FIGURE 5-31

S&E publication output in the top 1% of cited publications, by selected region, country, or economy: 2004–14

EU = European Union.

Note(s)
This figure depicts the share of publications that are in the top 1% of the world’s citations, relative to all the country’s publications in that period and field. It is computed as follows: $S_x = \frac{HCP_x}{P_x}$ where $S_x$ is the share of output from country $x$ in the top 1% most-cited articles; $HCP_x$ is the number of articles from country $x$ that are among the top 1% most-cited articles in the world; and $P_x$ is the total number of papers from country $x$ in the database that were published in 2014 or earlier. Citations are presented for the year of publication, showing the counts of subsequent citations from peer-reviewed literature. At least 2 years of data after publication are needed for a meaningful measure. Publications that cannot be classified by country or field are excluded. Articles are classified by the publication year and are assigned to a region, country, or economy on the basis of the institutional address(es) listed in the article. The world average stands at 1.00% for each period and field. See Appendix Table 5-26 for countries included in the EU. See Appendix Table 5-51.
