General Instructions

- Please answer the survey using the same data for research and development (R&D) that your agency submitted to the Office of Management and Budget (OMB) for FY 2020 (1 October 2019 through 30 September 2020) as per OMB Circular A-11, Section 84 (<https://www.whitehouse.gov/wp-content/uploads/2018/06/s84.pdf>).
- In FY 2020, a series of supplemental appropriations bills were passed, starting in March 2020, in response to the COVID-19 pandemic: the Coronavirus Preparedness and Response Supplemental Appropriations Act, 2020 (H.R. 6074, 6 March 2020), the Families First Coronavirus Response Act (H.R. 6201, 18 March 2020), the Coronavirus Aid, Relief, and Economic Security Act (H.R. 748, 27 March 2020), and the Paycheck Protection Program and Health Care Enhancement Act (H.R. 266, 24 April 2020). S&E funded through these Acts are collectively termed here as stimulus funding. Report separately any funds received from the Coronavirus, Aid, Relief, and Economic Security Act and any other pandemic-related supplemental appropriations (i.e., “Stimulus”) from regular appropriations (i.e., “Non-Stimulus”).
- Report for all obligations in terms of the immediate recipient, whether or not the funds obligated were later subcontracted. Obligations represent the amounts for orders placed, contracts awarded, services received, and similar transactions during a given period, regardless of when the funds were appropriated and when future payment of money is required.
 - Do not include funds your agency transferred to other agencies; the receiving agency will report for these funds.
 - Include funds your agency received from another federal agency.
- Please complete a separate entry for each institution and consortium receiving funding in the specified fiscal year.
- Enter the FICE code and institution name for each institution or consortium receiving the funding. Find the FICE code by searching the survey codebook at https://www.nsf-surveys.net/FedSupport/help/download_codebook.aspx

If you cannot find a FICE code for a given academic institution or consortium, please write in as much identifying information (EIN, DUNS ID, address, city, state, zip code, telephone, website, etc.) as you have for the institution at the bottom of the page. This will help us to identify the institution for addition to the survey codebook.

Data for Academic Institutions and Consortia

- Include in the data for each academic institution all of its departments, bureaus, offices, and other components (medical schools, agricultural experiment stations, research institutes, computer centers, etc.).
- Please provide the amount of funding given to the academic institution or consortium in each of the applicable categories of support: R&D; fellowships, traineeships, and training grants; R&D plant; facilities and equipment for instruction in S&E; general support for S&E; and other S&E activities. See definitions below.

Data for Nonprofit Institutions and Consortia

- Please provide the amount of funding given to the institution or consortium in each of the two applicable categories of support for nonprofit institutions and consortia—research and development (R&D) and R&D plant ONLY. See definitions below.
- Do not include other types of science and engineering (S&E) support when reporting obligations to nonprofit institutions and nonprofit consortia.

Definitions of Categories of Support

Research and development (R&D) activities are defined as creative and systematic work undertaken in order to increase the stock of knowledge—including knowledge of people, culture, and society—and to devise new applications using available knowledge.

For reporting R&D activities, include the following:

- Administrative expenses for R&D, such as the operating costs of research facilities and equipment and other overhead costs.

Exclude:

- Investments in physical assets such as major equipment and facilities that support R&D programs. These investments should generally be reported under R&D plant.
- Routine product testing, quality control, collection of general-purpose statistics, routine monitoring, and evaluation of an operational program (when that program is not R&D). Spending of this type should generally be reported as non-investment activities.

Fellowships, traineeships, and training grants include all fellowship, traineeship, and training grant programs that are directed primarily toward the development and maintenance of scientific and technical manpower.

Excluded are projects that support research and educational institutes, seminars, and conferences, such as teacher training activities provided through teacher institutes, short courses, research participation, and in-service seminars; activities aimed at the development of educational techniques and materials for use in S&E training; and programs that provide special opportunities for increasing the scientific knowledge and experience of precollege and undergraduate students. These activities are either to be reported under other S&E activities or not reported if they are not S&E related.

R&D plant is defined as materials for use in R&D activities including

- R&D facilities;
- intellectual property (e.g., software or applications);
- major fixed equipment, such as reactors, wind tunnels, and particle accelerators; and
- major moveable equipment, such as mass spectrometers, research vessels, DNA sequencers, and other major moveable instruments.

Amounts include acquisition of, construction of, major repairs to, or alterations in structures, works, equipment, facilities, or land for use in R&D activities at federal or nonfederal installations, and housing at remote locations.

Excluded from the R&D plant category are

- costs of expendable or movable equipment (e.g., simple spectrometers, standard microscopes), personal computers, and office furniture and equipment; and
- costs of predesign studies (e.g., those undertaken before commitment to a specific facility).

These excluded costs are reported under “total conduct of research and development.”

If the R&D facilities are a larger facility devoted to other purposes as well, the funds should be distributed among the categories of support involved as appropriate. In general, another category that could be involved is facilities and equipment for instruction in S&E.

Facilities and equipment for instruction in S&E includes all programs whose principal purpose is to provide support for construction, acquisition, renovation, modification, repair, or rental of facilities, land, works, or equipment for use in instruction in science and engineering. If the instructional facilities are part of a larger facility devoted to other purposes as well, the funds should be distributed among the support involved as appropriate. In general, the other category most likely to be involved is R&D plant.

General support for science and engineering includes activities that provide support for nonspecific or generalized purposes related to scientific research and education. Such projects are generally oriented toward academic departments, institutes, or institutions as a whole. “General support” implies a spectrum of varying types of support. At one extreme is support provided without any specification of purpose other than that funds be used for scientific activities. Another kind of general support is to be found in projects that provide funds for an activity within a specified field of science and engineering but without specification of explicit purpose. The distinguishing feature of general support for science and engineering projects is that they permit a significant measure of freedom as to purpose (research, faculty support, education, institutional support, etc.).

It is intended that among the projects to be reported under this category are projects awarded through the following agency programs:

- NIH Minority Biomedical Research Support for Undergraduate Colleges

- NIH Minority Biomedical Support Grants

Other programs consistent with the above guidelines may also be reported under this category.

Other science and engineering activities includes all academic S&E activities that cannot meaningfully be assigned to one of the above categories. Among the types of activities to be included in this category are support for scientific conferences and symposia, teacher institutes, and activities aimed at increasing the scientific knowledge of precollege and undergraduate students.

Contact Information

Please supply the name and contact information for the person submitting the data and his or her supervisor. Entering an alternate point of contact (POC) is optional.

* Required (If you enter alternate POC information, first name, last name, telephone, and e-mail are required.)

Primary Point of Contact

First name:* _____ Middle initial: _____
 Last name:* _____
 Title: _____
 Telephone:* _____ Ext.: _____
 Fax: _____
 E-mail address:* _____
 Street address 1: _____
 Street address 2: _____
 City: _____ State: _____
 Zip: _____

Alternate Point of Contact (Optional)

First name: _____ Middle initial: _____
 Last name: _____
 Title: _____
 Telephone: _____ Ext.: _____
 Fax: _____
 E-mail address: _____

Supervisor Information

First name:* _____ Middle initial: _____
 Last name:* _____
 Title: _____
 Telephone:* _____ Ext.: _____
 E-mail address:* _____

Academic Institution and Consortium Data

Please report your agency’s science and engineering (S&E) obligations to this institution. Please report actual dollars for all amounts.

Report separately any funds received from the Coronavirus, Aid, Relief, and Economic Security Act plus any other pandemic-related supplemental appropriations (i.e., “Stimulus”) from regular appropriations (i.e., “Non-Stimulus”).

Academic institutions—Institutions that engage primarily in providing resident and/or accredited instruction for a not less than a 2-year program above the secondary school level that is acceptable for full credit toward a bachelor’s degree or that provide not less than a 1-year program of training above the secondary school level that prepares students for gainful employment in a recognized occupation. Included are colleges of liberal arts; schools of arts and sciences; professional schools, as in engineering and medicine, including affiliated hospitals and associated research institutes; and agricultural experiment stations.

Academic consortia—Consortia are organizations formed by the membership of a number of institutions from one or more types of performers (i.e., academic or nonprofit) in order to promote and support efforts to enhance knowledge in one or more science or engineering disciplines. NSF has identified several consortia and classified them as either academic or nonprofit types based on the predominance of their membership at the time of identification.

Nonprofit Institution and Consortium Data

Please report only your agency’s research and development (R&D) obligations and R&D plant obligations to this institution. Please report actual dollars for all amounts.

Report separately any funds received from the Coronavirus, Aid, Relief, and Economic Security Act plus any other pandemic-related supplemental appropriations (i.e., “Stimulus”) from regular appropriations (i.e., “Non-Stimulus”).

Nonprofit institutions—Nonprofit institutions are private organizations, other than educational institutions, whose net earnings in no part inure to the benefit of a private stockholder or individual and other private organizations organized for the exclusive purpose of turning over their entire net earnings to such nonprofit organizations.

Nonprofit consortia—Consortia are organizations formed by the membership of a number of institutions from one or more types of performers (i.e., academic or nonprofit) in order to promote and support efforts to enhance knowledge in one or more science or engineering disciplines. NSF has identified several consortia and classified them as either academic or nonprofit types based on the predominance of their membership at the time of identification.
