Discovery Research PreK-12 (DRK-12)

PROGRAM SOLICITATION
NSF 15-592

REPLACES DOCUMENT(S):
NSF 13-601

National Science Foundation
Directorate for Education & Human Resources
Research on Learning in Formal and Informal Settings

Full Proposal Deadline(s) (due by 5 p.m. submitter's local time):

- December 07, 2015
- December 05, 2016
- First Monday in December, Annually Thereafter

IMPORTANT INFORMATION AND REVISION NOTES

Revisions to this Solicitation:

1. Replaces the Implementation Strand with two new types of proposals: Impact Studies and Implementation and Improvement Studies.
2. Clarifies the description of what is meant by Exploratory and Full Design and Development proposals and emphasizes that the research and development plans are integral to the project.
3. Creates three levels of funding.
4. Clarifies the name of the program to highlight that the program accepts proposals on formal early childhood education.

Any proposal submitted in response to this solicitation should be submitted in accordance with the revised NSF Proposal & Award Policies & Procedures Guide (PAPPG) (NSF 16-1), which is effective for proposals submitted, or due, on or after January 25, 2016.

SUMMARY OF PROGRAM REQUIREMENTS

General Information

Program Title:
Discovery Research PreK-12 (DRK-12)

Synopsis of Program:

The Discovery Research PreK-12 program (DRK-12) seeks to significantly enhance the learning and teaching of science, technology, engineering and mathematics (STEM) by PreK-12 students and teachers, through research and development of STEM education innovations and approaches. Projects in the DRK-12 program build on fundamental research in STEM education and prior research and development efforts that provide theoretical and empirical justification for proposed projects. Projects should result in research-informed and field-tested outcomes and products that inform teaching and learning. Teachers and students who participate in DRK-12 studies are expected to enhance their understanding and use of STEM content, practices and skills.

DRK-12 invites proposals that address immediate challenges that are facing preK-12 STEM education as well as those that anticipate radically different structures and functions of preK 12 teaching and learning. The DRK-12 program has three major research and development strands: (1) Assessment; (2) Learning; and (3) Teaching. The program recognizes the synergy among the three strands and that there is some overlap among them. However, PIs should identify a clear focus of the proposed research efforts (i.e., assessment, learning, or teaching) consistent with the proposal’s main objectives and research questions. The program supports five types of projects: (1) Exploratory, (2) Design and Development, (3) Impact, (4) Implementation and Improvement, and (5) Conferences and Syntheses. All five types of projects apply to each of the three DRK-12 strands.

Cognizant Program Officer(s):

Please note that the following information is current at the time of publishing. See program website for any updates to the points of contact.

- Inquiries can be made to, telephone: (703)292-8620, email: DRLDRK12@nsf.gov
- David Campbell, telephone: (703) 292-5093, email: dcampbel@nsf.gov
Applicable Catalog of Federal Domestic Assistance (CFDA) Number(s):
- 47.076 --- Education and Human Resources

**Award Information**

**Anticipated Type of Award:** Standard Grant or Continuing Grant

**Estimated Number of Awards:** 35 to 45 per year. It is anticipated that about 10-15 Level I awards, 15-20 Level II awards 5-10 Level III awards, and 5 Conference/Synthesis awards will be made in FY 2016, pending availability of funds.

**Anticipated Funding Amount:** $50,000,000

Pending availability of funds, NSF anticipates having approximately $100,000,000 available over the two fiscal year period FY2016-2017 for support of the DRK-12 portfolio. Approximately $50,000,000 will be available for the FY2016 competition and approximately $50,000,000 will be available for the FY2017 competition.

Normal limits for funding requests of DRK-12 proposals are as follows: (1) Level I projects up to $450,000 with duration up to three years; (2) Level II projects up to $3,000,000 with duration up to four years; and (3) Level III projects up to $5,000,000 with duration up to five years. The three levels of funding should align with the maturity of the proposed work, the size and scope of the empirical effort, as well as the capacity of the interdisciplinary team to conduct the proposed research.

**Eligibility Information**

**Who May Submit Proposals:**

The categories of proposers eligible to submit proposals to the National Science Foundation are identified in the Grant Proposal Guide, Chapter I, Section E.

**Who May Serve as PI:**

There are no restrictions or limits.

**Limit on Number of Proposals per Organization:**

There are no restrictions or limits.

**Limit on Number of Proposals per PI or Co-PI:**

There are no restrictions or limits.

**Proposal Preparation and Submission Instructions**

**A. Proposal Preparation Instructions**

- **Letters of Intent:** Not required

- **Preliminary Proposal Submission:** Not required

- **Full Proposals:**

**B. Budgetary Information**
Cost Sharing Requirements:
Inclusion of voluntary committed cost sharing is prohibited.

Indirect Cost (F&A) Limitations:
Not Applicable

Other Budgetary Limitations:
Not Applicable

C. Due Dates

- Full Proposal Deadline(s) (due by 5 p.m. submitter's local time):
  - December 07, 2015
  - December 05, 2016
  - First Monday in December, Annually Thereafter

Proposal Review Information Criteria

Merit Review Criteria:
National Science Board approved criteria apply.

Award Administration Information

Award Conditions:
Standard NSF award conditions apply.

Reporting Requirements:
Standard NSF reporting requirements apply.

I. INTRODUCTION

The goal of the Discovery Research PreK-12 program (DRK-12) is to catalyze research and development of science, technology, engineering and mathematics (STEM) education innovations or approaches that can serve as models for use by the nation’s formal STEM education infrastructure (e.g., schools, districts, states, teachers). The intent of the DRK-12 program is to: (1) catalyze new
approaches to STEM learning, teaching, and assessment; (2) build understanding about developing students’ 21st-century STEM skills; and (3) provide multiple pathways and resources in a variety of learning environments to study the learning process itself. DRK-12 is committed to research and development that informs strategies to attract and retain a diverse population of students in STEM fields of study.

Projects in the DRK-12 program build on fundamental research in STEM education and prior research and development efforts that provide theoretical and empirical justification for proposed projects. Teachers and students who participate in DRK-12 studies are expected to enhance their understanding and use of STEM content, practices, and skills. DRK-12 invites proposals that address immediate challenges that are facing PreK-12 STEM education, as well as those that anticipate radically different structures and functions of PreK-12 teaching, learning, and assessment. The projects funded by DRK-12 should reflect the needs of the increasingly diverse population—as well as national, state, or discipline priorities—and contribute to the research base in STEM education by studying how students and teachers learn through well-articulated STEM education innovations with clear theories of action. DRK-12 projects are expected to contribute to both theory and practice. Therefore, projects are expected to result in peer-reviewed research and practice publications, as well as innovations or approaches that could be used by others.

II. PROGRAM DESCRIPTION

For DRK-12 proposals, a wide range of potential STEM education innovations and approaches are possible including policies, instructional or professional development programs, interventions, practices, curriculum, professional development models, assessment systems, technologies, and combinations of approaches to improve STEM learning and learning environments for students in preK-12 formal education.

As a research and development program, DRK-12 contributes to knowledge of how STEM education innovations or approaches are designed, engineered, and tested. The emphasis is on what works, for whom, and under what conditions. The DRK-12 program not only contributes to the development of innovations or approaches that are useable and useful for PreK-12 students and teachers, but also to the generation of new knowledge about the nature of STEM learning and learning environments. Research and development plans are integral to every project description.

STEM is an acronym for Science, Technology, Engineering, and Mathematics. The term is used as shorthand for referring to all four of these domains. The DRK-12 program is receptive to proposals that focus on any of the four domains. STEM does not imply that proposals must address all four domains. However, proposals that have an interdisciplinary focus on two, three, or all four of these domains are welcome as well. DRK-12’s contributions to the knowledge base in education differ from the EHR Core Research program (ECR). The focus of DRK-12 research is on the translation of foundational and early stage research into research and designs of STEM education innovations or approaches, studies of their efficacy or effectiveness, and implementation research that allows for understanding of adaptation and use. DRK-12 differs from the ECR in its focus on the research and development of products and processes that have ultimate use in PreK-12 schools and pre- and in-service teacher preparation and professional development settings.

The DRK-12 program is primarily concerned with the goals and effectiveness of formal education, but recognizes that learning is not limited to formal school environments and regular school schedules or populations. The program encourages proposals to draw from knowledge and practice of learning in out-of-school and informal settings to enhance learning and teaching in formal settings. Also, DRK-12 has a focus on PreK through the end of high school, but the connection to college and career-readiness standards ties the work of many projects to post-secondary or adult basic education.

The DRK-12 program has three research and development strands: (1) Assessment; (2) Learning; and (3) Teaching. The DRK-12 program recognizes that there is some overlap among the strands in the activities involved in a project, but there should be a clear focus of the research and development efforts. Collectively, the three strands foster the creation of a new generation of STEM education innovations or approaches. These innovations or approaches take full advantage of the rich research base on STEM learning, the capabilities of modern technologies to enhance the education of PreK-12 learners and teachers, and emerging scientific and mathematical discoveries.

The DRK-12 program seeks to maintain a balanced portfolio by supporting projects ranging from those with immediate applicability to those that anticipate and provide the foundation for PreK-12 STEM education as it could be in future decades. Need to describe ideas, concepts, theories, practices, and research and development that challenge existing assumptions about STEM learning. Proposals that envision changes in education in future decades, teaching, and assessment. Such proposals could, for example, offer the promise of being dramatically more effective with the diversity of learners that are represented in our nation. Proposals that address immediate and pressing challenges typically develop and study STEM education innovations and approaches that could be implemented and used by educators in the relatively near term, albeit in highly innovative ways.

The program supports five types of projects: (1) Exploratory, (2) Design and Development, (3) Impact, (4) Implementation and Improvement, and (5) Conferences and Syntheses. All five types of projects apply to each of the three DRK-12 strands.

Information on current DRK-12 projects can be found at www.cadrek12.org and at NSF Award Search.

DRK-12 Program Strands

All DRK-12 proposals should be well grounded in the findings of STEM education research; be supported by a well-articulated framework that is based on a specific theory of learning and teaching; be guided by a specific research question, set of questions, or hypotheses; use appropriate and rigorous research and development designs; and employ appropriate forms of analysis.

(1) Assessment Strand:

Numerous reports have highlighted the need for new and more sensitive assessments in a range of areas. These include the emphases of college- and career-readiness standards on new STEM content and practices, emerging science and mathematics concepts, and new technologies. Proposals in this strand may focus on students, teachers, or both. The focus may be on one grade level or across levels. The content and practice focus may be within a discipline or across disciplines. Proposals should discuss how the project will ensure that the resulting assessments: (1) measure important constructs; (2) are valid and reliable; and (3) are fair and culturally and linguistically sensitive. DRK-12 encourages proposals that develop and study assessments that:

- focus on formative assessments that help teachers provide guidance to students and inform teacher decision-making;
- provide teachers with dynamic diagnostic information about student learning in real-time;

www.cadrek12.org
• measure students’ knowledge of core STEM disciplinary ideas unifying concepts and practices;
• measure students’ affective constructs, such as engagement, persistence, values and attitudes toward STEM disciplines;
• evaluate skills and practices that are critical for success in STEM, such as collaboration, modeling, complex problem solving, and design;
• measure teaching and learning and other outcomes in ways that are embedded within cyber-enabled learning environments, including virtual environments, online classes, simulations and games;
• are instructionally sensitive in that they measure changes in student learning as a result of different types of educational experiences;
• probe teachers’ knowledge of core and emerging STEM content, pedagogical content knowledge and practices; or
• measure teaching of STEM content in a range of formal learning environments.

(2) Learning Strand:
Well-designed STEM education innovations and approaches to enhance student learning of STEM are crucial to excellent PreK-12 STEM education. Well-grounded STEM education innovations or approaches are needed for effective implementation of the new college- and career-readiness standards that provide all students with opportunities to learn recommended concepts and practices. At the same time, new and exciting discoveries are being made in the STEM disciplines. Large amounts of scientific data are now available for use by learners of all ages. STEM education innovations and approaches are needed that help PreK-12 students access and understand these information sources and new discoveries and may take advantage of the enormous potential of new and emerging technologies.

DRK-12 seeks proposals that consider ways in which STEM innovations and approaches could be designed and implemented in a range of learning environments that enhance student learning. DRK-12 encourages proposals that research and develop STEM education innovations or approaches to student learning that:

• can be implemented in current classrooms, schools, and other learning environments for PreK-12 students by: describing how the proposed STEM education innovations and approaches align with current curriculum frameworks and other requirements; showing how they can significantly enhance student learning of the current standards and practices; and demonstrating the potential to significantly enhance outcomes for student learning;
• re-envision classrooms, schools and other learning environments for PreK-12 students by: describing how the proposed STEM education innovations and approaches challenge current practices and standards; focusing on emerging STEM concepts and practices that are outside the scope of existing school curricula; explaining how the STEM education approaches and innovations are likely to be potentially transformative; or
• dramatically increase broader participation in STEM by discussing how the approach is particularly suitable to the target population.

(3) Teaching Strand:
The DRK-12 program recognizes that a well-prepared and well-supported teacher workforce is crucial to excellent PreK-12 STEM education. The challenges and opportunities for teachers are enormous. Teachers need support to learn about new discoveries in the STEM disciplines and pedagogical techniques to enhance student learning of STEM content and practices. Technology offers opportunities for teachers to collaborate with others, access and use data for instructional purposes, and provide their students innovative learning tools. Because the student population is increasingly diverse, pre- and in-service teachers need support to teach in ways that make learning accessible to all students.

The DRK-12 program seeks proposals to research and develop STEM education innovations and approaches to teacher pre- and in-service education. These innovations and approaches should support career-long learning by PreK-12 teachers with the potential for successful diffusion and future scaling. The program DRK-12 encourages proposals that research and develop STEM education innovations and approaches:

• to improve instructional practices aimed at increasing STEM students’ learning and outcomes;
• to recruit, certify, induct, and retain STEM teachers;
• to help pre- and in-service teachers develop STEM content and pedagogical content knowledge to improve instructional practice;
• to share teaching expertise and to develop teacher leadership within schools and districts and across the broader national teacher community; or
• to develop teachers’ capability to productively customize curriculum to meet standards and the needs of diverse student populations.

DRK-12 Proposal Types
The DRK-12 program invites proposals for five types of projects: (1) Exploratory Studies; (2) Design and Development Studies; (3) Implementation and Improvement Studies and, (5) Conferences and Synthesis. These types of projects are applicable to all strands.

Exploratory Studies
Exploratory Studies provide investigators with opportunities to investigate approaches to STEM education problems that establish the basis for design and development of STEM education innovations or approaches. Exploratory Studies allow researchers to establish initial connections to or among the outcomes of interest related to STEM assessment, learning or teaching. Goals from Exploratory Studies must include providing:

• evidence of the factors associated with STEM education or learning outcomes, including potentially moderating or mediating factors, to establish the basis for design and development of STEM education innovations or approaches;
• a well-specified, empirically supported, conceptual framework or theory of action that describes the innovation or approach's assumptions, central design features, anticipated effects these features elicit, and explanations that relate features to effects. A theory of action may include factors associated with STEM learning outcomes or with moderating or mediating features of the innovation or approach; and
• a basis, derived from the empirical evidence, for pursuing a Design and Development, Impact, or Implementation and Improvement Study, or the need for further research.

The DRK-12 Exploratory proposals are consistent with the Early Stages and Exploratory type of research and development in the Common Guidelines for Educational Research and Development.

Design and Development Studies
The goal of Design and Development Studies is to research and develop new or improved STEM education innovations or approaches to achieve specific goals related to assessment, learning, or teaching. Design and Development proposals build on
evidence from prior research and development studies.

Early Stage Design and Development Studies

Early Stage Design and Development Studies seek to research and develop a proof of concept that one can develop STEM education innovations or approaches based on a well-specified theory of action. Goals of Early Stage Design and Development Studies must include providing:

- a prototype or early version of the proposed STEM education innovation or approach
- a clearly articulated theory of action that describes the innovation or approach's assumptions, central design features, anticipated effects these features elicit, and explanations that relate features to effects. Anticipated effects can include specific learning outcomes, but may also include mediating aspects of learning environments such as patterns of discourse or participation
- evidence supporting or refuting key assumptions about the theory of action underlying the STEM education innovation or approach.

Late Stage Design and Development Studies

These proposals begin with STEM education innovations or approaches that have already demonstrated promise in small sets of classrooms, schools, or other learning settings. Goals of Late Stage Design and Development must include providing:

- fully developed STEM education innovations or approaches that have evidence of feasibility and utility for practice
- completed products, ready for implementation by others who request them; and
- evidence of promise from field studies.

DRK-12 Design and Development proposals are consistent with the Design and Development type of research and development in the Common Guidelines for Educational Research and Development.

Impact Studies

Impact Studies expand the evidence of promise from previous studies to provide more rigorous measures of the strength of the STEM education innovation or approach to achieve its intended outcomes through efficacy or effectiveness studies. An efficacy study examines the impact of a STEM education innovation or approach under ideal conditions; while an effectiveness study examines that impact under normal educational contexts and settings.

Proposals for Impact Studies should provide a clear description of the STEM education innovation or approach to be tested and a compelling rationale for examining its impact including:

- the problem the STEM education innovation or approach is attempting to address;
- how the STEM education innovation or approach is different from other approaches to the problem; and
- why the STEM education innovation or approach is appropriate for an efficacy or effectiveness study.

Goals of Impact Studies must include reliable estimates of the average impact of the STEM education innovation or approach through reporting that is consistent with expectations of making causal claims (e.g., What Works Clearinghouse author reporting guidelines, Horizon Research Inc. reporting guidelines, AERA report on causal claims). These reports must include documentation of both the STEM education innovation or approach and the control or comparison condition in sufficient detail for readers to judge the applicability of the study findings to broader cases.

DRK-12 Impact Studies proposals are consistent with the Impact Studies type of research and development in the Common Guidelines for Educational Research and Development.

Implementation and Improvement Studies

Implementation and Improvement Research aims to strengthen the capacity of an organization to reliably produce valued STEM education outcomes for diverse groups of students, educated by different teachers from varied organizational contexts. The focus is more broadly on making STEM education innovations or approaches succeed when implemented at scale. These studies have less prescriptive research designs and methods, with research occurring in rapid, iterative, and context-expanding cycles. Implementation and Improvement Studies require deep engagement of researchers and practitioners during the collaborative research on problems of practice that are co-defined and of value to researchers and education agencies, for example, a school district or community of schools. Implementation and Improvement Research seeks to:

- study implementation in the local context;
- employ rapid changes in implementation with short-cycle methods;
- capitalize on variation in educational contexts to address the sources of variability in outcomes to understand what works, for whom, and under what conditions;
- address organizational structures and processes and their relation to innovation;
- employ measurement of change ideas, key drivers, and outcomes to continuously test working theories and to learn whether specific changes actually produce improvement; and
- reform the system in which the approach is being implemented as opposed to overlaying a specific approach on an existing system.

Goals of Implementation and Improvement Studies must include providing:

- strategies for improvement or implementation that address the shared goal of the researcher/practitioner collaborators;
- conceptual frameworks that address issues of scale, human capacity, and technical support for implementation and improvement in educational systems;
- measures of organizational learning that assess the progress of implementation and improvement;
- sustainable communities that can support implementation and improvement in the targeted educational system; and
- documented practices with an ongoing forum for continued engagement of collaborators from various levels of the educational system.

Conferences and Syntheses

Conferences and Synthesis proposals related to the mission of the DRK-12 program are also supported under this solicitation. Conferences should be well focused, related to the goals of the program, and generate a product usable by researchers or practitioners. Synthesis proposals should address important research, development, and implementation research findings in STEM education and should result in products usable by multiple audiences of educators. DRK-12 particularly encourages synthesis proposals that provide research findings and recommendations that are useful to STEM education practitioners and decision makers.
Selected Resources

DRK-12 and other programs fund resources and infrastructure centers to assist their current and prospective PIs in writing grants, connecting to each other and finding resources. Feel free to review these as you develop your ideas for possible submission to the DRK-12 program.

- The Community for Advancing Discovery Research in Education (CADRE) has as its mission to support and connect researchers and developers in K-12 STEM education. It is the resource network for the DRK-12 program. To explore the resources of CADRE see http://cadrek12.org/
- The Center for Innovative Research in CyberLearning (CIRCL) supports the cyberlearning research community across all relevant programs at NSF. Its vision is to support, synergize, and amplify the efforts of cyber-themed projects. See http://circlcenter.org for more information.

The resources on the CADRE and CIRCL websites may be more pertinent to proposal preparation for DRK-12. However, these additional centers may also be useful:

- The Center for Advancement of Informal Science Education (CAISE) works in collaboration with the NSF AISL program to strengthen and advance the field of informal STEM education and its infrastructure by providing resources for NSF principal investigators, ISE professionals, and STEM researchers. See http://informalscience.org/nsf-aisl for more information.
- The STEM Learning and Research Center (STELAR) is supported by the ITEST program. STELAR's mission is to build capacity and magnify the results of ITEST projects in order to deepen the impact of the ITEST program. For more information see http://stelar.edc.org/

DRK-12 is one of six programs in the Division of Research on Learning in Formal and Informal Settings (DRL) in the Directorate for Education and Human Resources (EHR). The other five programs in EHR/DRL are: · Advanced Technological Education (ATE) · Advancing Informal STEM Learning (AISL) · Innovative Technology Experiences for Students and Teachers (ITEST) · EHR Core Research (ECR) · STEM + Computing Partnerships (STEM+C). Each program can be accessed from the DRL Web Page http://www.nsf.gov/div/index.jsp?div=DRL.

Investments by EHR/DRL contribute to the three categories that together form the foundation for EHR's strategic framework toward the fulfillment of the EHR mission. Within each of these categories, EHR/DRL will continue to build and emphasize its research and development activities.

- Learning and learning environments: Investments in this category seek to develop understanding of the cognitive, affective, and non-cognitive foundations of STEM learning; to study emerging contexts and tools for learning STEM concepts and skills; and to build environments that promote new, high-impact learning opportunities for tomorrow’s scientists and engineers, as well as the public (publics) and students living in an increasingly technology-oriented society.
- Broadening participation in STEM: Programs in this category capitalize on the Nation’s diversity in order to increase the scientific workforce by engaging and building capacity in all people in STEM learning and professional training, particularly those from groups that have been traditionally underrepresented in STEM fields.<n
- STEM workforce: Workforce investments are intended to improve the education and preparation of a STEM workforce that will be ready to capitalize on unprecedented advances in technology and science, and to address future global, social, and economic challenges.

This framework positions the directorate to respond more readily to emerging opportunities created by new technologies, improvements in the STEM education evidence base, administration priorities, and other national or societal needs. For more information on EHR see: http://www.nsf.gov/dir/index.jsp?org=EHR

The programs listed below may also be of interest; see individual solicitations for due dates:

- Faculty Early Career Development (CAREER) http://www.nsf.gov/funding/pgm_summ.jsp?pims_id=503214
- Improving Undergraduate STEM Education (IUSE) http://www.nsf.gov/funding/pgm_summ.jsp?pims_id=505082&org=DUE&from=home
- Robert Noyce Teacher Scholarship Program (Noyce) http://www.nsf.gov/funding/pgm_summ.jsp?pims_id=5733&org=DUE&from=home

III. AWARD INFORMATION

Anticipated Type of Award: Continuing Grant or Standard Grant

Estimated Number of Awards: 35 to 45

per year. It is anticipated that about 10-15 Level I awards, 15-20 Level II awards 5-10 Level III awards, and 5 Conference/Synthesis awards will be made in FY 2016, pending availability of funds.

Anticipated Funding Amount:

Pending availability of funds, NSF anticipates having approximately $100,000,000 available over the two fiscal year period FY2016-2017 for support of the DRK-12 portfolio. Approximately $50,000,000 will be available for the FY2016 competition and approximately $50,000,000 will be available for the FY2017 competition.

Normal limits for funding requests of DRK-12 proposals are as follows: (1) Level I projects up to $450,000 with duration up to three years; (2) Level II projects up to $3,000,000 with duration up to four years; and (3) Level III projects up to $5,000,000 with duration up to five years. The three levels of funding should align with the maturity of the proposed work, the size and scope of the empirical
effort, as well as the capacity of the interdisciplinary team to conduct the proposed research.

IV. ELIGIBILITY INFORMATION

Who May Submit Proposals:

The categories of proposers eligible to submit proposals to the National Science Foundation are identified in the Grant Proposal Guide, Chapter I, Section E.

Who May Serve as PI:

There are no restrictions or limits.

Limit on Number of Proposals per Organization:

There are no restrictions or limits.

Limit on Number of Proposals per PI or Co-PI:

There are no restrictions or limits.

V. PROPOSAL PREPARATION AND SUBMISSION INSTRUCTIONS

A. Proposal Preparation Instructions

Full Proposal Preparation Instructions: Proposers may opt to submit proposals in response to this Program Solicitation via Grants.gov or via the NSF FastLane system.

- Full proposals submitted via FastLane: Proposals submitted in response to this program solicitation should be prepared and submitted in accordance with the general guidelines contained in the NSF Grant Proposal Guide (GPG). The complete text of the GPG is available electronically on the NSF website at: http://www.nsf.gov/publications/pub_summ.jsp?ods_key=gpg. Paper copies of the GPG may be obtained from the NSF Publications Clearinghouse, telephone (703) 292-7827 or by e-mail from nsfpubs@nsf.gov. Proposers are reminded to identify this program solicitation number in the program solicitation block on the NSF Cover Sheet For Proposal to the National Science Foundation. Compliance with this requirement is critical to determining the relevant proposal processing guidelines. Failure to submit this information may delay processing.

- Full proposals submitted via Grants.gov: Proposals submitted in response to this program solicitation via Grants.gov should be prepared and submitted in accordance with the NSF Grants.gov Application Guide: A Guide for the Preparation and Submission of NSF Applications via Grants.gov. The complete text of the NSF Grants.gov Application Guide is available on the Grants.gov website and on the NSF website at: (http://www.nsf.gov/publications/pub_summ.jsp?ods_key=granteegovguide). To obtain copies of the Application Guide and Application Forms Package, click on the Apply tab on the Grants.gov site, then click on the Apply Step 1: Download a Grant Application Package and Application Instructions link and enter the funding opportunity number, (the program solicitation number without the NSF prefix) and press the Download Package button. Paper copies of the Grants.gov Application Guide also may be obtained from the NSF Publications Clearinghouse, telephone (703) 292-7827 or by e-mail from nsfpubs@nsf.gov.

In determining which method to utilize in the electronic preparation and submission of the proposal, please note the following:

Collaborative Proposals. All collaborative proposals submitted as separate submissions from multiple organizations must be submitted via the NSF FastLane system. Chapter II, Section D.5 of the Grant Proposal Guide provides additional information on collaborative proposals.

See Chapter II.C.2 of the GPG for guidance on the required sections of a full research proposal submitted to NSF. Please note that the proposal preparation instructions provided in this program solicitation may deviate from the GPG instructions.

Information Applicable to all Proposals

Cover Sheet. Complete this form with the appropriate information. All proposals submitted to DRK-12 are assumed to have the potential for conducting research on human subjects. Therefore, proposers must select the human subjects box on the cover sheet and should have prior or pending approval of their research from the appropriate institutional review board (IRB).

Project Summary. The first sentence of the Project Summary should specify the type of proposal (e.g., Exploratory; Design and Development; Impact Studies; Implementation or Improvement Studies; or Workshop/Synthesis) and the Strand addressed. The second sentence should state the discipline or disciplines being addressed and grade level(s), if appropriate.

Proposals that do not contain the Project Summary, including an overview and separate statements on intellectual merit and broader impacts will not be accepted or will be returned without review as outlined in the GPG II.C.2.b.

Project Description. The Project Description is limited to 15 pages and must comply with all formatting requirements of the most current Grant Proposal Guide II.C.2.d. Proposals funded under this solicitation must focus on a research question or hypothesis about PreK-12 STEM assessment, learning or teaching.

Proposals must address the following elements in the 15-page project description, in any order:

1. Importance:

   The proposal must clearly show how the proposed project addresses critical STEM educational needs, and has the
potential for broad impact. The proposal should provide a rationale for how the project will improve STEM education for students and advance knowledge, and it should explain how products or findings might ultimately be implemented in schools, even if in the long term. The proposal should address how the proposed STEM education innovations or approaches differ from existing practice and why the proposed project has the potential to improve learning or education outcomes beyond what current practice provides.

2. Results from prior NSF support

The proposal must describe results of prior NSF support for related educational projects in which the PI or co-PI have been involved, as outlined in the GPG.

3. Research and Development Design

The design of any DRK-12 proposal begins with hypotheses or research questions about how some aspect of STEM education can be improved based on theories of learning and development and prior empirical work. The proposal should articulate a plan of work that describes research and development strategies appropriate for attaining its goals consistent with the type of study proposed. Proposals must demonstrate how the work is related to similar research and development. The proposal should address how the major design iterations and resulting evidence will be developed to support or question key assumptions underlying the research and development plan. The proposal should identify all measures to be developed or employed in generating evidence of the project’s success and provide evidence of or plans to establish the technical quality (e.g., validity and reliability) of each measure. The proposal should include detailed descriptions of the study goals, design and implementation processes, data collection and quality, and analysis and methods for producing findings.

4. Mechanisms to Assess Success of the Project

All DRL projects are subject to a series of external, critical reviews of their designs and activities (including their theoretical frameworks, any data collection plans, analysis plans, and reporting plans). Peer review of the proposed project and ongoing post-award monitoring by NSF staff are two types of external critical review that apply to all DRL projects. A proposal must describe appropriate mechanisms to assess success through project-specific external review and feedback processes. These might include an external review panel or advisory board proposed by the project or a third-party evaluator. The external critical review should be sufficiently independent and rigorous to influence the project’s activities and improve the quality of its findings. Successful proposals will (1) describe the expertise of the external reviewer(s); (2) explain how the expertise relates to the goals and objectives of the proposal; and (3) specify how the PI will report and use results of the project’s external, critical review process.

5. Dissemination

A proposal must include a creative communication strategy for reaching a broad audience for the findings of the project, including, where appropriate, scholars, practitioners, policymakers and public audiences. While the potential results of the proposed research are expected to be of sufficient significance to merit peer-reviewed and broader publication, approaches that reach broader audiences are strongly encouraged. Proposals should identify the key elements of a communication plan, e.g., target audiences and identification of the channels/media/technologies appropriate for reaching specific audiences.

6. Expertise

DRK-12 proposals generally involve interdisciplinary teams. Projects typically include STEM education researchers, development experts, school district personnel, experienced teachers, STEM researchers, statisticians, psychometricians, learning scientists and informal learning experts, and policy researchers, as appropriate. When feasible, proposals should include new researchers and developers (e.g., beginning scholars, postdoctoral associates, and graduate students) as part of the project team as a means of building a more diverse community of researchers, designers, and developers. The proposal should include a brief narrative describing the expertise of personnel and their contributions to the proposed work, including those responsible for the external review.

7. Broader Impacts

Please note that per guidance in the GPG, the Project Description must contain, as a separate section within the narrative, a section labeled “Broader Impacts”. This section should provide a discussion of the broader impacts of the proposed activities. Proposers can decide where to include this section within the Project Description.

Special Information/Supplementary Documentation:

In addition to the Special Information and Supplementary Documents outlined in the Grant Proposal Guide, please provide one-page list of senior staff, affiliations and partner institutions. Inclusion of any other information in the supplementary documents or as an appendix will result in the proposal being returned without review.

B. Budgetary Information

Cost Sharing:

Inclusion of voluntary committed cost sharing is prohibited.

Budget Preparation Instructions:

DRK-12 generally does not fund equipment that is normally found in schools, universities, and research and development organizations, such as computers. Requests for equipment must be accompanied by justification for its importance to the operation of the project.

The budget should include a request for funds to cover the cost of attendance of the Principal Investigator at an annual awardees meeting in the Washington, DC area.

DRK-12 does not provide scholarships for undergraduate, pre-service, or other students.

D. FastLane/Grants.gov Requirements

C. Due Dates

- **Full Proposal Deadline(s)** (due by 5 p.m. submitter's local time):
  - December 07, 2015
  - December 05, 2016
  - First Monday in December, Annually Thereafter

For Proposals Submitted Via FastLane:

To prepare and submit a proposal via FastLane, see detailed technical instructions available at:

https://www.fastlane.nsf.gov/a1/newstan.htm. For FastLane user support, call the FastLane Help Desk at 1-800-673-6188 or e-mail fastlane@nsf.gov. The FastLane Help Desk answers general technical questions related to the use of the FastLane system. Specific questions related to this program solicitation should be referred to the NSF program staff contact(s) listed in Section VIII of this funding opportunity.

For Proposals Submitted Via Grants.gov:

Before using Grants.gov for the first time, each organization must register to create an institutional profile. Once registered, the applicant's organization can then apply for any federal grant on the Grants.gov website. Comprehensive information about using Grants.gov is available on the Grants.gov Applicant Resources webpage:

http://www.grants.gov/web/grants/applicants.html. In addition, the NSF Grants.gov Application Guide (see link in Section V.A) provides instructions regarding the technical preparation of proposals via Grants.gov. For Grants.gov user support, contact the Grants.gov Contact Center at 1-800-518-4726 or by email: support@grants.gov. The Grants.gov Contact Center answers general technical questions related to the use of Grants.gov. Specific questions related to this program solicitation should be referred to the NSF program staff contact(s) listed in Section VIII of this solicitation.

Submitting the Proposal: Once all documents have been completed, the Authorized Organizational Representative (AOR) must submit the application to Grants.gov and verify the desired funding opportunity and agency to which the application is submitted. The AOR must then sign and submit the application to Grants.gov. The completed application will be transferred to the NSF FastLane system for further processing.

Proposers that submitted via FastLane are strongly encouraged to use FastLane to verify the status of their submission to NSF. For proposers that submitted via Grants.gov, until an application has been received and validated by NSF, the Authorized Organizational Representative may check the status of an application on Grants.gov. After proposers have received an e-mail notification from NSF, Research.gov should be used to check the status of an application.

VI. NSF PROPOSAL PROCESSING AND REVIEW PROCEDURES

Proposals received by NSF are assigned to the appropriate NSF program for acknowledgement and, if they meet NSF requirements, for review. All proposals are carefully reviewed by a scientist, engineer, or educator serving as an NSF Program Officer, and usually by three to ten other persons outside NSF either as ad hoc reviewers, panelists, or both, who are experts in the particular fields represented by the proposal. These reviewers are selected by Program Officers charged with oversight of the review process. Program Officers are invited to suggest names of persons they believe are especially well qualified to review the proposal and/or persons they would prefer not review the proposal. These suggestions may serve as one source in the reviewer selection process at the Program Officer's discretion. Submission of such names, however, is optional. Care is taken to ensure that reviewers have no conflicts of interest with the proposal. In addition, Program Officers may obtain comments from site visits before recommending final action on proposals. Senior NSF staff further review recommendations for awards. A flowchart that depicts the entire NSF proposal and award process (and associated timeline) is included in the GPG as Exhibit III-1.

A comprehensive description of the Foundation's merit review process is available on the NSF website at:

Proposers should also be aware of core strategies that are essential to the fulfillment of NSF's mission, as articulated in Investing in Science, Engineering, and Education for the Nation's Future: NSF Strategic Plan for 2014-2018. These strategies are integrated in the program planning and implementation process, of which proposal review is one part. NSF's mission is particularly well-implemented through the integration of research and education and broadening participation in NSF programs, projects, and activities.

One of the strategic objectives in support of NSF's mission is to foster integration of research and education through the programs, projects, and activities it supports at academic and research institutions. These institutions must recruit, train, and prepare a diverse STEM workforce to advance the frontiers of science and participate in the U.S. technology-based economy. NSF's contribution to the national innovation ecosystem is to provide cutting-edge research under the guidance of the Nation's most creative scientists and engineers. NSF also supports development of a strong science, technology, engineering, and mathematics (STEM) workforce by investing in building the knowledge that informs improvements in STEM teaching and learning.

NSF's mission calls for the broadening of opportunities and expanding participation of groups, institutions, and geographic regions that are underrepresented in STEM disciplines, which is essential to the health and vitality of science and engineering. NSF is committed to this principle of diversity and deems it central to the programs, projects, and activities it considers and supports.

A. Merit Review Principles and Criteria
The National Science Foundation strives to invest in a robust and diverse portfolio of projects that creates new knowledge and enables breakthroughs in understanding across all areas of science and engineering research and education. To identify which projects to support, NSF relies on a merit review process that incorporates consideration of both the technical aspects of a proposed project and its potential to contribute more broadly to advancing NSF’s mission “to promote the progress of science; to advance the national health, prosperity, and welfare; to secure the national defense; and for other purposes.” NSF makes every effort to conduct a fair, competitive, transparent merit review process for the selection of projects.

1. Merit Review Principles

These principles are to be given due diligence by PIs and organizations when preparing proposals and managing projects, by reviewers when reading and evaluating proposals, and by NSF program staff when determining whether or not to recommend proposals for funding and while overseeing awards. Given that NSF is the primary federal agency charged with nurturing and supporting excellence in basic research and education, the following three principles apply:

- All NSF projects should be of the highest quality and have the potential to advance, if not transform, the frontiers of knowledge.
- NSF projects, in the aggregate, should contribute more broadly to achieving societal goals. These “Broader Impacts” may be accomplished through the research itself, through activities that are directly related to specific research projects, or through activities that are supported by, but are complementary to, the project. The project activities may be established and/or innovative methods and approaches, but in either case must be well justified.
- With respect to the third principle, even if assessment of Broader Impacts outcomes for particular projects is done at an aggregated level, PIs are expected to be accountable for carrying out the activities described in the funded project. Thus, individual projects should include clearly stated goals, specific descriptions of the activities that the PI intends to do, and a plan in place to document the outputs of those activities.

These three merit review principles provide the basis for the merit review criteria, as well as a context within which the users of the criteria can better understand their intent.

2. Merit Review Criteria

All NSF proposals are evaluated through use of the two National Science Board approved merit review criteria. In some instances, however, NSF will employ additional criteria as required to highlight the specific objectives of certain programs and activities.

The two merit review criteria are listed below. Both criteria are to be given full consideration during the review and decision-making processes; each criterion is necessary but neither, by itself, is sufficient. Therefore, proposers must fully address both criteria. (GPG Chapter II.C.2.d.i. contains additional information for use by proposers in development of the Project Description section of the proposal.) Reviewers are strongly encouraged to review the criteria, including GPG Chapter II.C.2.d.i., prior to the review of a proposal.

When evaluating NSF proposals, reviewers will be asked to consider what the proposers want to do, why they want to do it, how they plan to do it, how they will know if they succeed, and what benefits could accrue if the project is successful. These issues apply both to the technical aspects of the proposal and the way in which the project may make broader contributions. To that end, reviewers will be asked to evaluate all proposals against two criteria:

- Intellectual Merit: The Intellectual Merit criterion encompasses the potential to advance knowledge; and
- Broader Impacts: The Broader Impacts criterion encompasses the potential to benefit society and contribute to the achievement of specific, desired societal outcomes.

The following elements should be considered in the review for both criteria:

1. What is the potential for the proposed activity to
   a. Advance knowledge and understanding within its own field or across different fields (Intellectual Merit); and
   b. Benefit society or advance desired societal outcomes (Broader Impacts)?
2. To what extent do the proposed activities suggest and explore creative, original, or potentially transformative concepts?
3. Is the plan for carrying out the proposed activities well-reasoned, well-organized, and based on a sound rationale? Does the plan incorporate a mechanism to assess success?
4. How well qualified is the individual, team, or organization to conduct the proposed activities?
5. Are there adequate resources available to the PI (either at the home organization or through collaborations) to carry out the proposed activities?

Broader impacts may be accomplished through the research itself, through the activities that are directly related to specific research projects, or through activities that are supported by, but are complementary to, the project. NSF values the advancement of scientific knowledge and activities that contribute to achievement of societally relevant outcomes. Such outcomes include, but are not limited to: full participation of women, persons with disabilities, and underrepresented minorities in science, technology, engineering, and mathematics (STEM); improved STEM education and educator development at any level; increased public scientific literacy and public engagement with science and technology; improved well-being of individuals in society; development and/or innovative methods and approaches; and for other purposes. These outcomes apply both to the technical aspects of the proposal and the way in which the project may make broader contributions. To that end, reviewers will be asked to evaluate all proposals against two criteria:

1. Intellectual Merit: The Intellectual Merit criterion encompasses the potential to advance knowledge; and
2. Broader Impacts: The Broader Impacts criterion encompasses the potential to benefit society and contribute to the achievement of specific, desired societal outcomes.

3. How well qualified is the individual, team, or organization to conduct the proposed activities?
4. Are there adequate resources available to the PI (either at the home organization or through collaborations) to carry out the proposed activities?

The review process is designed to ensure that the recommendations of reviewers are objective, unbiased, and well-informed. Proposers are reminded that reviewers will also be asked to review the Data Management Plan and the Postdoctoral Researcher Mentoring Plan, as appropriate.

B. Review and Selection Process

Proposals submitted in response to this program solicitation will be reviewed by Ad hoc Review and/or Panel Review.

Reviewers will be asked to evaluate proposals using two National Science Board approved merit review criteria and, if applicable, additional program specific criteria. A summary rating and accompanying narrative will generally be completed and submitted by each reviewer and/or panel. The Program Officer assigned to manage the proposal’s review will consider the advice of reviewers and will formulate a recommendation.
After scientific, technical and programmatic review and consideration of appropriate factors, the NSF Program Officer recommends to the cognizant Division Director whether the proposal should be declined or recommended for award. NSF strives to be able to tell applicants whether their proposals have been declined or recommended for funding within six months. Large or particularly complex proposals or proposals from new awardees may require additional review and processing time. The time interval begins on the deadline or target date, or receipt date, whichever is later. The interval ends when the Division Director acts upon the Program Officer’s recommendation.

After programmatic approval has been obtained, the proposals recommended for funding will be forwarded to the Division of Grants and Agreements for review of business, financial, and policy implications. After an administrative review has occurred, Grants and Agreements Officers perform the processing and issuance of a grant or other agreement. Proposers are cautioned that only a Grants and Agreements Officer may make commitments, obligations or awards on behalf of NSF or authorize the expenditure of funds. No commitment on the part of NSF should be inferred from technical or budgetary discussions with a NSF Program Officer. A Principal Investigator or organization that makes financial or personnel commitments in the absence of a grant or cooperative agreement signed by the NSF Grants and Agreements Officer does so at their own risk.

Once an award or declination decision has been made, Principal Investigators are provided feedback about their proposals. In all cases, reviews are treated as confidential documents. Verbatim copies of reviews, excluding the names of the reviewers or any reviewer-identifying information, are sent to the Principal Investigator/Project Director by the Program Officer. In addition, the proposer will receive an explanation of the decision to award or decline funding.

### VII. AWARD ADMINISTRATION INFORMATION

#### A. Notification of the Award

Notification of the award is made to the submitting organization by a Grants Officer in the Division of Grants and Agreements. Organizations whose proposals are declined will be advised as promptly as possible by the cognizant NSF Program administering the program. Verbatim copies of reviews, not including the identity of the reviewer, will be provided automatically to the Principal Investigator. (See Section VI.B. for additional information on the review process.)

#### B. Award Conditions

An NSF award consists of: (1) the award notice, which includes any special provisions applicable to the award and any numbered amendments thereto; (2) the budget, which indicates the amounts, by categories of expense, on which NSF has based its support (or otherwise communicates any specific approvals or disapprovals of proposed expenditures); (3) the proposal referenced in the award notice; (4) the applicable award conditions, such as Grant General Conditions (GC-1)*; or Research Terms and Conditions* and (5) any announcement or other NSF issuance that may be incorporated by reference in the award notice. Cooperative agreements also are administered in accordance with NSF Cooperative Agreement Financial and Administrative Terms and Conditions (CA-FATC) and the applicable Programmatic Terms and Conditions. NSF awards are electronically signed by an NSF Grants and Agreements Officer and transmitted electronically to the organization via e-mail.

*These documents may be accessed electronically on NSF’s Website at [http://www.nsf.gov/awards/managing/award_conditions.jsp?org=NSF](http://www.nsf.gov/awards/managing/award_conditions.jsp?org=NSF). Paper copies may be obtained from the NSF Publications Clearinghouse, telephone (703) 292-7827 or by e-mail from nsfpubs@nsf.gov.

#### C. Reporting Requirements

For all multi-year grants (including both standard and continuing grants), the Principal Investigator must submit an annual project report to the cognizant Program Officer no later than 90 days prior to the end of the current budget period. (Some programs or awards require submission of more frequent project reports). No later than 120 days following expiration of a grant, the PI also is required to submit a final project report, and a project outcomes report for the general public.

Failure to provide the required annual or final project reports, or the project outcomes report, will delay NSF review and processing of any future funding increments as well as any pending proposals for all identified PIs and co-PIs on a given award. PIs should examine the formats of the required reports in advance to assure availability of required data.

PIs are required to use NSF’s electronic project-reporting system, available through Research.gov, for preparation and submission of annual and final project reports. Such reports provide information on accomplishments, project participants (individual and organizational), publications, and other specific products and impacts of the project. Submission of the report via Research.gov constitutes certification by the PI that the contents of the report are accurate and complete. The project outcomes report also must be prepared and submitted using Research.gov. This report serves as a brief summary, prepared specifically for the public, of the nature and outcomes of the project. This report will be posted on the NSF website exactly as it is submitted by the PI.

### VIII. AGENCY CONTACTS
**IX. OTHER INFORMATION**

The NSF website provides the most comprehensive source of information on NSF Directorates (including contact information), programs and funding opportunities. Use of this website by potential proposers is strongly encouraged. In addition, “NSF Update” is an information-delivery system designed to keep potential proposers and other interested parties apprised of new NSF funding opportunities and publications, important changes in proposal and award policies and procedures, and upcoming NSF Grants Conferences. Subscribers are informed through e-mail or the user’s Web browser each time new publications are issued that match their identified interests. “NSF Update” also is available on NSF’s website.

Grants.gov provides an additional electronic capability to search for Federal government-wide grant opportunities. NSF funding opportunities may be accessed via this mechanism. Further information on Grants.gov may be obtained at [http://www.grants.gov](http://www.grants.gov).

This solicitation has been revised to incorporate into the Other Information section a newly issued publication jointly developed by National Science Foundation and the Institute of Education Sciences in the U.S. Department of Education entitled, **Common Guidelines for Education Research and Development**. The **Guidelines** describe six types of research studies that can generate evidence about how to increase student learning. Research types include those that generate the most fundamental understandings related to education and learning; examinations of associations between variables; iterative design and testing of strategies or interventions; and assessments of the impact of a fully-developed intervention on an education outcome. For each research type, there is a description of the purpose and the expected empirical and/or theoretical justifications, types of project outcomes, and quality of evidence.

The **Guidelines** publication can be found on the NSF website with the number NSF 13-126 (http://www.nsf.gov/pubs/2013/nsf13126/nsf13126.pdf). A set of FAQs regarding the **Guidelines** are available with the number NSF 13-127(http://www.nsf.gov/pubs/2013/nsf13127/nsf13127.pdf). Grant proposal writers and PIs are encouraged to familiarize themselves with both documents and use the information therein to help in the preparation of proposals to NSF.

**ABOUT THE NATIONAL SCIENCE FOUNDATION**

The National Science Foundation (NSF) is an independent Federal agency created by the National Science Foundation Act of 1950, as amended (42 USC 1861-75). The Act states the purpose of the NSF is “to promote the progress of science; [and] to advance the national health, prosperity, and welfare by supporting research and education in all fields of science and engineering.” NSF funds research and education in most fields of science and engineering. It does this through grants and cooperative agreements to more than 2,000 colleges, universities, K-12 school systems, businesses, informal science organizations and other research organizations throughout the US. The Foundation accounts for about one-fourth of Federal support to academic institutions for basic research.
NSF receives approximately 55,000 proposals each year for research, education and training projects, of which approximately 11,000 are funded. In addition, the Foundation receives several thousand applications for graduate and postdoctoral fellowships. The agency operates no laboratories itself but does support National Research Centers, user facilities, certain oceanographic vessels and Arctic and Antarctic research stations. The Foundation also supports cooperative research between universities and industry, US participation in international scientific and engineering efforts, and educational activities at every academic level.

Facilitation Awards for Scientists and Engineers with Disabilities provide funding for special assistance or equipment to enable persons with disabilities to work on NSF-supported projects. See Grant Proposal Guide Chapter II, Section D.2 for instructions regarding preparation of these types of proposals.

The National Science Foundation has Telephonic Device for the Deaf (TDD) and Federal Information Relay Service (FIRS) capabilities that enable individuals with hearing impairments to communicate with the Foundation about NSF programs, employment or general information. TDD may be accessed at (703) 292-5090 and (800) 281-8749, FIRS at (800) 877-8339.

The National Science Foundation Information Center may be reached at (703) 292-5111.

The National Science Foundation promotes and advances scientific progress in the United States by competitively awarding grants and cooperative agreements for research and education in the sciences, mathematics, and engineering.

To get the latest information about program deadlines, to download copies of NSF publications, and to access abstracts of awards, visit the NSF Website at http://www.nsf.gov

### PRIVACY ACT AND PUBLIC BURDEN STATEMENTS

The information requested on proposal forms and project reports is solicited under the authority of the National Science Foundation Act of 1950, as amended. The information on proposal forms will be used in connection with the selection of qualified proposals; and project reports submitted by awardees will be used for program evaluation and reporting within the Executive Branch and to Congress. The information requested may be disclosed to qualified reviewers and staff assistants as part of the proposal review process; to proposer institutions/grantees to provide or obtain data regarding the proposal review process, award decisions, or the administration of awards; to government contractors, experts, volunteers and researchers and educators as necessary to complete assigned work; to other government agencies or other entities needing information regarding applicants or nominees as part of a joint application review process, or in order to coordinate programs or policy; and to another Federal agency, court, or party in a court or Federal administrative proceeding if the government is a party. Information about Principal Investigators may be added to the Reviewer file and used to select potential candidates to serve as peer reviewers or advisory committee members. See Systems of Records, NSF-50, "Principal Investigator/Proposal File and Associated Records," 69 Federal Register 26410 (May 12, 2004), and NSF-51, "Reviewer/Proposal File and Associated Records," 69 Federal Register 26410 (May 12, 2004). Submission of the information is voluntary. Failure to provide full and complete information, however, may reduce the possibility of receiving an award.

An agency may not conduct or sponsor, and a person is not required to respond to, an information collection unless it displays a valid Office of Management and Budget (OMB) control number. The OMB control number for this collection is 3145-0058. Public reporting burden for this collection of information is estimated to average 120 hours per response, including the time for reviewing instructions. Send comments regarding the burden estimate and any other aspect of this collection of information, including suggestions for reducing this burden, to:

Suzanne H. Plimpton
Reports Clearance Officer
Office of the General Counsel
National Science Foundation
