Computer and Network Systems (CNS): Core Programs

PROGRAM SOLICITATION
NSF 17-570

REPLACES DOCUMENT(S):
NSF 16-579

Submission Window Date(s) (due by 5 p.m. submitter's local time):

September 20, 2017 - September 27, 2017
   MEDIUM Projects

September 20, 2017 - September 27, 2017
   LARGE Projects

November 01, 2017 - November 15, 2017
   SMALL Projects

IMPORTANT INFORMATION AND REVISION NOTES

This is a revision of NSF 16-579, the solicitation for the CISE/CNS Core Programs. The revisions include:

- A checklist summarizing the requirements for submission.
- The Computer Systems Research (CSR) program is not accepting Large proposals through this solicitation. The Networking Technology and Systems (NeTS) program will accept Large proposals.
- Clarifications to the CSR program regarding validation plans and system perspectives.
- The NeTS Highlighted Areas are largely replaced with new areas.
- Additional information is included for Broadening Participation.
- Clarification of restrictions regarding foreign campuses/offices of US universities.
- Removal of "breakthrough" proposals as a separate class.
- Removal of the information about related programs, such as Algorithms in the Field, Collaborative Research in Computational Neuroscience, etc.
- Clarification of the "annually thereafter" from the submission windows. This does not reflect a change in policy, but rather a simplification to avoid confusion.

Collaborators and Other Affiliations are collected using a template spreadsheet for each senior project personnel on a proposal, which Fastlane will combine into a PDF document. Project leads need not collect and combine collaborator lists.

The following recent revisions to the Proposal & Award Policies & Procedures Guide (PAPPG) will be closely observed for all submissions to this solicitation:

- PAPPG Chapter II.C.2.d.i requires that, "The Project Description must contain, as a separate section within the narrative, a section labeled 'Broader Impacts'."
- PAPPG Chapter II.C.2.f clarifies the requirements for Biographical Sketch(es).
- PAPPG Chapter II.C.2.h revises requirements for reporting Current and Pending Support.
- PAPPG Chapter II.C.2.i Special Information and Supplementary Documentation, specifies the proper scope for letters of collaboration.

Any proposal submitted in response to this solicitation should be submitted in accordance with the revised NSF Proposal & Award Policies & Procedures Guide (PAPPG) (NSF 17-1), which is effective for proposals submitted, or due, on or after January 30, 2017.

SUMMARY OF PROGRAM REQUIREMENTS

General Information
Program Title:
Computer and Network Systems (CNS): Core Programs

Synopsis of Program:
CISE’s Division of Computer and Network Systems (CNS) supports research and education projects that develop new knowledge in two core programs:

- Computer Systems Research (CSR) program; and
- Networking Technology and Systems (NeTS) program.

Proposers are invited to submit proposals in three project classes, which are defined as follows:

- Small Projects - up to $500,000 total budget with durations up to three years;
- Medium Projects - $500,001 to $1,200,000 total budget with durations up to four years; and
- Large Projects - $1,200,001 to $3,000,000 total budget with durations up to five years.

CSR proposals must be in the Small or Medium classes only; NeTS proposals may be in the Small, Medium, or Large class.

A more complete description of the three project classes can be found in Section II. Program Description of this document.

Cognizant Program Officer(s):
Please note that the following information is current at the time of publishing. See program website for any updates to the points of contact.

- Jack Brassil, NeTS Program Director, 1175, telephone: (703) 292-8950, email: jbrassil@nsf.gov
- Darleen L. Fisher, NeTS Program Director, 1175, telephone: (703) 292-8950, email: dfisher@nsf.gov
- Samee U. Khan, CSR Program Director, 1175, telephone: (703) 292-8950, email: skhan@nsf.gov
- Sandip Kundu, CSR Program Director, 1175, telephone: (703) 292-8950, email: skundu@nsf.gov
- Mimi McClure, CSR Associate Program Director, 1175, telephone: (703) 292-8950, email: mmcclure@nsf.gov
- Thyaga Nandagopal, NeTS Program Director, 1175, telephone: (703) 292-8950, email: tnandago@nsf.gov
- Yan Solihin, CSR Program Director, 1175, telephone: (703) 292-8950, email: ysolihin@nsf.gov
- Ann C. Von Lehmen, NeTS Program Director, 1175, telephone: (703) 292-8950, email: avonlehm@nsf.gov

Applicable Catalog of Federal Domestic Assistance (CFDA) Number(s):
- 47.070 — Computer and Information Science and Engineering

Award Information

Anticipated Type of Award: Standard Grant or Continuing Grant

Estimated Number of Awards: 100 to 150

awards will be made each year.

Anticipated Funding Amount: $60,000,000

per year, dependent upon the availability of funds.

Eligibility Information

Who May Submit Proposals:

- Universities and Colleges - Universities and two- and four-year colleges (including community colleges) accredited in, and having a campus located in, the US acting on behalf of their faculty members. Such organizations also are referred to as academic institutions.
- Non-profit, non-academic organizations: Independent museums, observatories, research labs, professional societies and similar organizations in the U.S. associated with educational or research activities.

Who May Serve as PI:
PIs, co-PIs or other senior project personnel must hold primary, full-time, paid appointments in research or teaching positions at US-based campuses/offices of eligible organizations.

Limit on Number of Proposals per Organization:

There are no restrictions or limits.

Limit on Number of Proposals per PI or Co-PI: 2

In any contiguous September through November period, an individual may participate as PI, Co-PI or Senior Personnel in no more than two Small, Medium, or Large proposals submitted in response to the coordinated solicitation (where coordinated solicitation is defined to include the Computer and Network Systems (CNS): Core Programs, Computing and Communication Foundations (CCF): Core Programs, and the Information and Intelligent Systems (IIS): Core Programs solicitations). For example, between September 2017 and November 2017, an individual may participate as PI, co-PI or Senior Personnel in one proposal submitted to a core program in CNS and in a second proposal submitted to a core program in CCF, or an individual may participate as PI, co-PI or Senior Personnel in two proposals submitted to an IIS core program, etc.

These eligibility constraints will be strictly enforced in order to treat everyone fairly and consistently. In the event that an individual exceeds this limit, proposals received within the limit will be accepted based on earliest date and time of proposal submission (i.e., the first two proposals received will be accepted and the remainder will be returned without review). No exceptions will be made.

The limit on the number of proposals per PI, co-PI or Senior Personnel applies only to the coordinated solicitation.

Proposal Preparation and Submission Instructions

A. Proposal Preparation Instructions

- Letters of Intent: Not required
- Preliminary Proposal Submission: Not required
- Full Proposals:

B. Budgetary Information

- Cost Sharing Requirements:
  Inclusion of voluntary committed cost sharing is prohibited.
- Indirect Cost (F&A) Limitations:
  Not Applicable
- Other Budgetary Limitations:
  Other budgetary limitations apply. Please see the full text of this solicitation for further information.

C. Due Dates

- Submission Window Date(s) (due by 5 p.m. submitter's local time):
  September 20, 2017 - September 27, 2017
  MEDIUM Projects
  September 20, 2017 - September 27, 2017
  LARGE Projects
  November 01, 2017 - November 15, 2017
  SMALL Projects

Proposal Review Information Criteria

Merit Review Criteria:
I. INTRODUCTION

The Division of Computer and Network Systems (CNS) supports research and education activities that invent new computing and networking technologies and that explore new ways to make use of existing technologies. The Division seeks to develop a better understanding of the fundamental properties of computer and network systems and to create better abstractions and tools for designing, building, analyzing, and measuring future systems.

II. PROGRAM DESCRIPTION

CNS supports two core programs as described below. In addition, CNS invites proposals that bridge the research areas of CSR and NeTS.

Computer Systems Research (CSR)

Computer systems support a broad range of applications and technologies that seamlessly integrate with human users. While many key building blocks of computer systems are today commercial technologies, the challenge ahead is to envision new technologies, as well as to combine existing technologies, software, and sensing systems into the computer systems of the future that will span wearable computing, the Internet of Things (IoT), “Smart Cities,” intelligent transportation systems, personalized healthcare, and beyond. Such
computer systems will require new, innovative, and visionary approaches to hardware, wired and wireless communications, consideration of human-computer interactions, and new programming languages and compilers that are limited only by the imagination. They will need to be reliable in the presence of unreliable components, adaptive to changing environments, capable of supporting high-throughput applications and large-scale data storage and processing, and able to meet performance and energy objectives for applications ranging from very low-power embedded systems to large high-performance computing systems. Furthermore, computer systems of the future will need to provide mechanisms for ensuring security and privacy.

The Computer Systems Research (CSR) program supports transformative scientific and engineering research leading to the development of the next generation of highly performant, heterogeneous, power-efficient, environmentally sustainable, and secure computer systems. The scope includes embedded and multi-core systems and accelerators, mobile and extendable distributed systems; cloud and data-intensive processing systems; and memory, storage, and file systems. The program seeks innovative research proposals that will advance the reliability, performance, power, security and privacy, scalability, and sustainability of computer systems.

When submitting a CSR proposal, proposers are highly encouraged to pursue computer system issues, with system solutions, and verifiable at the systems level. Issues that are at the device level or at the application level that do not integrate system issues, system view, or system solutions may not be a good fit for the CSR program. The overarching vision could be an application deployable in the field, but that vision must stem from fundamental advancements in computer systems.

CSR proposals should address problems that are appropriate to the CSR Core Area, to one of the current highlighted areas, or to the bridging area of networked systems. Note that proposals that address problems in the CSR highlighted areas are not targeted for special handling or funding — they simply represent emerging areas or areas of current national interest.

In addition, as noted above, CNS invites proposals that bridge the research areas of CSR and NeTS. Some of the topics specified below in the CSR core program description, along with others, are in the realm of “networked systems,” requiring innovations and expertise in both networking and computer systems. CNS welcomes proposals on these topics, which cross the CSR and NeTS core programs — and PIs are encouraged to specify proposal titles that begin with “CSR: NeTS.” (see the Proposal Preparation Instructions for details). These proposals will be considered for co-review by the two CNS core programs as appropriate.

CSR proposals are strongly encouraged to include validation plans that describe mechanisms to assess success of the proposed research efforts.

Validation plan: For proposals submitted to the CSR program, proposers are strongly encouraged to include validation plans that describe the underlying setup, processes, mechanisms, and metrics to assess success of the proposed research. It is understood that proposers may validate their hypotheses through simulations, emulations, benchmarking using testbeds, or a combination of the aforementioned; however, the level of abstraction undertaken to validate the underlying computer systems research must be made very clear in proposals.

CSR Core Area

The CSR program supports transformative research in computing systems ranging from large-scale systems of tiny sensors and embedded computers to multi-core architectures and operating systems, to mobile and sensor systems, and to warehouse-scale cloud back-end systems and beyond. The essence of the CSR vision is the creation of future environments in which large-scale, complex, and heterogeneous systems seamlessly integrate so that the whole is greater than the sum of the individual parts. These future environments include hardware, software, sensing, and the integration of external factors, such as users and physical environments. In addition, we envision systems that provide high degrees of availability, responsiveness, fault-tolerance, and security, either on demand or by design. Finally, research on novel computer systems that push the limits on system properties including speed, storage and data capacity, power consumption, and real-time requirements is encouraged.

Future computer systems are envisioned that are integrated into everyday activities. These systems include remote, high-performance or embedded devices sensing locally and/or remotely across the surrounding environment, and acting on behalf of individuals and even entire societies. We expect significant systems challenges across an abundance of computing systems, their heterogeneity, and the need to integrate peripheral and smaller with larger computing systems. These and other factors are expected to challenge the way we design, build and sustain computer systems.

The CSR core supports and sustains progress in the contributing disciplinary areas that underlie computing systems including: distributed systems; pervasive and high-performance computing; operating systems and middleware; design and programming models; and real-time, embedded, and hybrid systems.

CSR Highlighted Areas

For this solicitation, there are three CSR highlighted areas: Embedded and Real-time Systems (ERS), Edge Computing (EC) and Extensible Distributed Systems (EDS). These three areas are described below.

- Embedded and Real-time Systems (ERS)
  
  Embedded and real-time systems control devices and physical or engineered systems that range from hearing aids and pacemakers to automobiles, aircraft, chemical processing plants, electrical power grids, and global aviation infrastructure. The ERS highlight area supports research and education in scientific foundations and technology that will revolutionize the design and development of such systems.

  The goal of the ERS highlight area is to supply technologies for designing and building increasingly capable and certifiably dependable embedded and control systems, with real-time, interoperability, survivability, reliability, and security guarantees. Topics of interest include, but are not limited to: embedded systems software and programming methods; real-time services, run-time software and platforms; innovative embedded hardware technology and hardware-software co-design; scalable support for embedded sensing and control applications; architecture and design principles for complex embedded systems; and power and resource management and optimization.

- Edge Computing (EC)

CNS invites proposals that bridge the research areas of CSR and NeTS. Some of the topics specified below in the CSR core program description, along with others, are in the realm of “networked systems,” requiring innovations and expertise in both networking and computer systems. CNS welcomes proposals on these topics, which cross the CSR and NeTS core programs — and PIs are encouraged to specify proposal titles that begin with “CSR: NeTS.” (see the Proposal Preparation Instructions for details). These proposals will be considered for co-review by the two CNS core programs as appropriate.
The rapid growth of mobile applications and the Internet of Things have placed severe demands on cloud infrastructure, which has led to moving computing and data services towards the edge of the cloud. The resulting kinds of architectures, called "edge computing," "cloudlets," "fog computing," and "cloud of things" can reduce data transfer times, remove potential performance bottlenecks, and increase data security and enhance privacy while enabling advanced applications such as swarms of drones and robots, smart city infrastructure, and manageable and upgradable smart building and home infrastructure.

The main goal of the EC highlight area is to stimulate and promote basic research related to algorithms, design, performance, and applications of edge computing approaches and architectures. Topics of interest include, but are not limited to: situational awareness and inferential control; real-time support and quality of service (QoS); resource management; supporting the role (or lack of role) of humans in the loop; security, inclusion of personal devices; privacy enhancement; supporting edge services in resource-constrained, uncertain and unreliable environments; and novel edge services, exploiting heterogeneous wireless links and edge application-specific networking patterns given limited wireless resources. Also of interest is research that explores the joint use of shared and traditional clouds, and the effects of increasingly robust networks on edge computing.

Prospective PIs for the EC highlight area are especially encouraged to consider utilizing the two NSF-FutureCloud prototypes, Chameleon and CloudLab, when formulating their research plans and submitting EC proposals. Detailed descriptions of the hardware and capabilities of each system are available on their respective websites, http://www.chameleoncloud.org and http://www.cloudlab.us. Both systems are currently open for use, with application instructions available on their websites.

- **Extensible Distributed Systems (EDS)**

  With the proliferation of networked and portable computing devices that are increasingly everywhere around us (in our pockets, on our wrists and ankles, and in our cars and homes, etc.), a new generation of distributed systems is emerging. These heterogeneous systems extend traditional server and cloud systems and require close interactions with individuals who own and operate the computing devices. Users expect these systems to be robust, reliable, safe, secure, and efficient. At the same time, new applications leveraging these systems require a rich environment that enables sensing and computing along with communication among the devices and between the devices and warehouse-scale facilities via the cloud. This coupling underpins many ‘smart’ technologies and infrastructures of the future, such as smart buildings and informatics infrastructures, intelligent transportation systems, and smart energy distribution and consumption systems, as well as how humans interact with such technologies and infrastructures.

  The goal of the EDS highlight area is to support research into the science and design of extensible distributed systems, advancing software and hardware architectures to enable us to integrate and aggregate from the smallest scale systems to systems without bounds. Topics of interest include, but are not limited to: systems models and programming abstractions that make it easy to compose components and modules to create richer applications; architectures that enable humans to better manage and maintain the applications and the systems upon which they run; tools for assessing the safety and security of applications that interact with the physical world; methods and tools for assessing uncertainty and the tradeoffs of uncertainty, time, and usability, as well as for balancing constraints such as power, energy, form factor, tight time, computational capacity, consistency, reliability, dependability, and performance; and approaches for data storage and recovery for EDS.

Both the CSR Core and the CSR highlighted areas seek proposals focused on advances in systems computing and systems programming that are particular to an application domain or a specific hardware platform as well as generic across domains and platforms.

**Networking Technology and Systems (NeTS)**

Computer and communication networks need to be available anytime and anywhere, and be accessible from any device. Networks need to evolve over time to incorporate new technologies, support new classes of applications and services, and meet new requirements and challenges; networks need to scale and adapt to unforeseen events and uncertainties across multiple dimensions, including types of applications, size and topology, mobility patterns, and heterogeneity of devices and networking technologies.

Networking needs to be easily controllable and manageable, resource and energy efficient, and secure and resilient to failures and attacks. The Networking Technology and Systems (NeTS) program supports transformative research on fundamental scientific and technological advances in networking as well as systems research leading to the development of future-generation, high-performance networks and future Internet architectures.

NeTS proposals should address problems that are appropriate to the NeTS Core Area, to one of the current Highlighted Areas, or to the bridging area of networked systems. Note that proposals that address problems in the NeTS highlighted areas are not targeted for special handling or funding -- they simply represent emerging areas or areas of current national interest.

In addition, as noted above, **CNS invites proposals that bridge the research areas of CSR and NeTS.** Some of the topics specified below in the NeTS core program description, along with others, are in the realm of "networked systems," requiring innovations and expertise in both networking and computer systems. CNS welcomes proposals on these topics, which cross the CSR and NeTS core programs -- and PIs are encouraged to specify proposal titles that begin with “CSR: NeTS:” (see the Proposal Preparation Instructions for details). These proposals will be considered for co-review by the two CNS core programs as appropriate.

NeTS proposals are strongly encouraged to include validation plans that describe mechanisms to assess success of the proposed research efforts.

**Validation plan:** Proposals that choose to validate their hypothesis such as through simulation, emulation or testbed experiments must adequately describe mechanisms to assess success of the proposed research efforts.

**NeTS Core Area**

The NeTS program seeks fundamental scientific understanding of and advances in large-scale, complex, heterogeneous communications networks, including, but not limited to, home, enterprise, data center, cloud, and Internet or Internet-scale networks, and in the wireless areas of cellular, vehicular, mesh, sensor, body area, and underwater networks. NeTS seeks novel frameworks, architectures, protocols, methodologies, and tools for the design and analysis, development, operation, and management of robust and highly dependable networks, including autonomous networks in which the need for human intervention is minimal. The program also
seeks projects that enable energy-efficient operation with low control and communication overhead in wireless networks.

**NeTS Highlighted Areas**

For this solicitation, there are four highlighted areas: **Network Analytics and Management**, **Wireless Network Architectures and Protocols**, **Next-Generation Virtualized Networks/Infrastructure**, and **Optical Networking**. These areas are described below.

- **Network Analytics and Management**
  For wired and wireless networks, NeTS invites innovative solutions to the problems of network analytics and management, such as diagnostics, debugging, provisioning, operations, self-configuration and automated network management. NeTS also invites innovative solutions to problems of obtaining accurate information on network performance and impairments with a view to informing users of network behavior and potential bottlenecks. Research leading to an improved understanding and assessment of network users’ Quality of Experience is sought. NeTS is looking for novel methods and semantics to describe, simulate and reproduce network state and evolution by better characterization of the heterogeneous physical layers underlying emerging networks, as well as by novel research towards the creation of representative synthetic datasets to enable reproducible research.

- **Wireless Network Architectures and Protocols**
  A diverse multitude of novel physical layer technologies are emerging. Examples include ultra-wideband millimeter-wave communications, cognitive radios, free-space optics and visible light communications, high-bandwidth airborne and underwater communication platforms, and perpetually-operating energy-harvesting ultra-low power sensors. At the same time, advances in hardware, signal processing, and computing systems are promising an innovative suite of higher-layer services that can be deployed using wireless communications as a seamless enabler. Examples include wireless localization, virtualization, mobile sensing, and spectrum measurement. In order to realize the full promise of these developments, network architecture design strategies, principles and protocols need to be re-visited.

  NeTS invites proposals that address architectural and protocol considerations of such greenfield wireless-enabled systems. NeTS welcomes proposals that are able to address key questions relating to high throughput, low latency, pervasive connectivity, information availability, reliability, and security, while supporting a rich set of higher-layer services in such systems. Proposers should consider critical operational parameters such as location management, identity management, user privacy, user mobility, power/energy constraints, network heterogeneity, spectral agility, and at-scale behavior.

- **Next-Generation Virtualized Networks/Infrastructure**
  NeTS welcomes transformative ideas that advance technologies associated with Software Defined Networking (SDN) and Software Defined Infrastructure (SDI), and their uses. Examples of topic areas include:
  - Next-generation protocols for control of virtualized infrastructure;
  - Management of virtualized infrastructure, especially in cases where the virtualized infrastructure is dynamically changing;
  - Techniques for mapping of applications onto virtualized infrastructure such that security, performance, resilience and other properties are preserved or enhanced;
  - Approaches to deploying virtualized network functions at scale, and orchestration of complex service chains; Novel virtualization techniques for wireless networks spanning the home, access, enterprise and cellular network domains; and
  - Investigations of models, platforms, toolchains, applications, and management (e.g., field reconfigurability) of emerging programmable packet processors in support of software-defined data planes.

- **Optical Networking**
  Optical networks are challenged to continue to increase capacity to support the exponential growth of traffic and to deliver an agile, power- and cost-efficient network substrate that can be seamlessly integrated with future network architectures and dynamically tailored to application needs. NeTS invites transformative proposals that radically change the capabilities and push the limits of networks by leveraging developments in photonic technologies, integration, and signal processing and/or innovation in network architectures, control and management. NeTS is especially interested in proposals on future ultra-high-bandwidth systems capable of close integration with computation and storage at performance, power and cost factors superior to today's high-speed systems. NeTS also invites proposals that seamlessly integrate optical and wireless networks to enable agile, low-latency, robust high-bandwidth access networks.

**PROJECT CLASSES**

Proposals submitted to this solicitation must be consistent with one of three project classes defined below. Proposals will be considered for funding within their project classes.

- **SMALL Projects**
  Small Projects, with total budgets up to $500,000 for durations of up to three years, are well suited to one or two investigators (PI and one co-PI or other Senior Personnel) and at least one student and/or postdoc. A collaboration plan (up to 2 pages) may be provided under Supplementary Documentation. Please see Proposal Preparation Instructions Section V.A for additional submission guidelines.

- **MEDIUM Projects**
  Medium Projects, with total budgets ranging from $500,001 to $1,200,000 for durations up to four years, are well suited to one or more investigators (PI, co-PI and/or other Senior Personnel) and several students and/or postdocs. Medium project descriptions must be comprehensive and well-integrated, and should make a convincing case that the collaborative contributions of the project team will be greater than the sum of each of their individual contributions. Rationale must be provided to explain why a budget of this size is required to carry out the proposed work. Since the success of collaborative
research efforts are known to depend on thoughtful coordination mechanisms that regularly bring together the various participants of the project, a Collaboration Plan is required for any Medium project with more than one investigator. Even when the investigators are affiliated with the same institution, Up to 2 pages are allowed for Collaboration Plans and they must be submitted as a document under Supplementary Documentation. The length of and level of detail provided in the Collaboration Plan should be commensurate with the complexity of the proposed project. Collaboration plans and proposed budgets should demonstrate that key personnel, and especially lead PIs, have allocated adequate time for both their individual technical contributions and the leadership of collaborative activities necessary to realize the synergistic effects of larger-scale research. If a Medium project with more than one investigator does not include a Collaboration Plan, that proposal will be returned without review. Please see Proposal Preparation Instructions Section V.A for additional submission guidelines.

- LARGE Projects

Large projects may only be submitted to the NeTS program. Large proposals submitted to the CSR program or simultaneously to the CSR program and any other CISE core program will be Returned Without Review (RWR).

Large Projects, with total budgets ranging from $1,200,001 to $3,000,000 for durations of up to five years, are well suited to two or more investigators (PI, co-PI(s), or other Senior Personnel), and a team of students and/or postdocs. Large project descriptions must be comprehensive and well-integrated, and should make a convincing case that the collaborative contributions of the project team will be greater than the sum of each of their individual contributions. Large projects will typically integrate research from various areas, either within a cluster or across clusters, or tackle ambitious goals not feasible with smaller projects. Rationale must be provided to explain why a budget of this size is required to carry out the proposed work. Since the success of collaborative research efforts is known to depend on thoughtful coordination mechanisms that regularly bring together the various participants of the project, a Collaboration Plan is required for all Large projects. Up to 2 pages are allowed for Collaboration Plans and they must be submitted as a document under Supplementary Documentation. The length of and degree of detail provided in the Collaboration Plan should be commensurate with the complexity of the proposed project. Collaboration plans and proposed budgets should demonstrate that key personnel, and especially lead PIs, have allocated adequate time for both their individual technical contributions and the leadership of collaborative activities necessary to realize the synergistic effects of larger-scale research. If a Large project does not include a Collaboration Plan, that proposal will be returned without review. Please see Proposal Preparation Instructions Section V.A for additional submission guidelines.

BROADENING PARTICIPATION

CISE is committed to enhancing the community’s awareness of and overcoming barriers to Broadening Participation in Computing (BPC), and to providing information and resources to principal investigators (PIs) so that they can develop interest, skills, and activities in support of BPC at all levels of the CISE community (K-12, undergraduate, graduate, and postgraduate). Indeed, CISE supports meaningful actions that address the longstanding underrepresentation of various populations including women, minorities (African Americans/Blacks, Hispanic Americans, American Indians, Alaska Natives, Native Hawaiians, Native Pacific Islanders, and persons from economically disadvantaged backgrounds), and persons with disabilities, in the computing field. Towards this end, with this solicitation, CISE is initiating a pilot BPC effort. Beginning with submissions to this solicitation, all PIs are strongly encouraged to include meaningful BPC plans in the Broader Impacts sections of their submitted proposals, and/or to begin preparing to include such plans in future proposal submissions. More information, including examples of meaningful BPC activities and metrics, can be found on the CISE BPC webpage: https://www.nsf.gov/cise/bpc.

PROPOSALS FOR CONSIDERATION BY MULTIPLE CISE PROGRAMS

Proposals that intersect more than one CISE research program are welcome. In such cases, PIs must identify the most relevant programs in the proposal submission process (for information about submission and how to identify such proposals, see Proposal Preparation Instructions later in this document). CISE Program Officers will ensure that these proposals are co-reviewed as appropriate.

IMPORTANT PROJECT CHARACTERISTICS

The submission of far-reaching, creative research and education projects is encouraged. Funds will be used to support potentially transformative research with high-impact potential. In this way, CISE will catalyze exciting new research activities with the potential to make significant advances in the state-of-the-art.

Interdisciplinary, international and/or academic-industry collaborations that promise to result in major science or engineering advances are welcome. The directorate hopes to attract proposals from faculty at a broad range of academic institutions, including faculty at minority-serving and predominantly undergraduate institutions.

Proposals submitted should demonstrate that rich learning experiences will be provided for a diverse population of students and may propose the development of innovative curricula or educational materials that advance literacy about and expertise in areas supported by CISE.

Scientific progress often results by considering a special case of a general problem. If the proposed research falls into this category, PIs can help the reviewers and NSF staff better understand the intellectual merit and/or broader impacts of the proposal by discussing to what extent the findings are likely to generalize.

EMBEDDED REU SUPPLEMENTS

The Research Experiences for Undergraduates (REU): Sites and Supplements solicitation (NSF 13-542) gives instructions for embedding a request for an REU Supplement in a proposal. Proposers are invited to embed a request for an REU Supplement in the typical amount for one year only according to normal CISE guidelines (detailed below). The amounts of the REU Supplements do not count against the budget limitations described in this solicitation for the Small, Medium, and Large project classes.

For single investigator projects, CISE REU supplemental funding requests should typically be for no more than two students for one year. Research teams funded through multi-investigator projects may request support for a larger number of students, commensurate with the size and nature of their projects. For example, for projects involving two principal investigators, REU supplemental funding is
typically requested for about four undergraduates for one year. Requests for larger numbers of students should be accompanied by detailed justifications.

CISE expects to provide up to $8,000 per student per year through the REU supplemental support mechanism. As described in the REU program solicitation (NSF 13-542), indirect costs (F&A) are not allowed on Participant Support Costs in REU Site or REU Supplement budgets.

REU stipend support is one way to retain talented students in undergraduate education, while providing meaningful research experiences. The participation of students from groups underrepresented in computing-underrepresented minorities, women and persons with disabilities—is strongly encouraged. In addition, CISE encourages REU supplements that specifically afford US veterans an opportunity to engage in meaningful research experiences.

CISE REU supplemental funding requests must describe results of any previous such support, including students supported, papers published, etc. Other factors influencing supplemental funding decisions include the number of REU requests submitted by any one principal investigator across all of her/his CISE grants.

Investigators are encouraged to refer to the current REU program solicitation (NSF 13-542) for detailed information concerning submission requirements. Grantees with questions may also contact one of the Cognizant Program Officers listed in this solicitation.

III. AWARD INFORMATION

Up to $60 million each year will support up to 150 awards, pending the availability of funds.

IV. ELIGIBILITY INFORMATION

Who May Submit Proposals:

Proposals may only be submitted by the following:

- Universities and Colleges - Universities and two- and four-year colleges (including community colleges) accredited in, and having a campus located in, the US acting on behalf of their faculty members. Such organizations also are referred to as academic institutions.
- Non-profit, non-academic organizations: Independent museums, observatories, research labs, professional societies and similar organizations in the U.S. associated with educational or research activities.

Who May Serve as PI:

PIs, co-PIs or other senior project personnel must hold primary, full-time, paid appointments in research or teaching positions at US-based campuses/offices of eligible organizations.

Limit on Number of Proposals per Organization:

There are no restrictions or limits.

Limit on Number of Proposals per PI or Co-PI: 2

In any contiguous September through November period, an individual may participate as PI, Co-PI or Senior Personnel in no more than two Small, Medium, or Large proposals submitted in response to the coordinated solicitation (where coordinated solicitation is defined to include the Computer and Network Systems (CNS): Core Programs, Computing and Communication Foundations (CCF): Core Programs, and the Information and Intelligent Systems (IIS): Core Programs solicitations). For example, between September 2017 and November 2017, an individual may participate as PI, co-PI or Senior Personnel in one proposal submitted to a core program in CCF and in a second proposal submitted to a core program in CNS, or an individual may participate as PI, co-PI or Senior Personnel in two proposals submitted to an IIS core program, etc.

These eligibility constraints will be strictly enforced in order to treat everyone fairly and consistently. In the event that an individual exceeds this limit, proposals received within the limit will be accepted based on earliest date and time of proposal submission (i.e., the first two proposals received will be accepted and the remainder will be returned without review). No exceptions will be made.

The limit on the number of proposals per PI, co-PI or Senior Personnel applies only to the coordinated solicitation.

Additional Eligibility Info:

For US universities and two- and four-year colleges and non-profit, non-academic organizations with overseas campuses/offices, this solicitation restricts eligibility to research activities using the facilities, equipment, and other resources of the campuses/offices located in the US only.

Further, subawards are not permitted to overseas campuses/offices of US-based proposing organizations.
V. PROPOSAL PREPARATION AND SUBMISSION INSTRUCTIONS

A. Proposal Preparation Instructions

**Full Proposal Preparation Instructions:** Proposers may opt to submit proposals in response to this Program Solicitation via Grants.gov or via the NSF FastLane system.

- Full proposals submitted via FastLane: Proposals submitted in response to this program solicitation should be prepared and submitted in accordance with the general guidelines contained in the NSF Proposal & Award Policies & Procedures Guide (PAPPG). The complete text of the PAPPG is available electronically on the NSF website at: https://www.nsf.gov/publications/pub_summ.jsp?ods_key=pappg. Paper copies of the PAPPG may be obtained from the NSF Publications Clearinghouse, telephone (703) 292-7827 or by e-mail from nsfpubs@nsf.gov. Proposers are reminded to identify this program solicitation number in the program solicitation block on the NSF Cover Sheet For Proposal to the National Science Foundation. Compliance with this requirement is critical to determining the relevant proposal processing guidelines. Failure to submit this information may delay processing.

- Full proposals submitted via Grants.gov: Proposals submitted in response to this program solicitation via Grants.gov should be prepared and submitted in accordance with the NSF Grants.gov Application Guide: A Guide for the Preparation and Submission of NSF Applications via Grants.gov. The complete text of the NSF Grants.gov Application Guide is available on the Grants.gov website and on the NSF website at: (https://www.nsf.gov/publications/pub_summ.jsp?ods_key=grantsgovguide). To obtain copies of the Application Guide and Application Forms Package, click on the Apply tab on the Grants.gov site, then click on the Apply Step 1: Download a Grant Application Package and Application Instructions link and enter the funding opportunity number, (the program solicitation number without the NSF prefix) and press the Download Package button. Paper copies of the Grants.gov Application Guide also may be obtained from the NSF Publications Clearinghouse, telephone (703) 292-7827 or by e-mail from nsfpubs@nsf.gov.

In determining which method to utilize in the electronic preparation and submission of the proposal, please note the following:

Collaborative Proposals. All collaborative proposals submitted as separate submissions from multiple organizations must be submitted via the NSF FastLane system. PAPPG Chapter II.D.3 provides additional information on collaborative proposals.

See PAPPG Chapter II.C.2 for guidance on the required sections of a full research proposal submitted to NSF. Please note that the proposal preparation instructions provided in this program solicitation may deviate from the PAPPG instructions.

The following information SUPPLEMENTS (note that it does NOT replace) the guidelines provided in the NSF Proposal & Award Policies & Procedures Guide (PAPPG).

**Cover Page:** PIs submitting Grant Opportunities for Academic Liaison with Industry (GOALI) proposals should select “GOALI” from the Type of Proposal drop down list in the Proposal Preparation module in FastLane or Grants.gov. Please see Chapter II.E.4 of the PAPPG for additional information about preparing a GOALI proposal: https://www.nsf.gov/pubs/policydocs/pappg17_1/pappg_2.jsp#II.E4.

**Proposal Titles:**

Proposal titles should begin with an acronym that indicates the most relevant core program. Select an acronym from the following list:

- Computer Systems Research: CSR
- Networking Technology and Systems: NeTS
- Networking and Information Sciences: NIS

The acronym should be followed with a colon, then the project class followed by a colon, then the title of your project. For example, if you are submitting a Medium proposal to the Networking Technology and Systems core program, then your title would be **NeTS: Medium: Title**.

Proposals in the bridging area of networked systems, which cross the CSR and NeTS core programs, should begin “CSR: NeTS:” then the project class followed by a colon, then the proposal title, i.e., **CSR: NeTS: Small: Title**.

If you submit a proposal as part of a set of collaborative proposals, the title of the proposal should begin with the acronym that indicates the most relevant core program followed by a colon, then the project class followed by a colon, then “Collaborative Research” followed by a colon, and the title. For example, if you are submitting a collaborative set of proposals for a Large project to the NeTS core program, the title of each would be **NeTS: Large: Collaborative Research: Title**.

Proposals from PIs in institutions that have RUI (Research in Undergraduate Institutions) eligibility should have a proposal title that begins with the acronym that indicates the most relevant core program acronym, followed by a colon then the project class, followed by a colon then “RUI,” followed by a colon and then the title, for example, **CSR: Small: RUI: Title**.

PIs submitting GOALI proposals should have a proposal title that begins with the acronym that indicates the most relevant core program acronym, followed by a colon then the project class, followed by a colon then “GOALI,” followed by a colon and then the title, for example, **NeTS: Small: GOALI: Title**.

Proposals that extend beyond the scope of one CISE core program or area are welcome. Proposals should be submitted in response to the solicitation for the CISE division (CCF, CNS or IIS) that includes the most relevant core program. In such cases, PIs should identify the acronym for the most relevant core program or area, followed by any other relevant program acronym(s) separated by colons (for example, **NeTS: CCF: CNS: IIS: Title**).
Proposals must include a Collaboration Plan of up to 2 pages, that proposal will be returned without review. Since the success of collaborative research efforts are known to depend on thoughtful coordination mechanisms that regularly bring together the various participants of the project, the Collaboration Plan must include: 1) a discussion of the broader impacts of the proposed activities. Proposals without this clearly-identifiable section will be returned without review.

Results from Prior NSF Support: If any PI or co-PI identified on the proposal has received NSF funding with a start date in the past five years (including any current funding and no-cost extensions), information on the award is required for each PI and co-PI, regardless of whether the support was directly related to the proposal. In cases where the PI or co-PI has received more than one award (excluding amendments), they need only report on the one award most closely related to the proposal.

The Project Description must contain, as a separate section within the narrative, a section labeled “Broader Impacts.” This section should include a discussion of the broader impacts of the proposed activities. Proposals without this clearly-identifiable section will be returned without review.

Supplementary Documents:

In the Supplementary Documents Section, upload the following information where relevant:

(1) A list of Project Personnel and Partner Institutions (Note: In collaborative proposals, the lead institution should provide this information for all participants):

Provide current, accurate information for all personnel and institutions involved in the project. NSF staff will use this information in the merit review process to manage conflicts of interest. The list should include all PIs, Co-PIs, Senior Personnel, paid/unpaid Consultants or Collaborators, Subawardees, Postdocs, and project-level advisory committee members. This list should be numbered and include (in this order) Full name, Organization(s), and Role in the project, with each item separated by a semi-colon. Each person listed should start a new numbered line. For example:

1. Mary Smith; XYZ University; PI
2. John Jones; University of PQP; Senior Personnel
3. Jane Brown; XYZ University; Postdoc
4. Bob Adams; ABC Community College; Paid Consultant
5. Susan White; DEF Corporation; Unpaid Collaborator
6. Tim Green; ZZZ University; Subawardee

(2) Collaboration Plans for Medium and Large projects (if applicable):

Note: In collaborative proposals, the lead institution should provide this information for all participants.

Since the success of collaborative research efforts are known to depend on thoughtful coordination mechanisms that regularly bring together the various participants of the project, all Medium proposals that include more than one investigator and all Large proposals must include a Collaboration Plan of up to 2 pages. The length of and degree of detail provided in the Collaboration Plan should be commensurate with the complexity of the proposed project. Where appropriate, the Collaboration Plan might include: 1) the specific roles of the project participants in all organizations involved; 2) information on how the project will be managed across all the investigators, institutions, and/or disciplines; 3) identification of the specific coordination mechanisms that will enable cross-investigator, cross-institution, and/or cross-discipline scientific integration (e.g., yearly workshops, graduate student exchange, project meetings at conferences, use of the grid for videoconferences, software repositories, etc.); and 4) specific references to the budget line items that support collaboration and coordination mechanisms.

If a Large proposal, or a Medium proposal with more than one investigator, does not include a Collaboration Plan of up to 2 pages, that proposal will be returned without review.

(3) Data Management Plan (required):

Proposals must include a supplementary document of no more than two pages labeled "Data Management Plan." This supplementary document should describe how the proposal will conform to NSF policy on the dissemination and sharing of research results.

See Chapter II.C.2.j of the PAPPG for full policy implementation.
For additional information on the Dissemination and Sharing of Research Results, see: https://www.nsf.gov/bfa/dias/policy/dmp.jsp.

(4) Documentation of collaborative arrangements of significance to the proposal through Letters of Collaboration:

There are two types of collaboration, one involving individuals/organizations that are included in the budget, and the other involving individuals/organizations that are not included in the budget. Collaborations that are included in the budget should be described in the Project Description. Any substantial collaboration with individuals/organizations not included in the budget should be described in the Facilities, Equipment and Other Resources section of the proposal (see PAPPG Chapter II.C.2.i). In either case, whether or not the collaborator is included in the budget, a letter of collaboration from each named participating organization other than the submitting lead, non-lead, and/or subawardee institutions should be provided at the time of submission of the proposal. Such letters should explicitly state the nature of the collaboration, appear on the organization’s letterhead and be signed by the appropriate organizational representative. These letters must not otherwise deviate from the restrictions and requirements set forth in the PAPPG, Chapter II.C.2.j.

Please note that letters of support may not be submitted. Such letters do not document collaborative arrangements of significance to the project, but primarily convey a sense of enthusiasm for the project and/or highlight the qualifications of the PI or co-PI. Reviewers will be instructed not to consider these letters of support in reviewing the merits of the proposal.

(5) Other specialized information:

RUI Proposals: PIs from predominantly undergraduate institutions should include a Research in Undergraduate Institutions (RUI) Impact Statement and Certification of RUI Eligibility in this section.

GOALI proposals: PIs submitting GOALI proposals should include industry-university agreement letters on intellectual property in this section.

No other Supplementary Documents, except as permitted by the NSF PAPPG, are allowed.

Single Copy Documents:

Collaborators and Other Affiliations Information: In lieu of the instructions specified in the PAPPG, Collaborators and Other Affiliations Information should be submitted as follows:

For this solicitation, the Collaborators & Other Affiliations (COA) information specified in the PAPPG should be submitted using the spreadsheet template found at https://www.nsf.gov/bfa/dias/policy/coa.jsp. For each proposal, a completed spreadsheet for each PI, co-PI, and Senior Personnel should be uploaded directly into Fastlane in .xls or .xlsx format as a “Collaborator and Other Affiliations” Single Copy Document. NSF staff use this information in the merit review process to help manage reviewer selection; the spreadsheet will ensure the COA information has a common, searchable format. Submitters using grants.gov may upload this document as a PDF.

Submission Checklist:

In an effort to assist proposal preparation, the following checklists are provided as a reminder of the items that should be checked before submitting a CSR or NeTS proposal to this solicitation. These are a summary of the requirements described above. For the items marked with (RWR), the proposal will be returned without review if the required item is noncompliant at the submission deadline.

Note that there are five lists: (1) for all proposals, unique to this solicitation; (2) for all proposals, selected items from the PAPPG; (3) additional requirements for Small proposals; (4) additional requirements for Medium proposals; and (5) additional requirements for Large proposals.

For all proposals, regardless of size:

- Letters of Collaboration are permitted as Supplementary Documents. Letters of Support are not allowed; reviewers will be instructed not to consider these letters in reviewing the merits of the proposal.
- Should include Collaborators & Other Affiliations (COA) for each PI, co-PI, and Senior Personnel, using the spreadsheet template to upload as Single Copy COA Documents.
- The last line of the Project Summary should consist of the word “Keywords” followed by a colon and between 2-6 keyword sets, separated by semi-colons.

The following items are not specific to this solicitation, but are included as reminders, and apply to all NSF proposals unless otherwise noted by the solicitations (see the PAPPG for further information). This is a summary of key items, but does not replace the complete set of requirements in the PAPPG.

- (RWR) Within the Project Description, a section labeled “Broader Impacts”.
- (RWR) Within the Project Description, a description of “Results from Prior NSF Support”, including intellectual merit and broader impacts (or a specific statement indicating that the PI has no prior NSF support).
- (RWR) If the budget includes postdoctoral researchers, a one-page Postdoctoral Researcher Plan must be included as a Supplementary Document.
- (RWR) A Data Management Plan, not to exceed two pages, must be included.

For Small proposals:

- The title should start with one of the following strings (submissions intended for CSR and/or NeTS and also additional core programs described in the CCF or IIS core solicitations should follow a similar pattern):
  - NetS: Small:
  - NeTS: Small: Collaborative:
  - CSR: Small:
  - CSR: Small: Collaborative:
CSR: NeTS: Small:
CSR: NeTS: Small: Collaborative:

In addition to the above title prefixes, proposals from PIs in institutions that have RUI (Research in Undergraduate Institutions) eligibility should include "RUI:" immediately before the proposal title, for example, CHS: Small: RUI: Title, and should include a Research in Undergraduate Institutions Impact Statement and Certification of RUI Eligibility. Similarly, PIs submitting Grant Opportunities for Academic Liaison with Industry (GOALI) proposals should select "GOALI" from the Type of Proposal drop down list in the Proposal Preparation module in FastLane or Grants.gov; and include "GOALI:" immediately before the proposal title, for example, RI: Small: GOALI: Title.

(RWR) Maximum budget shown on the cover page and on the budget sheets must not exceed $500,000, plus funds for embedded REU supplements.

(RWR) The Project Description is limited to no more than 15 pages.

A collaboration plan (up to 2 pages) may be provided as a supplementary document.

For Medium proposals:

- The title should start with one of the following strings (submissions intended for CSR and/or NeTS and also additional core programs described in the CCF or IIS core solicitations should follow a similar pattern):
  - NeTS: Medium:
  - CHS: Medium: Mitarbeiter: Title
  - CSR: Medium: Collaborative:
  - NeTS: Medium: Collaborative:

- In addition to the above title prefixes, proposals from PIs in institutions that have RUI (Research in Undergraduate Institutions) eligibility should include "RUI:" immediately before the proposal title, for example, CHS: Medium: RUI: Title, and should include a Research in Undergraduate Institutions Impact Statement and Certification of RUI Eligibility. Similarly, PIs submitting Grant Opportunities for Academic Liaison with Industry (GOALI) proposals should select "GOALI" from the Type of Proposal drop down list in the Proposal Preparation module in FastLane or Grants.gov; and include "GOALI:" immediately before the proposal title, for example, RI: Medium: GOALI: Title.

(RWR) The budget shown on the cover page and on the budget sheets be $500,001 to $1,200,000, plus funds for embedded REU supplements.

(RWR) The Project Description is limited to no more than 15 pages.

(RWR) If there is more than one investigator, a collaboration plan (up to 2 pages) must be provided as a supplementary document, even if all investigators are affiliated with the same institution.

For Large proposals:

- The title should start with one of the following strings (CSR does not accept Large proposals in this solicitation; submissions intended for NeTS and also additional core programs described in the CCF or IIS core solicitations should follow a similar pattern, assuming that all listed programs are accepting Large proposals):
  - NeTS: Large:
  - NeTS: Large: Collaborative:

- In addition to the above title prefixes, proposals from PIs in institutions that have RUI (Research in Undergraduate Institutions) eligibility should include "RUI:" immediately before the proposal title, for example, CHS: Large: RUI: Title, and should include a Research in Undergraduate Institutions Impact Statement and Certification of RUI Eligibility. Similarly, PIs submitting Grant Opportunities for Academic Liaison with Industry (GOALI) proposals should select "GOALI" from the Type of Proposal drop down list in the Proposal Preparation module in FastLane or Grants.gov; and include "GOALI:" immediately before the proposal title, for example, RI: Large: GOALI: Title.

(RWR) The budget shown on the cover page and on the budget sheets be $1,200,001 to $3,000,000, plus funds for embedded REU supplements.

(RWR) The Project Description is limited to no more than 20 pages.

(RWR) A collaboration plan (up to 2 pages) must be provided as a supplementary document, even if all investigators are affiliated with the same institution.

Proposals that do not comply with the requirements marked as RWR will be returned without review.

B. Budgetary Information

Cost Sharing:

Inclusion of voluntary committed cost sharing is prohibited.

Other Budgetary Limitations:

Budgets must comply with the range limitations specified for each project class.

C. Due Dates

- Submission Window Date(s) (due by 5 p.m. submitter's local time):
  
  September 20, 2017 - September 27, 2017

  MEDIUM Projects
D. FastLane/Grants.gov Requirements

For Proposals Submitted Via FastLane:

To prepare and submit a proposal via FastLane, see detailed technical instructions available at: https://www.fastlane.nsf.gov/a1/newstan.htm. For FastLane user support, call the FastLane Help Desk at 1-800-673-6188 or e-mail fastlane@nsf.gov. The FastLane Help Desk answers general technical questions related to the use of the FastLane system. Specific questions related to this program solicitation should be referred to the NSF program staff contact(s) listed in Section VIII of this funding opportunity.

For Proposals Submitted Via Grants.gov:

Before using Grants.gov for the first time, each organization must register to create an institutional profile. Once registered, the applicant's organization can then apply for any federal grant on the Grants.gov website. Comprehensive information about using Grants.gov is available on the Grants.gov Applicant Resources webpage: https://www.grants.gov/web/grants/applicants.html. In addition, the NSF Grants.gov Application Guide (see link in Section V.A) provides instructions regarding the technical preparation of proposals via Grants.gov. For Grants.gov user support, contact the Grants.gov Contact Center at 1-800-515-4726 or by email: support@grants.gov. The Grants.gov Contact Center answers general technical questions related to the use of Grants.gov. Specific questions related to this program solicitation should be referred to the NSF program staff contact(s) listed in Section VIII of this solicitation.

Submitting the Proposal: Once all documents have been completed, the Authorized Organizational Representative (AOR) must submit the application to Grants.gov and verify the desired funding opportunity and agency to which the application is submitted. The AOR must then sign and submit the application to Grants.gov. The completed application will be transferred to the NSF FastLane system for further processing.

Proposers that submitted via FastLane are strongly encouraged to use FastLane to verify the status of their submission to NSF. For proposers that submitted via Grants.gov, until an application has been received and validated by NSF, the Authorized Organizational Representative may check the status of an application on Grants.gov. After proposers have received an e-mail notification from NSF, Research.gov should be used to check the status of an application.

VI. NSF PROPOSAL PROCESSING AND REVIEW PROCEDURES

Proposals received by NSF are assigned to the appropriate NSF program for acknowledgement and, if they meet NSF requirements, for review. All proposals are carefully reviewed by a scientist, engineer, or educator serving as an NSF Program Officer, and usually by three to ten other persons outside NSF either as ad hoc reviewers, panelists, or both, who are experts in the particular fields represented by the proposal. These reviewers are selected by Program Officers charged with oversight of the review process. Proposers are invited to suggest names of persons they believe are especially well qualified to review the proposal and/or persons they would prefer not review the proposal. These suggestions may serve as one source in the reviewer selection process at the Program Officer's discretion. Submission of such names, however, is optional. Care is taken to ensure that reviewers have no conflicts of interest with the proposal. In addition, Program Officers may obtain comments from site visits before recommending final action on proposals.

Senior NSF staff further review recommendations for awards. A flowchart that depicts the entire NSF proposal and award process (and associated timeline) is included in PAPPG Exhibit III-1.

A comprehensive description of the Foundation's merit review process is available on the NSF website at: https://www.nsf.gov/bfa/dias/policy/merit_review/

Proposers should also be aware of core strategies that are essential to the fulfillment of NSF's mission, as articulated in Investing in Science, Engineering, and Education for the Nation's Future: NSF Strategic Plan for 2014-2018. These strategies are integrated in the program planning and implementation process, of which proposal review is one part. NSF's mission is particularly well-implemented through the integration of research and education and broadening participation in NSF programs, projects, and activities.

One of the strategic objectives in support of NSF's mission is to foster integration of research and education through the programs, projects, and activities it supports at academic and research institutions. These institutions must recruit, train, and prepare a diverse STEM workforce to advance the frontiers of science and participate in the U.S. technology-based economy. NSF's contribution to the national innovation ecosystem is to provide cutting-edge research under the guidance of the Nation's most creative scientists and engineers. NSF also supports development of a strong science, technology, engineering, and mathematics (STEM) workforce by investing in building the knowledge that informs improvements in STEM teaching and learning.

NSF's mission calls for the broadening of opportunities and expanding participation of groups, institutions, and geographic regions that are underrepresented in STEM disciplines, which is essential to the health and vitality of science and engineering. NSF is committed to this principle of diversity and deems it central to the programs, projects, and activities it considers and supports.
A. Merit Review Principles and Criteria

The National Science Foundation strives to invest in a robust and diverse portfolio of projects that creates new knowledge and enables breakthroughs in understanding across all areas of science and engineering research and education. To identify which projects to support, NSF relies on a merit review process that incorporates consideration of both the technical aspects of a proposed project and its potential to contribute more broadly to advancing NSF’s mission "to promote the progress of science; to advance the national health, prosperity, and welfare; to secure the national defense; and for other purposes." NSF makes every effort to conduct a fair, competitive, transparent merit review process for the selection of projects.

1. Merit Review Principles

These principles are to be given due diligence by PIs and organizations when preparing proposals and managing projects, by reviewers when reading and evaluating proposals, and by NSF program staff when determining whether or not to recommend proposals for funding and while overseeing awards. Given that NSF is the primary federal agency charged with nurturing and supporting excellence in basic research and education, the following three principles apply:

- All NSF projects should be of the highest quality and have the potential to advance, if not transform, the frontiers of knowledge.
- NSF projects, in the aggregate, should contribute more broadly to achieving societal goals. These "Broader Impacts" may be accomplished through the research itself, through activities that are directly related to specific research projects, or through activities that are supported by, but are complementary to, the project. The project activities may be based on previously established and/or innovative methods and approaches, but in either case must be well justified.
- Meaningful assessment and evaluation of NSF-funded projects should be based on appropriate metrics, keeping in mind the likely correlation between the effect of broader impacts and the resources provided to implement projects. If the size of the activity is limited, evaluation of that activity in isolation is not likely to be meaningful. Thus, assessing the effectiveness of these activities may best be done at a higher, more aggregated, level than the individual project.

With respect to the third principle, even if assessment of Broader Impacts outcomes for particular projects is done at an aggregated level, PIs are expected to be accountable for carrying out the activities described in the funded project. Thus, individual projects should include clearly stated goals, specific descriptions of the activities that the PI intends to do, and a plan in place to document the outputs of those activities.

These three merit review principles provide the basis for the merit review criteria, as well as a context within which the users of the criteria can better understand their intent.

2. Merit Review Criteria

All NSF proposals are evaluated through use of the two National Science Board approved merit review criteria. In some instances, however, NSF will employ additional criteria as required to highlight the specific objectives of certain programs and activities.

The two merit review criteria are listed below. Both criteria are to be given full consideration during the review and decision-making processes; each criterion is necessary but neither, by itself, is sufficient. Therefore, proposers must fully address both criteria. (PAPPG Chapter II.C.2.d(i) contains additional information for use by proposers in development of the Project Description section of the proposal). Reviewers are strongly encouraged to review the criteria, including PAPPG Chapter II.C.2.d(i), prior to the review of a proposal.

When evaluating NSF proposals, reviewers will be asked to consider what the proposers want to do, why they want to do it, how they plan to do it, how they will know if they succeed, and what benefits could accrue if the project is successful. These issues apply both to the technical aspects of the proposal and the way in which the project may make broader contributions. To that end, reviewers will be asked to evaluate all proposals against two criteria:

- Intellectual Merit: The Intellectual Merit criterion encompasses the potential to advance knowledge; and
- Broader Impacts: The Broader Impacts criterion encompasses the potential to benefit society and contribute to the achievement of specific, desired societal outcomes.

The following elements should be considered in the review for both criteria:

1. What is the potential for the proposed activity to
   a. Advance knowledge and understanding within its own field or across different fields (Intellectual Merit); and
   b. Benefit society or advance desired societal outcomes (Broader Impacts)?
2. To what extent do the proposed activities suggest and explore creative, original, or potentially transformative concepts?
3. Is the plan for carrying out the proposed activities well-reasoned, well-organized, and based on a sound rationale? Does the plan incorporate a mechanism to assess success?
4. How well qualified is the individual, team, or organization to conduct the proposed activities?
5. Are there adequate resources available to the PI (either at the home organization or through collaborations) to carry out the proposed activities?

Broader impacts may be accomplished through the research itself, through the activities that are directly related to specific research projects, or through activities that are supported by, but are complementary to, the project. NSF values the advancement of scientific knowledge and activities that contribute to achievement of societally relevant outcomes. Such outcomes include, but are not limited to: full participation of women, persons with disabilities, and underrepresented minorities in science, technology, engineering, and mathematics (STEM); improved STEM education and educator development at any level; increased public scientific literacy and public engagement with science and technology; improved well-being of individuals in society; development of a diverse, globally competitive STEM workforce; increased partnerships between academia, industry, and others; improved national security; increased economic competitiveness of the United States; and enhanced infrastructure for research and education.

Proposers are reminded that reviewers will also be asked to review the Data Management Plan and the Postdoctoral Researcher
Mentoring Plan, as appropriate.

Additional Solicitation Specific Review Criteria

For Large and relevant Medium proposals, reviewers will be asked to:

- Comment on the extent to which the project scope justifies the level of investment requested, and the degree to which the Collaboration Plan (if required) adequately demonstrates that the participating investigators will work synergistically to accomplish the project objectives.
- Comment on whether key personnel, and especially lead PIs, have allocated adequate time for both their individual technical contributions and the leadership of collaborative activities necessary to realize the synergistic effects of larger-scale research.

B. Review and Selection Process

Proposals submitted in response to this program solicitation will be reviewed by Ad hoc Review and/or Panel Review.

Reviewers will be asked to evaluate proposals using two National Science Board approved merit review criteria and, if applicable, additional program specific criteria. A summary rating and accompanying narrative will generally be completed and submitted by each reviewer and/or panel. The Program Officer assigned to manage the proposal's review will consider the advice of reviewers and will formulate a recommendation.

After scientific, technical and programmatic review and consideration of appropriate factors, the NSF Program Officer recommends to the cognizant Division Director whether the proposal should be declined or recommended for award. NSF strives to be able to tell applicants whether their proposals have been declined or recommended for funding within six months. Large or particularly complex proposals or proposals from new awardees may require additional review and processing time. The time interval begins on the deadline or target date, or receipt date, whichever is later. The interval ends when the Division Director acts upon the Program Officer's recommendation.

After programmatic approval has been obtained, the proposals recommended for funding will be forwarded to the Division of Grants and Agreements for review of business, financial, and policy implications. After an administrative review has occurred, Grants and Agreements Officers perform the processing and issuance of a grant or other agreement. Proposers are cautioned that only a Grants and Agreements Officer may make commitments, obligations or awards on behalf of NSF or authorize the expenditure of funds. No commitment on the part of NSF should be inferred from technical or budgetary discussions with a NSF Program Officer. A Principal Investigator or organization that makes financial or personnel commitments in the absence of a grant or cooperative agreement signed by the NSF Grants and Agreements Officer does so at their own risk.

Once an award or declination decision has been made, Principal Investigators are provided feedback about their proposals. In all cases, reviews are treated as confidential documents. Verbatim copies of reviews, excluding the names of the reviewers or any reviewer-identifying information, are sent to the Principal Investigator/Project Director by the Program Officer. In addition, the proposer will receive an explanation of the decision to award or decline funding.

VII. AWARD ADMINISTRATION INFORMATION

A. Notification of the Award

Notification of the award is made to the submitting organization by a Grants Officer in the Division of Grants and Agreements. Organizations whose proposals are declined will be advised as promptly as possible by the cognizant NSF Program administering the program. Verbatim copies of reviews, not including the identity of the reviewer, will be provided automatically to the Principal Investigator. (See Section VI.B. for additional information on the review process).

B. Award Conditions

An NSF award consists of: (1) the award notice, which includes any special provisions applicable to the award and any numbered amendments thereto; (2) the budget, which indicates the amounts, by categories of expense, on which NSF has based its support (or otherwise communicates any specific approvals or disapprovals of proposed expenditures); (3) the proposal referenced in the award notice; (4) the applicable award conditions, such as Grant General Conditions (GC-1)*; or Research Terms and Conditions* and (5) any announcement or other NSF issuance that may be incorporated by reference in the award notice. Cooperative agreements also are administered in accordance with NSF Cooperative Agreement Financial and Administrative Terms and Conditions (CA-FATC) and the applicable Programmatic Terms and Conditions. NSF awards are electronically signed by an NSF Grants and Agreements Officer and transmitted electronically to the organization via e-mail.

*These documents may be accessed electronically on NSF's Website at https://www.nsf.gov/awards/managing/award_conditions.jsp?org=NSF. Paper copies may be obtained from the NSF Publications Clearinghouse, telephone (703) 292-7827 or by e-mail from nsfpubs@nsf.gov.

More comprehensive information on NSF Award Conditions and other important information on the administration of NSF awards is contained in the NSF Proposal & Award Policies & Procedures Guide (PAPPG) Chapter VII, available electronically on the NSF
C. Reporting Requirements

For all multi-year grants (including both standard and continuing grants), the Principal Investigator must submit an annual project report to the cognizant Program Officer no later than 90 days prior to the end of the current budget period. (Some programs or awards require submission of more frequent project reports). No later than 120 days following expiration of a grant, the PI also is required to submit a final project report, and a project outcomes report for the general public.

Failure to provide the required annual or final project reports, or the project outcomes report, will delay NSF review and processing of any future funding increments as well as any pending proposals for all identified PIs and co-PIs on a given award. PIs should examine the formats of the required reports in advance to assure availability of required data.

PIs are required to use NSF’s electronic project-reporting system, available through Research.gov, for preparation and submission of annual and final project reports. Such reports provide information on accomplishments, project participants (individual and organizational), publications, and other specific products and impacts of the project. Submission of the report via Research.gov constitutes certification by the PI that the contents of the report are accurate and complete. The project outcomes report also must be prepared and submitted using Research.gov. This report serves as a brief summary, prepared specifically for the public, of the nature and outcomes of the project. This report will be posted on the NSF website exactly as it is submitted by the PI.

VIII. AGENCY CONTACTS

Please note that the program contact information is current at the time of publishing. See program website for any updates to the points of contact.

General inquiries regarding this program should be made to:

- Jack Brassil, NeTS Program Director, 1175, telephone: (703) 292-8950, email: jbrassil@nsf.gov
- Darleen L. Fisher, NeTS Program Director, 1175, telephone: (703) 292-8950, email: dfisher@nsf.gov
- Samee U. Khan, CSR Program Director, 1175, telephone: (703) 292-8950, email: skhan@nsf.gov
- Sandip Kundu, CSR Program Director, 1175, telephone: (703) 292-8950, email: skundu@nsf.gov
- Mimi McClure, CSR Associate Program Director, 1175, telephone: (703) 292-8950, email: mmclure@nsf.gov
- Thyaga Nandagopal, NeTS Program Director, 1175, telephone: (703) 292-8950, email: tnandago@nsf.gov
- Yan Solihin, CSR Program Director, 1175, telephone: (703) 292-8950, email: ysolihin@nsf.gov
- Ann C. Von Lehmen, NeTS Program Director, 1175, telephone: (703) 292-8950, email: avonlehm@nsf.gov

For questions related to the use of FastLane, contact:

- FastLane Help Desk, telephone: 1-800-673-6188; e-mail: fastlane@nsf.gov.

For questions relating to Grants.gov contact:

- Grants.gov Contact Center: If the Authorized Organizational Representatives (AOR) has not received a confirmation message from Grants.gov within 48 hours of submission of application, please contact via telephone: 1-800-518-4726; e-mail: support@grants.gov.

IX. OTHER INFORMATION

The NSF website provides the most comprehensive source of information on NSF Directorates (including contact information), programs and funding opportunities. Use of this website by potential proposers is strongly encouraged. In addition, "NSF Update" is an information-delivery system designed to keep potential proposers and other interested parties apprised of new NSF funding opportunities and publications, important changes in proposal and award policies and procedures, and upcoming NSF Grants Conferences. Subscribers are informed through e-mail or the user's Web browser each time new publications are issued that match their identified interests. "NSF Update" also is available on NSF’s website.

Grants.gov provides an additional electronic capability to search for Federal government-wide grant opportunities. NSF funding
opportunities may be accessed via this mechanism. Further information on Grants.gov may be obtained at http://www.grants.gov.

ABOUT THE NATIONAL SCIENCE FOUNDATION

The National Science Foundation (NSF) is an independent Federal agency created by the National Science Foundation Act of 1950, as amended (42 USC 1861-75). The Act states the purpose of the NSF is "to promote the progress of science; [and] to advance the national health, prosperity, and welfare by supporting research and education in all fields of science and engineering."

NSF funds research and education in most fields of science and engineering. It does this through grants and cooperative agreements to more than 2,000 colleges, universities, K-12 school systems, businesses, informal science organizations and other research organizations throughout the US. The Foundation accounts for about one-fourth of Federal support to academic institutions for basic research.

NSF receives approximately 55,000 proposals each year for research, education and training projects, of which approximately 11,000 are funded. In addition, the Foundation receives several thousand applications for graduate and postdoctoral fellowships. The agency operates no laboratories itself but does support National Research Centers, user facilities, certain oceanographic vessels and Arctic and Antarctic research stations. The Foundation also supports cooperative research between universities and industry, US participation in international scientific and engineering efforts, and educational activities at every academic level.

Facilitation Awards for Scientists and Engineers with Disabilities (FASED) provide funding for special assistance or equipment to enable persons with disabilities to work on NSF-supported projects. See the NSF Proposal & Award Policies & Procedures Guide Chapter II.E.6 for instructions regarding preparation of these types of proposals.

The National Science Foundation has Telephonic Device for the Deaf (TDD) and Federal Information Relay Service (FIRS) capabilities that enable individuals with hearing impairments to communicate with the Foundation about NSF programs, employment or general information. TDD may be accessed at (703) 292-5090 and (800) 281-8749, FIRS at (800) 877-8339.

The National Science Foundation Information Center may be reached at (703) 292-5111.

The National Science Foundation promotes and advances scientific progress in the United States by competitively awarding grants and cooperative agreements for research and education in the sciences, mathematics, and engineering.

To get the latest information about program deadlines, to download copies of NSF publications, and to access abstracts of awards, visit the NSF Website at https://www.nsf.gov

- Location: 4201 Wilson Blvd. Arlington, VA 22230
- For General Information (NSF Information Center): (703) 292-5111
- TDD (for the hearing-impaired): (703) 292-5090

- To Locate NSF Employees: (703) 292-5111

PRIVACY ACT AND PUBLIC BURDEN STATEMENTS

The information requested on proposal forms and project reports is solicited under the authority of the National Science Foundation Act of 1950, as amended. The information on proposal forms will be used in connection with the selection of qualified proposals; and project reports submitted by awardees will be used for program evaluation and reporting within the Executive Branch and to Congress. The information requested may be disclosed to qualified reviewers and staff assistants as part of the proposal review process; to proposer institutions/grantees to provide or obtain data regarding the proposal review process, award decisions, or the administration of awards; to government contractors, experts, volunteers and researchers and educators as necessary to complete assigned work; to other government agencies or other entities needing information regarding applicants or nominees as part of a joint application review process, or in order to coordinate programs or policy; and to another Federal agency, court, or party in a court or Federal administrative proceeding if the government is a party. Information about Principal Investigators may be added to the Reviewer file and used to select potential candidates to serve as peer reviewers or advisory committee members. See Systems of Records, NSF-50, "Principal Investigator/Proposal File and Associated Records," 69 Federal Register 26410 (May 12, 2004), and NSF-51, "Reviewer/Proposal File and Associated Records," 69 Federal Register 26410 (May 12, 2004). Submission of the information is voluntary. Failure to provide full and complete information, however, may reduce the possibility of receiving an award.

An agency may not conduct or sponsor, and a person is not required to respond to, an information collection unless it displays a valid
Office of Management and Budget (OMB) control number. The OMB control number for this collection is 3145-0058. Public reporting burden for this collection of information is estimated to average 120 hours per response, including the time for reviewing instructions. Send comments regarding the burden estimate and any other aspect of this collection of information, including suggestions for reducing this burden, to:

Suzanne H. Plimpton
Reports Clearance Officer
Office of the General Counsel
National Science Foundation
Arlington, VA 22230
