclusion of voluntary committed cost sharing is prohibited.

Budget Preparation Instructions:

The maximum request for Acquisition or Upgrade of Research Equipment and Development of New Instrumentation, Techniques or Software proposals is $750,000. The maximum request for Support for Early Career Investigators proposals is $1,000,000. The maximum request for upgrade of research group computing facilities is $75,000. Proposals that request support in excess of the allowable maximums will be returned without review.

The budget section of proposals for Acquisition or Upgrade of Research Equipment should indicate the current price and any available discounts for the total equipment package requested, and should be itemized by major components. Relevant manufacturers’ quotes must be included in the supplementary documents section of the proposal. Proposals submitted without manufacturer price quotes may be returned without review.

The EAR/IF program will NOT support requests for:

- Costs of instrument service contracts or service agreements,
- Construction or renovation of laboratory space to be used to house requested instrumentation, or construction of experimental facilities that include significant amounts of common building materials or standard building techniques,
- Direct costs of maintaining infrastructure or building systems or general purpose systems or platforms. This includes items such as HVAC, telecommunications, electrical systems, fume hoods, elevators, storage systems,
- Instrumentation used primarily for education.

Proposals that request support for the above items may be subject to return without review.

Personnel costs directly attributable to Development of New Instrumentation, Analytical techniques or software, or to Support of National or Regional Multi-User Facilities may be requested.

Personnel costs will not be supported through grant proposals for Acquisition or Upgrade of Research Equipment. An exception includes proposals submitted to the Support for Early Career Investigators opportunity. The inclusion of technical support on such proposals is limited to three years duration for the total of salary, fringe benefits and related indirect costs. The budget justification should demonstrate how the requested NSF support will result in a new full-time technical position.

All proposals submitted to the EAR/IF Program may request up to $20,000 for Support of Outreach and/or Broadening Participation Activities to engage audiences that otherwise will not have access to the instrumentation and/or data generated and/or to support focused efforts to broaden participation of underrepresented groups in experiential learning using state-of-the-art analytical tools and/or to raise awareness of available geoanalytical capabilities in the U.S. Budgetary requests for such activities may appear over multiple categories on the NSF Budget Form but the total should not exceed $20,000 (proposals for Support of National or Regional Multi-User Facilities are exempt from this limit). The budget justification section should summarize all planned Support of Outreach and/or Broadening Participation Activities expenditures and their total separately from other line
C. Due Dates

- **Full Proposal Deadline(s) (due by 5 p.m., proposer's local time):**

  Proposals Accepted Anytime

D. FastLane/Grants.gov Requirements

For Proposals Submitted Via FastLane:

To prepare and submit a proposal via FastLane, see detailed technical instructions available at: https://www.fastlane.nsf.gov/ref/newstan.htm. For FastLane user support, call the FastLane Help Desk at 1-800-673-6188 or e-mail fastlane@nsf.gov. The FastLane Help Desk answers general technical questions related to the use of the FastLane system. Specific questions related to this program solicitation should be referred to the NSF program staff contact(s) listed in Section VIII of this funding opportunity.

For Proposals Submitted Via Grants.gov:

Before using Grants.gov for the first time, each organization must register to create an institutional profile. Once registered, the applicant's organization can then apply for any federal grant on the Grants.gov website. Comprehensive information about using Grants.gov is available on the Grants.gov Applicant Resources webpage: http://www.grants.gov/web/grants/applicants.html. In addition, the NSF Grants.gov Application Guide (see link in Section V.A) provides instructions regarding the technical preparation of proposals via Grants.gov. For Grants.gov user support, contact the Grants.gov Contact Center at 1-800-518-4726 or by email: support@grants.gov. The Grants.gov Contact Center answers general technical questions related to the use of Grants.gov. Specific questions related to this program solicitation should be referred to the NSF program staff contact(s) listed in Section VIII of this funding opportunity.

**Submitting the Proposal:** Once all documents have been completed, the Authorized Organizational Representative (AOR) must submit the application to Grants.gov and verify the desired funding opportunity and agency to which the application is submitted. The AOR must then sign and submit the application to Grants.gov. The completed application will be transferred to the NSF FastLane system for further processing.

Proposers that submitted via FastLane are strongly encouraged to use FastLane to verify the status of their submission to NSF. For proposers that submitted via Grants.gov, until an application has been received and validated by NSF, the Authorized Organizational Representative may check the status of an application on Grants.gov. After proposers have received an e-mail notification from NSF, Research.gov should be used to check the status of an application.

VI. NSF PROPOSAL PROCESSING AND REVIEW PROCEDURES

Proposals received by NSF are assigned to the appropriate NSF program for acknowledgement and, if they meet NSF requirements, for review. All proposals are carefully reviewed by a scientist, engineer, or educator serving as an NSF Program Officer, and usually by three to ten other persons outside NSF either as ad hoc reviewers, panelists, or both, who are experts in the particular fields represented by the proposal. These reviewers are selected by Program Officers charged with oversight of the review process. Proposers are invited to suggest names of persons they believe are especially well qualified to review the proposal and/or persons they would prefer not review the proposal. These suggestions may serve as one source in the reviewer selection process at the Program Officer's discretion. Submission of such names, however, is optional. Care is taken to ensure that reviewers have no conflicts of interest with the proposal. In addition, Program Officers may obtain comments from site visits before recommending final action on proposals. Senior NSF staff further review recommendations for awards. A flowchart that depicts the entire NSF proposal and award process (and associated timeline) is included in the GPG as Exhibit III-1.

A comprehensive description of the Foundation's merit review process is available on the NSF website at: http://nsf.gov/bfa/dias/policy/merit_review/.

Proposers should also be aware of core strategies that are essential to the fulfillment of NSF’s mission, as articulated in *Investing in Science, Engineering, and Education for the Nation’s Future: NSF Strategic Plan for 2014-2018*. These strategies are integrated in the program planning and implementation process, of which proposal review is one part. NSF’s mission is particularly well-implemented through the integration of research and education and broadening participation in NSF programs, projects, and activities.

One of the strategic objectives in support of NSF’s mission is to foster integration of research and education through the programs, projects, and activities it supports at academic and research institutions. These institutions must recruit, train, and prepare a diverse STEM workforce to advance the frontiers of science and participate in the U.S. technology-based economy. NSF’s contribution to the national innovation ecosystem is to provide cutting-edge research under the guidance of the Nation’s most creative scientists and engineers. NSF also supports development of a strong science, technology, engineering, and mathematics (STEM) workforce by investing in building the knowledge that informs improvements in STEM teaching and learning.

NSF’s mission calls for the broadening of opportunities and expanding participation of groups, institutions, and geographic regions that are underrepresented in STEM disciplines, which is essential to the health and vitality of science and engineering. NSF is committed to this principle of diversity and deems it central to the programs, projects, and activities it considers and supports.

A. Merit Review Principles and Criteria

The National Science Foundation strives to invest in a robust and diverse portfolio of projects that creates new knowledge and enables breakthroughs in understanding across all areas of science and engineering research and education. To identify which projects to support, NSF relies on a merit review process that incorporates consideration of both the technical aspects of a proposed
project and its potential to contribute more broadly to advancing NSF's mission "to promote the progress of science; to advance the national health, prosperity, and welfare; to secure the national defense; and for other purposes." NSF makes every effort to conduct a fair, competitive, transparent merit review process for the selection of projects.

1. Merit Review Principles

These principles are to be given due diligence by PIs and organizations when preparing proposals and managing projects, by reviewers when reading and evaluating proposals, and by NSF program staff when determining whether or not to recommend proposals for funding and while overseeing awards. Given that NSF is the primary federal agency charged with nurturing and supporting excellence in basic research and education, the following three principles apply:

- All NSF projects should be of the highest quality and have the potential to advance, if not transform, the frontiers of knowledge.
- NSF projects, in the aggregate, should contribute more broadly to achieving societal goals. These "Broader Impacts" may be accomplished through the research itself, through activities that are directly related to specific research projects, or through activities that are supported by, but are complementary to, the project. The project activities may be based on previously established and/or innovative methods and approaches, but in either case must be well justified.
- Meaningful assessment and evaluation of NSF funded projects should be based on appropriate metrics, keeping in mind the likely correlation between the effect of broader impacts and the resources provided to implement projects. If the size of the activity is limited, evaluation of that activity in isolation is not likely to be meaningful. Thus, assessing the effectiveness of these activities may best be done at a higher, more aggregated, level than the individual project.

With respect to the third principle, even if assessment of Broader Impacts outcomes for particular projects is done at an aggregated level, PIs are expected to be accountable for carrying out the activities described in the funded project. Thus, individual projects should include clearly stated goals, specific descriptions of the activities that the PI intends to do, and a plan in place to document the outputs of those activities.

These three merit review principles provide the basis for the merit review criteria, as well as a context within which the users of the criteria can better understand their intent.

2. Merit Review Criteria

All NSF proposals are evaluated through use of the two National Science Board approved merit review criteria. In some instances, however, NSF will employ additional criteria as required to highlight the specific objectives of certain programs and activities.

The two merit review criteria are listed below. Both criteria are to be given full consideration during the review and decision-making processes; each criterion is necessary but neither, by itself, is sufficient. Therefore, proposers must fully address both criteria. (GPG Chapter II.C.2.d.i. contains additional information for use by proposers in development of the Project Description section of the proposal.) Reviewers are strongly encouraged to review the criteria, including GPG Chapter II.C.2.d.i., prior to the review of a proposal.

When evaluating NSF proposals, reviewers will be asked to consider what the proposers want to do, why they want to do it, how they plan to do it, how they will know if they succeed, and what benefits could accrue if the project is successful. These issues apply both to the technical aspects of the proposal and the way in which the project may make broader contributions. To that end, reviewers will be asked to evaluate all proposals against two criteria:

- Intellectual Merit: The Intellectual Merit criterion encompasses the potential to advance knowledge; and
- Broader Impacts: The Broader Impacts criterion encompasses the potential to benefit society and contribute to the achievement of specific, desired societal outcomes.

The following elements should be considered in the review for both criteria:

1. What is the potential for the proposed activity to
   a. Advance knowledge and understanding within its own field or across different fields (Intellectual Merit); and
   b. Benefit society or advance desired societal outcomes (Broader Impacts)?
2. To what extent do the proposed activities suggest and explore creative, original, or potentially transformative concepts?
3. Is the plan for carrying out the proposed activities well-reasoned, well-organized, and based on a sound rationale? Does the plan incorporate a mechanism to assess success?
4. How well qualified is the individual, team, or organization to conduct the proposed activities?
5. Are there adequate resources available to the PI (either at the home organization or through collaborations) to carry out the proposed activities?

Broader impacts may be accomplished through the research itself, through the activities that are directly related to specific research projects, or through activities that are supported by, but are complementary to, the project. NSF values the advancement of scientific knowledge and activities that contribute to achievement of societally relevant outcomes. Such outcomes include, but are not limited to: full participation of women, persons with disabilities, and underrepresented minorities in science, technology, engineering, and mathematics (STEM); improved STEM education and educator development at any level; increased public scientific literacy and public engagement with science and technology; improved well-being of individuals in society; development of a diverse, globally competitive STEM workforce; increased partnerships between academia, industry, and others; improved national security; increased economic competitiveness of the United States; and enhanced infrastructure for research and education.

Proposers are reminded that reviewers will also be asked to review the Data Management Plan and the Postdoctoral Researcher Mentoring Plan, as appropriate.

Additional Solicitation Specific Review Criteria

In addition to the general NSF merit review criteria (intellectual merit/broader impacts), criteria considered in the evaluation of all proposals submitted to EAR/IF include:

- the intrinsic merit of the Earth science research that will benefit from the equipment, technique, or multi-user facility;
- the number of investigators who will substantially benefit from the equipment, technique, or multi-user facility, and the strength of their Earth science research programs;
- the degree to which the equipment, technique, or multi-user facility is appropriate and essential for the intended Earth science research;
- the degree to which core research projects supported by the Division of Earth Sciences will benefit from the proposed equipment, technique, or multi-user facility;
- the adequacy of the management plan describing the ability to operate and maintain complex equipment during its expected lifetime and the adequacy of the facilities, equipment and other resources provided as institutional support to carry out the
An additional criterion considered in the evaluation of proposals submitted to EAR/IF for Support of National or Regional Multi-
User Facilities includes:

- the ability to provide access to a facility intended to serve a national or regional research community.

### B. Review and Selection Process

Proposals submitted in response to this program solicitation will be reviewed by Ad hoc Review and/or Panel Review.

Reviewers will be asked to evaluate proposals using two National Science Board approved merit review criteria and, if applicable, 
additional program specific criteria. A summary rating and accompanying narrative will be completed and submitted by each 
reviewer. The Program Officer assigned to manage the proposal's review will consider the advice of reviewers and will formulate a recommendation.

After scientific, technical and programmatic review and consideration of appropriate factors, the NSF Program Officer recommends to 
the cognizant Division Director whether the proposal should be declined or recommended for award. NSF strives to be able to tell 
teachers whether their proposals have been declined or recommended for funding within six months. Large or particularly complex 
proposals or proposals from new awardees may require additional review and processing time. The time interval begins on the 
deadline or target date, or receipt date, whichever is later. The interval ends when the Division Director acts upon the Program 
Officer's recommendation.

After programmatic approval has been obtained, the proposals recommended for funding will be forwarded to the Division of Grants 
and Agreements for review of business, financial, and policy implications. After an administrative review has occurred, Grants and 
Agreements Officers perform the processing and issuance of a grant or other agreement. Proposers are cautioned that only a Grants 
and Agreements Officer may make commitments, obligations or awards on behalf of NSF or authorize the expenditure of funds. No 
commitment on the part of NSF should be inferred from technical or budgetary discussions with a NSF Program Officer. A Principal 
Investigator or organization that makes financial or personnel commitments in the absence of a grant or cooperative agreement 
signed by the NSF Grants and Agreements Officer does so at their own risk.

Once an award or declination decision has been made, Principal Investigators are provided feedback about their proposals. In all 
cases, reviews are treated as confidential documents. Verbatim copies of reviews, excluding the names of the reviewers or any 
reviewer-identifying information, are sent to the Principal Investigator/Project Director by the Program Officer. In addition, the 
proposer will receive an explanation of the decision to award or decline funding.
organizational), publications, and other specific products and impacts of the project. Submission of the report via Research.gov constitutes certification by the PI that the contents of the report are accurate and complete. The project outcomes report also must be prepared and submitted using Research.gov. This report serves as a brief summary, prepared specifically for the public, of the nature and outcomes of the project. This report will be posted on the NSF website exactly as it is submitted by the PI.

VIII. AGENCY CONTACTS

Please note that the program contact information is current at the time of publishing. See program website for any updates to the points of contact.

General inquiries regarding this program should be made to:

- Russell C. Kelz, Program Director, 790 N, telephone: (703) 292-4747, fax: (703) 292-9023, email: rkelz@nsf.gov
- David D. Lambert, Program Director, 790 N, telephone: (703) 292-8558, fax: (703) 292-9023, email: dlambert@nsf.gov
- Herbert F. Wang, telephone: (703) 292-4742, email: hfwang@nsf.gov

For questions related to the use of FastLane, contact:

- FastLane Help Desk, telephone: 1-800-673-6188; e-mail: fastlane@nsf.gov.

For questions relating to Grants.gov contact:

- Grants.gov Contact Center: If the Authorized Organizational Representatives (AOR) has not received a confirmation message from Grants.gov within 48 hours of submission of application, please contact via telephone: 1-800-518-4726; e-mail: support@grants.gov.

IX. OTHER INFORMATION

The NSF website provides the most comprehensive source of information on NSF Directorates (including contact information), programs and funding opportunities. Use of this website by potential proposers is strongly encouraged. In addition, "NSF Update" is an information-delivery system designed to keep potential proposers and other interested parties apprised of new NSF funding opportunities and publications, important changes in proposal and award policies and procedures, and upcoming NSF Grants Conferences. Subscribers are informed through e-mail or the user's Web browser each time new publications are issued that match their identified interests. "NSF Update" also is available on NSF's website at https://public.govdelivery.com/accounts/USNSF/subscriber/new?topic_id=USNSF_179.

Grants.gov provides an additional electronic capability to search for Federal government-wide grant opportunities. NSF funding opportunities may be accessed via this mechanism. Further information on Grants.gov may be obtained at http://www.grants.gov.

ABOUT THE NATIONAL SCIENCE FOUNDATION

The National Science Foundation (NSF) is an independent Federal agency created by the National Science Foundation Act of 1950, as amended (42 USC 1861-75). The Act states the purpose of the NSF is "to promote the progress of science; [and] to advance the national health, prosperity, and welfare by supporting research and education in all fields of science and engineering."

NSF funds research and education in most fields of science and engineering. It does this through grants and cooperative agreements to more than 2,000 colleges, universities, K-12 school systems, businesses, informal science organizations and other research organizations throughout the US. The Foundation accounts for about one-fourth of Federal support to academic institutions for basic research.

NSF receives approximately 55,000 proposals each year for research, education and training projects, of which approximately 11,000 are funded. In addition, the Foundation receives several thousand applications for graduate and postdoctoral fellowships. The agency operates no laboratories itself but does support National Research Centers, user facilities, certain oceanographic vessels and Arctic and Antarctic research stations. The Foundation also supports cooperative research between universities and industry, US participation in international scientific and engineering efforts, and educational activities at every academic level.

Facilitation Awards for Scientists and Engineers with Disabilities provide funding for special assistance or equipment to enable persons with disabilities to work on NSF-supported projects. See Grant Proposal Guide Chapter II, Section D.2 for instructions regarding preparation of these types of proposals.

The National Science Foundation has Telephonic Device for the Deaf (TDD) and Federal Information Relay Service (FIRS) capabilities that enable individuals with hearing impairments to communicate with the Foundation about NSF programs, employment or general information. TDD may be accessed at (703) 292-5090 and (800) 281-8749, FIRS at (800) 877-8339.

The National Science Foundation Information Center may be reached at (703) 292-5111.

The National Science Foundation promotes and advances scientific progress in the United States by competitively awarding grants and cooperative agreements for research and education in the sciences, mathematics, and engineering.

To get the latest information about program deadlines, to download copies of NSF publications, and to access abstracts of
awards, visit the NSF Website at http://www.nsf.gov

**PRIVACY ACT AND PUBLIC BURDEN STATEMENTS**

The information requested on proposal forms and project reports is solicited under the authority of the National Science Foundation Act of 1950, as amended. The information on proposal forms will be used in connection with the selection of qualified proposals; and project reports submitted by awardees will be used for program evaluation and reporting within the Executive Branch and to Congress. The information requested may be disclosed to qualified reviewers and staff assistants as part of the proposal review process; to proposer institutions/grantees to provide or obtain data regarding the proposal review process, award decisions, or the administration of awards; to government contractors, experts, volunteers and researchers and educators as necessary to complete assigned work; to other government agencies or other entities needing information regarding applicants or nominees as part of a joint application review process, or in order to coordinate programs or policy; and to another Federal agency, court, or party in a court or Federal administrative proceeding if the government is a party. Information about Principal Investigators may be added to the Reviewer file and used to select potential candidates to serve as peer reviewers or advisory committee members. See Systems of Records, NSF-50, “Principal Investigator/Proposal File and Associated Records,” 69 Federal Register 26410 (May 12, 2004), and NSF-51, “Reviewer/Proposal File and Associated Records,” 69 Federal Register 26410 (May 12, 2004). Submission of the information is voluntary. Failure to provide full and complete information, however, may reduce the possibility of receiving an award.

An agency may not conduct or sponsor, and a person is not required to respond to, an information collection unless it displays a valid Office of Management and Budget (OMB) control number. The OMB control number for this collection is 3145-0058. Public reporting burden for this collection of information is estimated to average 120 hours per response, including the time for reviewing instructions. Send comments regarding the burden estimate and any other aspect of this collection of information, including suggestions for reducing this burden, to:

Suzanne H. Plimpton
Reports Clearance Officer
Office of the General Counsel
National Science Foundation
Arlington, VA 22230
