# NSF Survey of Federal Funds for Research and Development

Volume 67 (FYs 2017–18)

Non-DOD version

National Science Foundation  
WHERE DISCOVERIES BEGIN

## Instructions

### Before You Start

The Volume 67 survey collects only 2 years of data. Estimates for FY 2019 are not requested, so tables and columns which have traditionally asked for the third-year budget estimates have been grayed out.

Please give special attention to the following items when completing the survey:

1. **Complete your submission prior to the May 4, 2018 deadline.**
2. Report actual dollars for all amounts.
3. The data that you submit to the survey should be consistent with the data that your agency submitted to the Office of Management and Budget (OMB) for FY 2017 and FY 2018. Do not wait for later markups or revisions. In Tables 1A and 1B, explain any differences between outlays reported in this survey and those reported to OMB.
4. Verify that all research and development activities are included in your Federal Funds Survey data submission, whether they are represented by a specific R&D appropriation or as parts of other appropriations.
5. If you report any extramural funds on Tables 6 or 7, then you may also have some federal intramural funds to report on these tables if your agency spends funds, at least for staff time, to administer the extramural R&D contract programs. The management and distribution of funds for R&D grants to extramural performers should not be included as R&D.
6. In Table 6B, 6C, 11A, and 11B, explain **ANY** differences between FY 2017 data reported in this survey and in the NSF Survey of Federal Science and Engineering Support to Universities, Colleges, and Nonprofit Institutions (Federal S&E Support Survey) for R&D obligations (Federal Funds Survey Table 6) and R&D plant obligations (Federal Funds Survey Table 11) to universities and colleges excluding FFRDCs and to nonprofit institutions excluding FFRDCs. If you do not know your agency's respondent to the Federal S&E Support Survey, please e-mail us at [NSFFedFunds@smdi.com](mailto:NSFFedFunds@smdi.com).
7. In the comment boxes for the appropriate tables, provide the reasons for **ANY** changes in your obligation levels from those reported in the previous cycle's survey for type of R&D (basic research, applied research, and development), R&D plant, fields of science and engineering, or performers.
8. If your agency sponsors a Federally Funded Research and Development Center (FFRDC), report data on Table 9. If no R&D funds were obligated for your FFRDC for FY 2017, please explain why not in the comment box.
9. If your agency is required to provide obligations by state and performer (Tables 12 and 13), you will be asked to break out obligations reported to "outlying areas" into "Puerto Rico" and "other areas." The sum of these two items must equal the total reported for "outlying areas."

Tables to Complete:

Table	Completed by
1, 1A, 1B, 2, 3, 4, 5, 6, 6A, 7, 8, 9, 10, and 11	All agencies
12 and 13 (Geographic data)	Subset of 11 agencies: the Departments of Agriculture, Commerce, Defense, Energy, Health and Human Services, Homeland Security, the Interior, and Transportation; the Environmental Protection Agency; the National Aeronautics and Space Administration; and the National Science Foundation
14, 15, and 16 (Obligations to universities and colleges)	Subset of 7 agencies: the Departments of Agriculture, Defense, Energy, Health and Human Services, and Homeland Security; the National Aeronautics and Space Administration; and the National Science Foundation
6B, 6C, 11A, and 11B	All agencies except the Department of Defense, but these tables are optional

### Contact Information

Please provide complete contact information for both the survey respondent and associated supervisor. You can also enter contact information for an alternate respondent.

### Completing the Tables

**Table 1** is for reporting outlays only.

- **Outlays** reported in this survey should be consistent with amounts in The Budget of the United States Government. The same definitions are used for both.

Outlays represent the amounts for checks issued, cash payments, and electronic transfer of funds made to liquidate a federal obligation during a given period, regardless of when the funds were appropriated.

The amounts shown for each year reflect outlays for that year regardless of when the funds were originally authorized or received and regardless of whether or not they were originally appropriated, received, or identified in the agency’s budget specifically for research, development, or R&D plant.

- Outlays cover all transactions that occurred in a given fiscal year, and those estimated for the next two fiscal years (for Volume 67, only the next fiscal year).
- Include all federal funds available to an agency that the agency received or expects to receive from direct appropriations, trust funds, and special account receipts, corporate income, fees and charges, funds appropriated by the Congress, and other federal sources.
- Include the full costs of R&D, both specific project costs and overhead costs. Include for both intramural and extramural R&D programs: costs of planning and administering of R&D, laboratory overhead, pay of military personnel, and departmental administration, **and include funds your agency transferred to other agencies for R&D.**
- Outlays for R&D performed for an agency in foreign countries include all funds available to the agency for this purpose.

- **Do not include funds your agency received from another federal agency.** The transferring agency will report those funds. Similarly, a subdivision of an agency reports the funds it transfers to another subdivision within that agency as its own.

- **R&D:** Research and experimental development (R&D) activities are defined as creative and systematic work undertaken in order to increase the stock of knowledge—including knowledge of people, culture, and society—and to devise new applications using available knowledge.

For reporting R&D activities, include the following:

- Administrative expenses for R&D, such as the operating costs of research facilities and equipment and other overhead costs.

Exclude:

- Investments in physical assets such as major equipment and facilities that support R&D programs. These investments should generally be reported under R&D plant (see Tables 1, 1B, 2, 9, 11, 11A, 11B, and 13).
- Routine product testing, quality control, collection of general-purpose statistics, routine monitoring, and evaluation of an operational program (when that program is not R&D).
- Training of scientific and technical personnel should be reported as conduct of education and training.

- **R&D plant:** R&D plant is defined as spending on both R&D facilities and major equipment as defined in Office of Management and Budget (OMB) Circular A-11 Section 84 (Schedule C) and includes physical assets, such as land, structures, equipment, and intellectual property (e.g., software or applications) that have an estimated useful life of two years or more. Reporting for R&D plant includes the purchase, construction, manufacture, rehabilitation, or major improvement of physical assets regardless of whether the assets are owned or operated by the Federal Government, States, municipalities, or private individuals. The cost of the asset includes both its purchase price and all other costs incurred to bring it to a form and location suitable for use.

For reporting construction of R&D facilities and major moveable R&D equipment, include the following:

- Construction of facilities that are necessary for the execution of an R&D program. This may include land, major fixed equipment, and supporting infrastructure such as a sewer line, or housing at a remote location. Many laboratory buildings will include a mixture of R&D facilities and office space. The fraction of the building that is considered to be R&D may be calculated based on the percentage of square footage that is used for R&D.
- Acquisition, design, or production of major moveable equipment, such as mass spectrometers, research vessels, DNA sequencers, and other moveable major instrumentation for use in R&D activities.
- Programs of \$1 million or more that are devoted to the purchase or construction of R&D major equipment.

Exclude the following:

- Construction of other non-R&D facilities.

- Minor equipment purchases, such as personal computers, standard microscopes, and simple spectrometers (report these costs under total R&D, not R&D Plant).

Obligations for **foreign R&D plant** are limited to federal funds for facilities that are located abroad and used in support of foreign R&D.

## **Tables 1A and 1B—Narratives for Reconciliation of R&D Outlays and R&D Plant Outlays with Amounts Reported to OMB**

Office of Management and Budget (OMB) Circular A-11, also called MAX Schedule C, is a mandatory report that collects data from federal agencies for the Budget of the U.S. Government. In this report, federal agencies provide OMB with data on their outlays for R&D by type of R&D and R&D plant. However, the information provided does not provide as much detail on type of R&D or performers as the Federal Funds Survey, and it provides no information on fields of science and engineering or geographic distribution. Because the Federal Funds Survey and the OMB report use the same definitions and guidelines, certain items, such as Total Outlays for R&D and Total Outlays for R&D Plant or Facilities, should be the same.

If there are differences between the R&D data submitted for the Federal Funds Survey and for the OMB report, each reporting agency or subdivision should provide an explanation for differences in total R&D and total R&D plant outlays.

**Table 2** is for reporting obligations only.

- **R&D, by Type of R&D:** Type of R&D has three components: basic research, applied research, and experimental development. If you cannot assign a project's obligations precisely across the three categories, please use your best judgment to allocate the obligations. Or, assign the obligations to the category most appropriate to the type of work you are funding.
  - **Basic research:** Basic research is defined as experimental or theoretical work undertaken primarily to acquire new knowledge of the underlying foundations of phenomena and observable facts. Basic research may include activities with broad or general applications in mind, such as the study of how plant genomes change, but should exclude research directed towards a specific application or requirement, such as the optimization of the genome of a specific crop species.
  - **Applied research:** Applied research is defined as original investigation undertaken in order to acquire new knowledge. Applied research is, however, directed primarily towards a specific practical aim or objective.
  - **Experimental development:** Experimental development is defined as creative and systematic work, drawing on knowledge gained from research and practical experience, which is directed at producing new products or processes or improving existing products or processes. Like research, experimental development will result in gaining additional knowledge.

For reporting experimental development activities, include the following:

- The production of materials, devices, and systems or methods, including the design, construction, and testing of experimental prototypes.
- Technology demonstrations, in cases where a system or component is being demonstrated at scale for the first time, and it is realistic to expect additional refinements to the design (feedback R&D) following the demonstration. However, not all activities that are identified as "technology demonstrations" are R&D.

## Exclude:

- User demonstrations where the cost and benefits of a system are being validated for a specific use case. This includes low-rate initial production activities.
- Pre-production development, which is defined as non-experimental work on a product or system before it goes into full production, including activities such as tooling and development of production facilities. For example, exclude activities and programs that are categorized as “Operational Systems Development” in DOD’s budget activity structure. Activities and programs of this type should generally be reported as investments in other major equipment.

- **Obligations** reported in this survey should be consistent with amounts in The Budget of the United States Government. The same definitions are used for both.

Obligations represent the amounts for orders placed, contracts awarded, services received, and similar transactions during a given period, regardless of when the funds were appropriated and when future payment of money is required.

- Include direct appropriations, trust funds, special account receipts, corporate income, fees and charges, funds appropriated by the Congress, and other federal sources.
- Report the year of the obligation regardless of when the funds were originally authorized, received, appropriated, or identified as research, development, or R&D plant.
- Include the full costs of R&D, both specific project costs and overhead costs. Include for both intramural and extramural R&D programs: costs of planning and administering R&D, laboratory overhead, pay of military personnel, departmental administration, **and include funds your agency transferred to other agencies for R&D.**
- Obligations for R&D performed for an agency in foreign countries include all funds available to the agency for this purpose.
- **Do not include funds your agency received from another federal agency.** The transferring agency will report those funds. Similarly, a subdivision of an agency reports the funds it transfers to another subdivision within that agency as its own.

- See other definitions under Table 1.

**Tables 3, 4, and 5** are for reporting obligations for research by fields of science and engineering. Please do not complete Table 5 for Volume 67.

Please make every effort to allocate obligations to a specific discipline rather than use the “other” category. If specific allocation is not feasible, however, obligations reported under the other category should be identified in an explanatory note. In reporting obligations for activities concerned with interdisciplinary studies, funds must not be double-counted.

- **Fields of Science and Engineering** in this survey consist of eight broad field categories, each consisting of a number of detailed fields. The broad fields are computer sciences and mathematics, engineering, environmental sciences, life sciences, physical sciences, psychology, social sciences, and other sciences not elsewhere classified. The following list presents the detailed fields grouped under each of the broad fields, together with illustrative disciplines of detailed fields.

“Other” includes

- projects within a broad field
- single-discipline projects for which a separate field has not been assigned

The illustrative disciplines are intended to be guidelines, not sharp definitions. Research in biochemistry, for example, might be reported as biological, agricultural, or medical, depending on the focus of the project. Human biochemistry would be classified under biological, but animal biochemistry or plant biochemistry would fall under agricultural.

Do not report research under more than one field. No double counting is intended or allowed.

## ■ **Computer sciences and mathematics**

- **Computer sciences:** Computer sciences, data manipulation, data storage, design or development of computer capabilities, information sciences, information systems, programming languages, systems analysis
- **Mathematics:** Algebra, analysis, applied mathematics, foundations, geometry, logic, numerical analysis, statistics, topology
- **Other computer sciences and mathematics**

## ■ **Engineering**

- **Aeronautical engineering:** Aerodynamics
- **Astronautical engineering:** Aerospace, space technology
- **Chemical engineering:** Petroleum, petroleum refining process
- **Civil engineering:** Architectural engineering, environmental engineering, hydraulic engineering, hydrologic engineering, marine engineering, sanitary engineering, structural engineering, transportation
- **Electrical engineering:** Communications engineering, electronic engineering, power engineering
- **Mechanical engineering:** Engineering mechanics
- **Metallurgy and materials engineering:** Ceramic engineering, mining, textile engineering, welding
- **Other engineering:** Agricultural engineering, bioengineering, biomedical engineering, industrial engineering, management engineering, nuclear engineering, ocean engineering, systems engineering

## ■ **Environmental sciences**

- **Atmospheric sciences:** Aeronomy, extraterrestrial atmospheres, meteorology, solar science, terrestrial atmospheres, weather modification
- **Geological sciences:** Cartography, engineering geophysics, general geology, geodesy, geomagnetism, gravity, hydrology, inorganic geochemistry, isotopic geochemistry, laboratory geophysics, organic geochemistry, paleomagnetism, paleontology, physical geography, seismology
- **Oceanography:** Biological oceanography, chemical oceanography, marine geophysics, physical oceanography
- **Other environmental sciences**

## ■ **Life sciences**

Report under oceanography if study is about life in the sea or other bodies of water.

- **Agricultural sciences:** Agronomy, animal sciences, fish and wildlife, food science and technology, forestry, general agriculture, horticulture, phytopathology, phytoproduction, plant sciences, soils and soil science
- **Biological sciences (excluding environmental biology):** Anatomy, biochemistry, biology, biometry, biophysics, biostatistics, botany, cell biology, entomology, genetics, microbiology, neuroscience (biological), nutrition, parasitology, physiology, zoology
- **Environmental biology:** Biotic community, ecosystem sciences, evolutionary biology, limnology, physiological ecology, population biology, population ecology, systematic biology
- **Medical sciences:** Dentistry, internal medicine, neurology, obstetrics and gynecology, ophthalmology, otolaryngology, pathology, pediatrics, pharmacology, pharmacy, preventive medicine, psychiatry, radiology, surgery, veterinary medicine
- **Other life sciences**
- **Physical sciences**
  - **Astronomy:** Gamma-ray astronomy, laboratory astrophysics, neutrino astronomy, optical astronomy, radio astronomy, theoretical astrophysics, X-ray astronomy
  - **Chemistry:** Inorganic chemistry, organic chemistry, organometallic chemistry, physical chemistry
  - **Physics:** Acoustics, atomic physics, condensed-matter physics, elementary particle physics, molecular physics, nuclear structure, optics, plasma physics
  - **Other physical sciences**
- **Psychology** deals with behavior, mental processes, and individual and group characteristics and abilities. Psychology in this survey is divided into three categories: biological aspects, social aspects, and other psychological sciences. Examples of the disciplines under each of these fields are as follows:
  - **Biological aspects:** Animal behavior, clinical psychology, comparative psychology, ethology, experimental psychology
  - **Social aspects:** Development, educational, engineering psychology, industrial psychology, personality, personnel, social psychology, testing, vocational psychology
  - **Other psychological sciences**
- **Social sciences**
  - **Anthropology:** Applied anthropology, archaeology, cultural anthropology, ethnology, personality, social anthropology
  - **Economics:** Agricultural economics, econometrics, economic statistics, economic systems and development, economic theory, history of economic thought, industrial economics, international economics, labor economics, macroeconomics, microeconomics, public finance and fiscal policy
  - **Political science:** Area studies, regional studies, comparative government, history of political ideas, international law, international relations, national political and legal systems, political theory, public administration
  - **Sociology:** Comparative sociology, complex organizations, culture and social structure, demography, group interactions, historical sociology, social problems, social welfare, sociological theory

- **Other social sciences:** Linguistics, research in education, research in history, research in law (e.g., how legal systems and practices impact society), socioeconomic geography
- **Other sciences not elsewhere classified:** Interdisciplinary studies, multidisciplinary studies, studies that cannot be classified in one of the fields of science above

**Tables 6, 7, and 8** cover reporting obligations by performer and type of R&D. Please do not complete Table 8 for Volume 67.

(NOTE: The instructions for Table 6A follow this instruction. The instructions for Tables 6B and 6C follow the instructions for Table 11.)

Personnel costs are a subset of Federal Intramural costs. Personnel costs are for identification of obligations for intramural personnel services and related allowances. Such obligations cover salaries for scientists, engineers, and other intramural support personnel, including dedicated planning and administrative personnel.

Report obligations to business or industrial firms, universities and colleges, and nonprofit institutions separately from the obligations to FFRDCs administered by those performers.

Definitions for these tables include:

- **Businesses or industrial firms:** This category of performer includes business (for-profit).
- **Federally Funded Research and Development Centers (FFRDCs)** are R&D-performing organizations that are exclusively or substantially financed by the federal government. Your department or agency may sponsor or otherwise support an FFRDC in support of R&D that furthers your mission. The survey requests that you report FFRDC obligations separately for the type of organization that administers the FFRDC—industrial firm, university or college, or nonprofit institution. To view the list of current FFRDCs, please see the Master Government List of Federally Funded R&D Centers at <https://www.nsf.gov/statistics/ffrdclist/>, and for more information, the FFRDC general notes at <https://www.nsf.gov/statistics/ffrdclist/#gennotes>. (Additional information concerning FFRDCs is found in the reporting guidelines for Table 9.)
- **Foreign performers:** This category includes citizens, organizations, universities and colleges, and governments of other nations. Also, include international organizations located outside the United States who are performing R&D. In most cases, foreigners performing R&D in the United States are not reported here. Excluded from the survey are U.S. agencies, organizations, or citizens performing R&D abroad for the federal government. An exception in the past was made in the case of U.S. citizens performing R&D abroad under special foreign-currency funds; these activities were included under the foreign performers category but have not been collected since the mid-1990s. Examples of foreign performers include: North Atlantic Treaty Organization (NATO), United Nations Educational, Scientific, and Cultural Organization (UNESCO), World Health Organization (WHO).

Care should be taken to report foreign performance only once. For example, if a foreign performer is an educational institution, obligations to that institution should be reported only under foreign performance and not also under universities and colleges.

- **Intramural performers:** This category includes obligations for R&D performed by federal employees either in your federal department or agency or elsewhere. This

category also includes costs associated with your department’s or agency’s planning and administration of R&D for your intramural programs and extramural contract programs (i.e., programs conducted by nonfederal R&D performers). The management and distribution of funds for R&D grants to extramural performers should not be included as R&D. For the R&D funds transferred to another federal agency, try to report the funds where they will ultimately be performed—inside or outside the federal government. Use this category if the other federal agency’s employees are expected to perform the R&D. If the R&D will eventually be conducted at university and colleges, nonprofit institutions, or businesses, use the appropriate category for these extramural R&D performers. This category also includes the costs of supplies and equipment for the intramural R&D.

- **Nonprofit institution performers:** This category includes private organizations, other than educational institutions, whose net earnings do not benefit either private stockholders or individuals and other private organizations organized for the exclusive purpose of turning over their entire net earnings to such nonprofit organizations. Examples of nonprofit institutions include foundations, trade associations, charities, and research organizations.
- **Performer:** An intramural group or organization carrying out an operational function or an extramural organization or a person receiving support or providing services under a contract or grant.
- **Personnel costs:** The survey items on performers ask you to break out the portion of federal intramural obligations for personnel costs. Personnel costs include salaries of both federal employees who perform R&D as well as federal employees who monitor or oversee R&D projects, both intramural and extramural R&D contracts.

If your budget does not include personnel costs as a line item, please estimate these R&D personnel costs and include them in your federal intramural R&D obligations.

Examples of R&D personnel include the following: scientists, engineers, lab technicians, computer programmers, and dedicated planning and administrative personnel.

- **State and local government:** This category of performer includes R&D obligations to state and local government agencies regardless of who actually performs the R&D. That is, use this category to report both R&D performed by state and local agencies and R&D subcontracted by a state or local agency to another organization. Exceptions:

- Report state and local universities and colleges under Universities and colleges.
- Report agricultural experiment stations under Universities and colleges.

- **Universities and colleges:** This category of performer includes institutions that engage primarily in providing resident and/or accredited instruction for a not less than a 2-year program above the secondary school level that is acceptable for full credit toward a bachelor’s degree or that provide not less than a 1-year program of training above the secondary school level that prepares students for gainful employment in a recognized occupation. Included are colleges of liberal arts; schools of arts and sciences; professional schools, as in engineering and medicine, including affiliated hospitals and associated research institutes; and agricultural experiment stations. Other examples of universities and colleges include community colleges, four-year colleges, universities, and freestanding professional schools (medical schools, law schools, etc.).

**Table 6A** provides for reporting additional information on the obligations to federal intramural performers for R&D during FY 2017. This table requires the breakdown of federal

intramural obligations into three types of obligations: planning and administration of intramural and extramural R&D programs, interagency transfers, and federal laboratories. These categories are to be considered mutually exclusive; if any obligations fall in multiple categories or cannot be disaggregated, estimate the amount of the total that should be allocated to each category. The total should match the last column in the first line of Table 6. Do not double-count obligations between multiple categories.

- **Planning and Administration of Intramural and Extramural R&D Programs:** Include the costs of intramural staff within your agency or department for the planning and administration of R&D projects, regardless of whether the R&D projects themselves are intramural or extramural. Exclude the costs of extramural staff for planning and administration of extramural R&D projects funded by your agency or department. The costs associated with the management and distribution of funds for R&D grants to extramural performers should not be included as R&D.
- **Interagency Transfers:** Include all obligations for which the initial recipient of the transfer was either a laboratory operating under the oversight of another federal agency or another federal agency for use by a specific federal laboratory under that agency's oversight.
- **Federal Laboratories:** A federal laboratory is a facility or group of facilities owned, leased, or otherwise used by a federal agency, a substantial purpose of which is the performance of R&D by employees of the federal government. Each agency should report its total obligations for all federal laboratories that the agency supports. If any of the entities to which your agency obligated federal intramural R&D funds can be considered a part of multiple laboratories (e.g., entities that receive funding from multiple accounting units or operate across multiple laboratory sites or as virtual entities), categorize the entity as a part of only one laboratory using the selection criteria of your choice. Do not double-count obligations to these entities by listing the same obligations under multiple laboratories.

**Tables 6B and 6C**—The instructions for Tables 6B and 6C follow the instructions for Table 11.

**Table 9** provides for reporting additional information on FY 2017 R&D and R&D plant obligations to FFRDCs. This table requires the breakdown of obligations for R&D (Table 6) and R&D Plant (Table 11) reported to individual FFRDCs administered by industrial firms or businesses, universities and colleges, or nonprofit institutions, by each FFRDC listed. Each agency should report obligations to each FFRDC it supports, even if the FFRDC is sponsored by another agency. Agencies may not unilaterally delete organizations classified as FFRDCs from the list or add organizations to it.

**Table 10** provides for reporting obligations for basic research and R&D to foreign performers by geographic area and country.

**Table 11** provides for reporting obligations for R&D plant by the performer of R&D that the R&D plant supports, regardless of the plant's ownership or location. Definitions that were provided earlier in these instructions for R&D plant and performers apply to these tables.

The performer of R&D determines the classification of R&D plant obligations. Report obligations to business or industrial firms, universities and colleges, and nonprofit institutions separately from the obligations to FFRDCs administered by those performers.

**Tables 6B, 6C, 11A, and 11B—Narratives for Reconciliation of R&D Obligations and R&D Plant Obligations with the NSF Survey of Federal Science and Engineering Support to Universities, Colleges, and Nonprofit Institutions (Federal S&E Support Survey)**

- Table 6B—Universities and Colleges excluding FFRDCs R&D Obligations
- Table 6C—Nonprofit Institutions excluding FFRDCs R&D Obligations
- Table 11A—Universities and Colleges excluding FFRDCs R&D Plant Obligations
- Table 11B—Nonprofit Institutions excluding FFRDCs R&D Plant Obligations

Completion of Tables 6B, 6C, 11A, and 11B is optional.

The following agencies have been requested to provide data to the Federal S&E Support Survey (formerly known as the CASE survey): the Departments of Agriculture, Commerce, Defense, Education, Energy, Health and Human Services, Homeland Security, Housing and Urban Development, the Interior, Labor, and Transportation; the Agency for International Development; the Appalachian Regional Commission; the Environmental Protection Agency; the National Aeronautics and Space Administration; the National Archives and Records Administration; the National Science Foundation; the Nuclear Regulatory Commission; the Office of Justice Programs; and the Social Security Administration.

These agencies have been requested to provide specific obligations data to NSF in response to the reporting system established in 1965 by the Committee on Academic Science and Engineering (CASE) of the Federal Council for Science and Technology; this survey is referred to in these instructions as the Federal S&E Support Survey. The requested data cover obligations for R&D and R&D plant to universities, colleges, and nonprofit institutions, as well as data on other activities. In general, the concepts and definitions used in the Federal S&E Support Survey conform to the general guidelines in the Federal Funds Survey. Thus, for agencies participating in both surveys, overall totals for R&D and R&D plant to universities, colleges, and nonprofit institutions should be essentially the same. Where differences appear in data reported for the two surveys, each reporting agency or subdivision should provide an explanation.

Different totals can sometimes result from the fact that reporting for the Federal Funds Survey and for the Federal S&E Support Survey is accomplished in different ways. For the Federal Funds Survey, each agency includes in its reporting the amounts transferred to other agencies for furtherance of its own purposes; the receiving agencies do not report funds transferred to them. In the Federal S&E Support Survey, however, the data are reported by the agencies in terms of individual performing institutions, and because of this requirement, only the agency that makes the final distribution of the funds can readily determine where the transferred or reimbursable funds are obligated. For this reason, agencies reporting to the Federal S&E Support Survey include funds received from other agencies and exclude funds transferred to other agencies, the reverse of the procedure for the Federal Funds Survey.

**Tables 12 and 13:** Definitions that were provided earlier in these instructions for R&D, R&D plant, and performers apply to these tables.

General instructions include:

- State locations are requested only for the 11 largest R&D departments or agencies: the Departments of Agriculture, Commerce, Defense, Energy, Health and Human Services, Homeland Security, the Interior, and Transportation; the Environmental

Protection Agency; the National Aeronautics and Space Administration; and the National Science Foundation. Report the principal location where the work is performed by the primary contractor, grantee, or intramural organization. If location information is not available, assign the obligations to the state, other area, or office abroad where the headquarters of the U.S. primary contractor, grantee, or intramural organization is located.

- Both intramural and extramural obligations are required. The extramural obligations are to be reported in terms of prime contracts or grants.
- The amounts reported in these tables for each performer should add to the totals reported for Tables 6 and 11.
- R&D obligations to foreign performers or R&D plant obligations in support of foreign performers should not be reported here. See Table 10.

Specific instructions include:

- In Table 12, the obligations for R&D should be provided as a combined amount.
- Table 13 is to be used to report the geographic distribution of FY 2017 obligations for R&D plant by state or other area and performer.

**Tables 14, 15, and 16:** Definitions for basic research, applied research, total research, universities and colleges, and fields of science and engineering that were provided for Tables 3, 4, and 5 in these instructions apply to these tables also. Please do not complete Table 16 for Volume 67.

- Obligations for basic, applied, and total research performed at universities and colleges (excluding FFRDCs) by field of science and engineering are requested only for 7 departments or agencies: the Departments of Agriculture, Defense, Energy, Health and Human Services, and Homeland Security; the National Aeronautics and Space Administration; and the National Science Foundation.
- The total obligations reported in Tables 14 and 15 must equal obligations for basic research, applied research, and the combined obligations for basic and applied research reported for universities and colleges, excluding FFRDCs, of Tables 6 and 7.

R&D Plant	FY 2017
Amount reported in Table 11 for Nonprofit Institutions Excluding FFRDCs (Read Only)	
Amount reported for R&D Plant to Nonprofit Institutions (total for all Institutions) in the Federal S&E Support Survey	
DIFFERENCE (Read Only)	

Key: FFRDCs = Federally funded research and development centers.

Your agency's total for NSF's Federal Funds and Federal S&E Support Survey can differ if you transfer R&D plant funding to other federal agencies or receive R&D plant funding from other agencies.

	<b>Federal Funds Survey</b>	<b>Federal S&amp;E Support Survey</b>
Focus of the survey questions	R&D plant obligations funded by your agency	Obligations for R&D performing institutions (Note: Only the federal agency directly providing R&D plant funding knows which institutions are performing the R&D)
How amounts are treated for R&D plant funds transferred to other federal agencies	Included	Excluded
How amounts are treated for R&D plant funds transferred from other federal agencies	Excluded	Included

Please enter an explanation of any R&D Plant Obligations differences between the two reports.

TOTAL								

Please use the space below to add explanations for data reported in this table.

Key: FFRDCs = Federally funded research and development centers.

"Other areas" includes U.S. territories other than Puerto Rico.

"Offices abroad" includes R&D performed or administered in foreign countries by the U.S. government.

Footnotes:

- 1 The Federal Intramural column total should equal the Total R&D amount for Federal Intramural in Table 6.
- 2 The Businesses Excluding FFRDCs column total should equal the Total R&D amount for Businesses Excluding FFRDCs in Table 6.
- 3 The FFRDCs Administered by Industrial Firm column total should equal the Total R&D amount for FFRDCs Administered by Industrial Firms in Table 6.
- 4 The Universities and Colleges Excluding FFRDCs column total should equal the Total R&D amount for Universities and Colleges Excluding FFRDCs in Table 6.
- 5 The FFRDCs Administered by Universities and Colleges column total should equal the Total R&D amount for FFRDCs Administered by Universities and Colleges in Table 6.
- 6 The Nonprofit Institutions Excluding FFRDCs column total should equal the Total R&D amount for Nonprofit Institutions Excluding FFRDCs in Table 6.
- 7 The FFRDCs Administered by Nonprofit Institutions column total should equal the Total R&D amount for FFRDCs Administered by Nonprofit Institutions in Table 6.
- 8 The State and Local Governments column total should equal the Total R&D amount for State and Local Governments in Table 6.

**Final Question for All Respondents**

Do the obligations reported on this survey include appropriated funds only?

- Yes, includes appropriated funds only.
- No, includes appropriated funds, reimbursable obligations, fees and charges, or other sources.
